Subject: Feasibility Study Data Gap Investigation, Former Arkema Manufacturing Site, Tacoma, WA;  
Water Sample Data Validation Review Summary  
Client Project No.: Not Specified  
QA/QC Solutions, LLC Project No.: 092317.1

Dear Troy:

This letter documents the results of the data validation review of the conventional parameter, metals (elements), and volatile organic compound (VOC) analyses completed on water samples associated with Feasibility Study Data Gap Investigation completed at the Former Arkema Manufacturing Site located in Tacoma, Washington. Details of the investigation completed are provided in the Feasibility Study Data Gap Investigation Work Plan, Former Arkema Manufacturing Site. (Pioneer 2017).

The data reported were validated to verify the laboratory quality assurance and quality control (QA/QC) procedures were documented and that the overall quality of the data reported is sufficient to support its intended purposes. A summary of the overall assessment of data quality, the data set, a summary of the analytical methods used to complete the chemical analyses, a summary of the data validation procedures used, and a summary of the reasons why data were qualified (including other items noted during data validation) is presented below.

### Overall Assessment of Data Quality

Overall, the data reported are of good quality and the results for the applicable QA/QC procedures that were used by the laboratory during the analysis of the samples were generally acceptable. Selected sample results required qualification during data validation because method-specific QA/QC criteria were not met; results maybe qualified for more than one reason. During data validation, the following actions were taken:

- A total of 287 results reported as detected were qualified as estimated (assigned a *J* qualifier).
- A total of 11 results reported as detected were restated as undetected (assigned a *U* qualifier).
- A total of 147 results reported as undetected (*U*) were qualified as undetected and estimated (assigned a *UJ* qualifier).
- A total of 23 results were rejected (*R*).

Analytical data that did not meet method- and/or laboratory-established control limits for applicable quality control measurements were qualified as estimated (*J or UJ*) by the laboratory or during data validation. These qualified data are usable and represent data of good quality and reasonable confidence and have an acceptable degree of uncertainty (i.e., may be less precise or less accurate than unqualified data). Analytical data that were reported as undetected (*U*) by the laboratory or that were restated as undetected (*U*) during data validation are usable. Results that were rejected during data validation should not be used for any purpose.

***\*Data users must note that results may be qualified for more than one reason. A summary of the qualified data and reasons for qualification are in Table 2.***

## Data Set

The data set consisted of 360 water samples that were collected and submitted to the laboratory and was comprised of the following types of samples:

- 160 unfiltered natural samples.
- 160 filtered (0.45 µm) natural samples.
- 6 unfiltered natural field duplicate samples.
- 6 filtered (0.45 µm) natural field duplicate samples.
- 14 trip blanks.
- 6 unfiltered equipment blank samples.
- 6 filtered (0.45 µm) equipment blank samples.

Samples were collected during the month of October and November 2017. A summary of the samples collected and the analyses completed is presented in Table 1.

***\* Several samples required multiple reanalyses and only data considered reportable during data validation were reported in the electronic data deliverables (EDDs).***

Analyses were completed by Analytical Resources, Inc. (ARI) located in Tukwila, Washington. ARI submitted 18 work orders (see Table 1 for reference) summarizing the results of the samples and associated quality control data.

## Analytical Methods

The analytical methods that were used to complete the chemical analyses included the following:

- Selected volatile organic compounds (VOCs) (i.e., chloroform, tetrachloroethene, trichloroethene, and vinyl chloride) by purge and trap and analysis by gas chromatography/mass spectrometry (GC/MS) operated in the full scan mode using U.S. EPA SW-846 Methods 5030B and 8260C, respectively (U.S. EPA 2018).
- Total dissolved solids by filtration, drying until constant weight at 180 °C, and gravimetric determination using EPA 160.1 (U.S. EPA 1983).

- Dissolved anions (e.g., bromide, fluoride, nitrite, nitrate, Orthophosphorus, sulfate, and/or chloride) by ion chromatography using EPA Method 300.0 (U.S. EPA 1993). In a few instances, sulfate was analyzed by EPA Method 375.2 (U.S. EPA 1993) using colorimetric detection to minimize matrix interferences.
- Dissolved alkalinity (as bicarbonate, carbonate, hydroxide, and total) by titration using method SM 2320 B-97 (SM 2012).
- Dissolved Organic Carbon by high temperature combustion catalytic oxidation and on-dispersive infrared detection using method SM 5310 B-00 (SM 2012).
- Total metals (i.e., arsenic, copper, lead, and nickel) by inductively coupled plasma-mass spectrometry (ICP-MS) using SW-846 Method 6020A (U.S. EPA 2018).
- Total mercury by cold vapor atomic absorption (CVAA) using SW-846 Method 7470A (U.S. EPA 2018).
- Dissolved metals (i.e., aluminum, calcium, iron, magnesium, manganese, potassium, silicon, and sodium) by filtration through 0.45 µm filter, digestion, and analysis by inductively coupled plasma-optical emission spectroscopy (ICP-OES) using U.S. EPA SW-846 Method 6020A (U.S. EPA 2018).
- Dissolved metals (i.e., arsenic, copper, lead, and nickel) by filtration through 0.45 µm filter, digestion, and analysis by inductively coupled plasma-mass spectrometry (ICP-MS) using U.S. EPA SW-846 Method 6020A (U.S. EPA 2018).
- Total mercury by filtration through 0.45 µm filter and ample preparation and analysis by cold vapor atomic absorption (CVAA) using SW-846 Method 7470A (U.S. EPA 2018).

## Data Validation Procedures

Data validation procedures included evaluating a summary of the sample results and applicable quality control results that were reported by the laboratory; this level of validation is also referred to as an abbreviated data review (equivalent to “Stage 2B” review per U.S. EPA 2009, which is equivalent to “Level EPA2B” for use with the Washington Department of Ecology EIMS database). The analytical data were validated generally following the applicable guidance and requirements:

- *Guidance on Environmental Data Verification and Validation* (U.S. EPA 2002)
- *USEPA Contract Laboratory Program, National Functional Guidelines for Superfund Organic Methods Data Review*. Final. OSWER 9240.1-45. USEPA/540/R-08/01 (U.S. EPA 2008).
- *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use*. OSWER No. 9200.1-85. EPA 540-R-08-005. (U.S. EPA 2009).
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Superfund Data Review*. Final. OSWER 9240.1-51. EPA 540-R-10-011 (U.S. EPA 2010).
- Method-specific and laboratory-established quality control requirements, as applicable.

Data validation procedures were modified to accommodate QA/QC requirements for methods (e.g., conventional parameters) that are not specifically addressed by the USEPA functional guidelines. In this

situation, method-specific and laboratory-established control limits were used, as necessary, to determine if qualification of the data was necessary. The laboratory data deliverables that were validated, if present, included the following:

- Case narratives discussing analytical problems (if any) and procedures.
- Chain-of-custody documentation to verify completeness of the data set.
- Results for applicable method blanks and field blanks to determine whether an analyte that was reported as detected in any sample was the result of possible contamination introduced at the laboratory or during field sampling, respectively.
- Results for applicable standard reference material (SRM), laboratory control sample (LCS) (i.e., blank spike), duplicate LCS, matrix spike (MS), and/or matrix spike duplicate (MSD) recoveries to assess analytical accuracy
- Results for applicable laboratory duplicate sample, duplicate LCS, and/or MSD analyses to assess analytical precision.
- Results for the field duplicate samples to provide additional information in support of the quality assurance review.
- Laboratory summaries of analytical results.

Verification of applicable laboratory calculations, transcriptions, review of instrument printouts, and review of bench sheets were not completed during the abbreviated data validation review. There may be analytical problems that could only be identified by completing a thorough review (i.e., 100-percent data validation) of all original instrument printouts and associated analytical quality control results. Verification of all possible factors that could result in the degradation of data quality was not completed nor should be inferred at this time. The laboratory case narratives did not indicate any significant problems with data that were not reviewed during data validation. The adequacy of the sampling procedures was not completed during data validation.

Performance based control limits established by the laboratory and control limits provided in the method protocols were used to evaluate data quality and determine the need for data qualification. Applicable laboratory control limits (e.g., recoveries for surrogate compounds, LCSs and LCS duplicates, and MS/MSDs) were used during data validation. Data qualifiers were assigned during data validation to both hardcopy data sheets and the EDD when applicable QA/QC limits were not met and qualification of the data was warranted. Data qualifiers were assigned following guidance specified by U.S. EPA (2002, 2009, 2008, and 2010) and the quality control requirements specified in the applicable analytical methods.

## Reasons for Data Qualification

The reasons for data qualification and a summary of the qualified data are summarized in Table 2, which included the following:

- A total of 250 results reported as detected at a concentration above the method detection limit (MDL), but less than the reporting limit (RL) were qualified as estimated (*J*).
- A total of 100 VOC results were qualified as estimated (*J or UJ*) because air bubbles were noted in all of the sample containers associated with a given

sample. The results reported for all target VOCs in the affected samples were qualified.

- A total of 85 anion results were qualified as estimated (*J or UJ*) because method-specific holding time constraints were not met.
- A total of 34 anion results were qualified as estimated (*J or UJ*) because the recovery in a MS was outside the applicable control limit.
- A total of 9 anion results were qualified as estimated (*J or UJ*) because the recovery in a LCS was outside the applicable control limit.
- One anion and one metal result were qualified as estimated (*J*) because the concentrations were greater than the upper calibration range established during analysis. The laboratory should have completed dilutions.
- One lead result was qualified as estimated (*J*) because RPD for the associate laboratory replicate analysis was above the applicable control limit
- A total of 11 VOC results were restated as undetected (*U*) because the target compound was also detected in an associated blank. In this instance, the concentration found in the sample was <5 times the concentration found in the associate blank.
- A total of 23 anion results were reported as undetected were rejected (*R*) because the recoveries in the associated matrix spikes were at 0 percent.

*\*Data users should note that results may be qualified for more than one reason (see Table 2).*

### **General Comments**

The following general comments are provided to document some, but not all, items that were identified during data validation, but did not result in qualification of any data. The following comments are for informational purposes only.

- In some instances sample coolers were received at the laboratory at a temperature above the recommended 6 °C (U.S. EPA 2017). In this situation, the samples were collected and delivered to the laboratory on the same day and the coolers did not have sufficient time equilibrate.
- In several instances, selected samples required dilutions prior to analysis (as is required by the analytical methods) to obtain concentrations that were within the linear range of the instrument and/or to minimize the effects of matrix interferences to obtain reportable results. In some instances, non-detected results were reported at elevated reporting limits.
- For the analysis of anions, data users should note the results reported may exhibit a greater degree of uncertainty (e.g., biased low or biased high) for one, or more, reasons. Samples that exhibited high concentrations of one, or more of the target anions; high mineral content; elevated hardness (or that were basic with pH of 9 to 11); elevated elemental compositions; presence of non-target ions; and, other unidentified factors likely contributed to difficulties in accurate identification and/or quantification. This is not a reflection of laboratory performance, but rather the nature of the matrix itself. Such conditions could

result in direct chromatographic coelutions of anions; concentration dependent coelutions; ionic character displacement (e.g., shifting of retention times); peak tailing resulting in under or over estimation of an anion concentration; generation of poorly shaped chromatographic peaks (e.g., non-gaussian shape) resulting in under or over estimation of an anion concentration; column overload; and, any number of other conditions.

- The laboratory encountered difficulties that were matrix-related for the analysis of some samples. Data users should refer to the case narrative for additional details. As was stated above, verification of applicable laboratory calculations, transcriptions, review of instrument printouts, and review of bench sheets were not completed. There may be analytical problems that could only be identified by completing a thorough review (i.e., 100-percent data validation). Verification of all possible factors that could result in the degradation of data quality was not completed nor should be inferred at this time.

This concludes the data validation review summary. Should you have any questions regarding the information presented herein, please contact me by telephone at 503.763.6948 or by e-mail at [jjmcateer@msn.com](mailto:jjmcateer@msn.com).

Cordially,

*QA/QC Solutions, LLC*

Notes:  
D- reported value is from a dilution  
E - concentration exceeds calibration range  
H- holding time not met  
J - estimated  
LCS - laboratory control sample  
MDL - method detection limit  
MS - matrix spike  
R - rejected  
RE1, RE2, RE3 - reanalysis (1,2, or 3)  
RL - reporting limit  
RPD - relative percent differences  
U - undetected at detection limit shown

|                                |     |
|--------------------------------|-----|
| Total results qualified "J" =  | 287 |
| Total results qualified "U" =  | 9   |
| Total results qualified "UJ" = | 147 |
| Total results qualified "R" =  | 23  |

<sup>a</sup> Summary of qualified data is for natural and field quality control samples only

<sup>b</sup>Low bias - concentration reported is exhibits low bias and the actual reporting limit or concentration may be greater than reported

<sup>c</sup>High bias - result reported exhibits high bias and the actual reporting limit or concentration may be lower than reported

<sup>d</sup>False positive - compound is likely not present

<sup>\*</sup> Data users must note that only data considered reportable during data validation has been reported. In several instances, multiple reanalyses may have been completed.

<sup>\*</sup> Data users should note that significant figures in above table are "as reported by the laboratory"; no rounding to more appropriate significant figures was completed during data validation

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Terms of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: PIONEER

Project Name: Arkema FS DG Inv

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 1750102

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? ..... YES  NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)  
Time: 1325 2.8

If cooler temperature is out of compliance fill out form 00070F

Cooler Accepted by: SF Date: 10/6/17 Time: 1325 Temp Gun ID#: D002565

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO

What kind of packing material was used? ... Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper  Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA  YES  NO

Were all bottles sealed in individual plastic bags? ..... YES  NO

Did all bottles arrive in good condition (unbroken)? ..... YES  NO

Were all bottle labels complete and legible? ..... YES  NO

Did the number of containers listed on COC match with the number of containers received? ..... YES  NO

Did all bottle labels and tags agree with custody papers? ..... YES  NO

Were all bottles used correct for the requested analyses? ..... YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA  YES  NO

Were all VOC vials free of air bubbles? ..... NA  YES  NO

Was sufficient amount of sample sent in each bottle? ..... YES  NO

Date VOC Trip Blank was made at ARI ..... NA 9/25/17

Was Sample Split by ARI :  NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: B.H. Date: 10/6/17 Time: 14:16

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 6, 2017 under ARI workorder 17J0102. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Volatiles - EPA Method SW8260C

The samples were run within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

There were no target compounds detected in the method blank.

The LCS/LCSD percent recoveries and RPD were within control limits.

### Anions - EPA Method 300.0

Select samples were received outside of holding time, and some were reanalyzed at a 100x dilution outside of the 48hr Nitrate, Nitrite, O-phos recommended holding time. These samples have been flagged with an "H" qualifier.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample PW-119+25-STI-100417(20). The matrix spike percent recoveries and duplicate RPD were within QC limits.

### Dissolved Organic Carbon - Method SM5310

The samples were analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample PW-119+25-STI-100417(20). The matrix spike percent recovery and duplicate RPD were within QC limits.

### Total Dissolved Solids - EPA Method 160.1

Pioneer Technologies Corporation

Reported:  
05-Dec-2017 12:26

The samples were analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample PW-119+25-STI-100417(20). The duplicate RPD was within QC limits.

#### Alkalinity - Method SM2320

The samples were analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The SRM percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample PW-119+25-STI-100417(20). The duplicate RPD was within QC limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- J Estimated concentration value detected below the reporting limit.
- H Hold time violation - Hold time was exceeded.
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- D The reported value is from a dilution
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

----

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**imits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**ample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

Assigned ARI Job No: 1750197

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? ..... YES  NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 4.8 3.2 1.2

Time: 1740

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: D002565

Cooler Accepted by: SF Date: 10/12/17 Time: 1740

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO

What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: NS, UE

Was sufficient ice used (if appropriate)? ..... NA  YES  NO

Were all bottles sealed in individual plastic bags? ..... YES  NO

Did all bottles arrive in good condition (unbroken)? ..... YES  NO

Were all bottle labels complete and legible? ..... YES  NO

Did the number of containers listed on COC match with the number of containers received? ..... YES  NO

Did all bottle labels and tags agree with custody papers? ..... YES  NO

Were all bottles used correct for the requested analyses? ..... YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA  YES  NO

Were all VOC vials free of air bubbles? ..... NA  YES  NO

Was sufficient amount of sample sent in each bottle? ..... YES  NO

Date VOC Trip Blank was made at ARI ..... NA 10/6/17

Was Sample Split by ARI :  NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: B-H Date: 10/13/17 Time: 6:53

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 12, 2017 under ARI workorder 17J0197. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Volatiles - EPA Method SW8260C

The samples were run within the recommended holding times.

Sample GW-3C2-1-101217-7.5-12 was reanalyzed twice at higher reporting limits due to sample concentrations exceeding the upper range of the calibrations, these analytes have been flagged with "E" qualifiers. The final reanalysis was free of "E" flags. All re-analyses were reported. No further corrective action was taken.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

There were no target compounds detected in the method blank.

The LCS/LCSD percent recoveries and RPD were within control limits.

### Anions - EPA Method 300.0

Select samples were re-analyzed outside of the recommended holding times due to the high concentration of Chloride. These samples have been flagged with an "H" qualifier.

The samples were started at a 100x dilution due to the historically high Chloride. Also due to the high Chloride as well as matrix interference some of the peaks for Nitrates may appear as non-detects.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-3C6-1R-101117-4.5-9.5-(20). The duplicate RPD were within QC limits. The matrix spike has no spike recovery for Nitrate and Bromide. This is likely due to matrix interference. The results are advisory. No corrective action was taken.

### Dissolved Organic Carbon - Method SM5310

The samples were analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

Pioneer Technologies Corporation  
5205 Corporate Ctr. Ct. SE, Ste A  
Olympia WA, 98503

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

Reported:  
30-Oct-2017 13:32

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-3C6-1R-101117-4.5-9.5-(20). The matrix spike percent recovery and duplicate RPD were within QC limits.

#### **Total Dissolved Solids - EPA Method 160.1**

The samples were analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample GW-3C6-1R-101117-4.5-9.5-(20). The duplicate RPD was within QC limits.

#### **Alkalinity - Method SM2320**

The samples were analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The SRM percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample GW-3C6-1R-101117-4.5-9.5-(20). The duplicate RPD was within QC limits.

#### **Total and Dissolved Metals - EPA Method 200.8**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A total matrix spike and duplicate were prepared in conjunction with sample GW-3D1-1-101217-4.5-12.5. The matrix spike percent recoveries were within QC limits. The duplicate has a high RPD for Lead. The results are advisory. No corrective action was taken.

A dissolved matrix spike and duplicate were prepared in conjunction with sample GW-3D1-1-101217-4.5-12.5-(20). The matrix spike percent recoveries and duplicate RPD were within QC limits.

#### **Dissolved Metals - EPA Method 6010C**

Reported:  
30-Oct-2017 13:32

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank has Iron and Sodium detected below the reporting limits, but above the method detection limits. These metals have been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

**Total and Dissolved Hg - EPA Method 7470/7471**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A total matrix spike and duplicate were prepared in conjunction with sample GW-3D1-1-101217-4.5-12.5. The matrix spike percent recovery and duplicate RPD were within QC limits.

A dissolved matrix spike and duplicate were prepared in conjunction with sample GW-3D1-1-101217-4.5-12.5-(20). The matrix spike percent recovery and duplicate RPD were within QC limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- J Estimated concentration value detected below the reporting limit.
- H Hold time violation - Hold time was exceeded.
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- D The reported value is from a dilution
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

----

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by work order or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: Pioneer

Project Name: \_\_\_\_\_

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: \_\_\_\_\_

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? ..... YES  NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 7.1 9.3

Time: 1510

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: D005206

Cooler Accepted by: [Signature] Date: 10/13/17 Time: 1510

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO

What kind of packing material was used? ... Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper  Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA  YES  NO

Were all bottles sealed in individual plastic bags? ..... YES  NO

Did all bottles arrive in good condition (unbroken)? ..... YES  NO

Were all bottle labels complete and legible? ..... YES  NO

Did the number of containers listed on COC match with the number of containers received? ..... YES  NO

Did all bottle labels and tags agree with custody papers? ..... YES  NO

Were all bottles used correct for the requested analyses? ..... YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA  YES  NO

Were all VOC vials free of air bubbles? ..... NA  YES  NO

Was sufficient amount of sample sent in each bottle? ..... YES  NO

Date VOC Trip Blank was made at ARI ..... NA

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

# Cooler Receipt Form

ARI Client: City of Des Moines

COC No(s): \_\_\_\_\_ NA

Assigned ARI Job No: 17J0329

Project Name: \_\_\_\_\_

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? \_\_\_\_\_

YES  NO

Were custody papers included with the cooler? \_\_\_\_\_

YES  NO

Were custody papers properly filled out (ink, signed, etc.) \_\_\_\_\_

YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)

Time: \_\_\_\_\_ 16.4 \_\_\_\_\_

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: 2002506

Cooler Accepted by: BF Date: 10/19/17 Time: 1047

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? \_\_\_\_\_

YES  NO

What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: NONE

Was sufficient ice used (if appropriate)? \_\_\_\_\_

NA YES  NO

Were all bottles sealed in individual plastic bags? \_\_\_\_\_

YES  NO

Did all bottles arrive in good condition (unbroken)? \_\_\_\_\_

YES  NO

Were all bottle labels complete and legible? \_\_\_\_\_

YES  NO

Did the number of containers listed on COC match with the number of containers received? \_\_\_\_\_

YES  NO

Did all bottle labels and tags agree with custody papers? \_\_\_\_\_

YES  NO

Were all bottles used correct for the requested analyses? \_\_\_\_\_

YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)...

NA YES  NO

Were all VOC vials free of air bubbles? \_\_\_\_\_

NA YES  NO

Was sufficient amount of sample sent in each bottle? \_\_\_\_\_

YES  NO

Date VOC Trip Blank was made at ARI: \_\_\_\_\_

NA

Was Sample Split by ARI: NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 13, 2017 under ARI workorder 17J0239. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Volatiles - EPA Method SW8260C

The samples were run within the recommended holding times.

Sample GW-4B2-2-101317-22.5-27.5 was reanalyzed at a higher reporting limits due to a Chloroform concentration exceeding the upper range of the calibrations, this analyte has been flagged with "E" qualifiers. The final reanalysis was free of "E" flags. All re-analyses were reported. No further corrective action was taken.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

There were no target compounds detected in the method blank.

The LCS/LCSD percent recoveries and RPD were within control limits.

### Anions - EPA Method 300.0

Select samples were re-analyzed outside of the recommended holding times due to the high concentration of Chloride. These samples have been flagged with an "H" qualifier.

The samples were started at a 100x dilution due to the historically high Chloride. Also due to the high Chloride as well as matrix interference some of the peaks for Nitrates may appear as non-detects.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-2B1-101317-3-10-(20). The matrix spike percent recoveries and duplicate RPD were within QC limits.

### Dissolved Organic Carbon - Method SM5310

The samples were analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

Pioneer Technologies Corporation

Olympia WA, 98503

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

Reported:  
31-Oct-2017 16:42

A matrix spike and duplicate were prepared in conjunction with sample GW-4B3-2-101317-17.5-27.5-(20). The matrix spike percent recovery and duplicate RPD were within QC limits.

#### **Total Dissolved Solids - EPA Method 160.1**

The samples were analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample GW-2B1-101317-3-10-(20). The duplicate RPD was within QC limits.

#### **Alkalinity - Method SM2320**

The samples were analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The SRM percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample GW-2B1-101317-3-10-(20). The duplicate RPD was within QC limits.

#### **Total and Dissolved Metals - EPA Method 200.8**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

#### **Dissolved Metals - EPA Method 6010C**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank has Iron and Sodium detected below the reporting limits, but above the method detection limits. These metals have been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

**Total and Dissolved Hg - EPA Method 7470/7471**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- J Estimated concentration value detected below the reporting limit.
- H Hold time violation - Hold time was exceeded.
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- D The reported value is from a dilution
- B This analyte was detected in the method blank.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

----

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

Limits of Liability: ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

Sample Retention Policy: Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

imits of Liability: ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

ample Retention Policy: Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: Pioneer Technologies  
 COC No(s): \_\_\_\_\_ NA  
 Assigned ARI Job No: 17J0283  
 Preliminary Examination Phase: \_\_\_\_\_

Project Name: Arkema FS DG Inv  
 Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_  
 Tracking No: \_\_\_\_\_ NA

Were intact, properly signed and dated custody seals attached to the outside of to cooler?  YES NO  
 Were custody papers included with the cooler?  YES NO  
 Were custody papers properly filled out (ink, signed, etc.)  YES NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)  
 Time: 1647 4.3 8.6 9.2  
 If cooler temperature is out of compliance fill out form 00070F  
 1 2 3 Temp Gun ID#: 1005206

Cooler Accepted by: JBW Date: 10/17/17 Time: 1405  
 Complete custody forms and attach all shipping documents

### Log-In Phase:

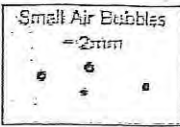

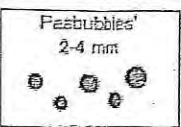

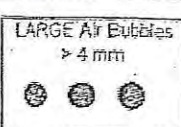

Was a temperature blank included in the cooler? YES  NO  
 What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_  
 Was sufficient ice used (if appropriate)? NA YES  NO  
 Were all bottles sealed in individual plastic bags? YES  NO  
 Did all bottles arrive in good condition (unbroken)? YES  NO  
 Were all bottle labels complete and legible? YES  NO  
 Did the number of containers listed on COC match with the number of containers received? YES  NO  
 Did all bottle labels and tags agree with custody papers? YES  NO  
 Were all bottles used correct for the requested analyses? YES  NO  
 Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES  NO  
 Were all VOC vials free of air bubbles? NA YES  NO  
 Was sufficient amount of sample sent in each bottle? YES  NO  
 Date VOC Trip Blank was made at ARI: NA 10/6/17  
 Was Sample Split by ARI:  NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 17, 2017 under ARI workorder 17J0283. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Volatiles - EPA Method SW8260C

The samples were run within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

There were no target compounds detected in the method blank.

The LCS/LCSD percent recoveries and RPD were within control limits.

### Anions - EPA Method 300.0

Select samples were re-analyzed outside of the recommended holding times due to the high concentration of Chloride. These samples have been flagged with an "H" qualifier.

The samples were started at a 100x dilution due to the historically high Chloride. Also due to high Chloride and Bromide there was a large amount of matrix interference in the samples.

Sample GW-5C16-2R-101717-(20) has odd peaks for Sulfate in the initial run and additional diluted runs. The sample has a large amount of matrix interference. The Sulfate increased with each dilution, so the analyst ran the sample using EPA method 375.2 as well as the 300.0 to verify the concentrations. All of the dilutions and methods were reported.

Method blank BFJ0479 has Sulfate detected above the reporting limit. Associated detected results and QC have been flagged with a "B" qualifier. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-3A3-1R-101617-8.2-13.2-(20) as well as its reanalyses. The matrix spike percent recoveries and duplicate RPD were within QC limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-5C16-1R-101717-(01)-(20). The matrix spike percent recoveries and duplicate RPD were within QC limits.

### Dissolved Organic Carbon - Method SM5310

The samples were analyzed within the recommended holding times.

Project Manager: Troy Bussey Jr.

Reported:  
05-Dec-2017 12:33

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

**Total Dissolved Solids - EPA Method 160.1**

The samples were analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample GW-3A3-1R-101617-8.2-13.2-(20). The duplicate RPD was within QC limits.

**Alkalinity - Method SM2320**

The samples were analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The SRM percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample GW-3A3-1R-101617-8.2-13.2-(20). The duplicate RPD was within QC limits.

A duplicate was prepared in conjunction with sample GW-5C16-1R-101717-(01)-(20). The duplicate RPD was within QC limits.

**Total and Dissolved Metals - EPA Method 200.8**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

**Dissolved Metals - EPA Method 6010C**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

**Reported:**  
05-Dec-2017 12:33

The method blank BFJ0580 has Iron and Sodium detected below the reporting limits, but above the method detection limits. These metals have been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

#### **Total and Dissolved Hg - EPA Method 7470A**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- J Estimated concentration value detected below the reporting limit.
- H Hold time violation - Hold time was exceeded.
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- D The reported value is from a dilution
- B This analyte was detected in the method blank.
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Limits of Liability: ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client

Sample Retention Policy: Unless specified by work order or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PDDAP/SEPSMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: Pioneer  
 COC No(s): \_\_\_\_\_ NA  
 Assigned ARI Job No: 17J0334  
 Preliminary Examination Phase:

Project Name: Arkema FS DG Inv  
 Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_  
 Tracking No: \_\_\_\_\_ (NA)

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES NO  
 Were custody papers included with the cooler? ..... YES NO  
 Were custody papers properly filled out (ink, signed, etc.) ..... YES NO  
 Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 5.5  
 Time: 1210

If cooler temperature is out of compliance fill out form 00070F  
 Cooler Accepted by: SF for BF Date: 10/19/17 Time: 1210  
 Temp Gun ID#: D002565

*Complete custody forms and attach all shipping documents*

### Log-In Phase:

Was a temperature blank included in the cooler? ..... YES NO  
 What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_  
 Was sufficient ice used (if appropriate)? ..... NA YES NO  
 Were all bottles sealed in individual plastic bags? ..... YES NO  
 Did all bottles arrive in good condition (unbroken)? ..... YES NO  
 Were all bottle labels complete and legible? ..... YES NO  
 Did the number of containers listed on COC match with the number of containers received? ..... YES NO  
 Did all bottle labels and tags agree with custody papers? ..... YES NO  
 Were all bottles used correct for the requested analyses? ..... YES NO  
 Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES NO  
 Were all VOC vials free of air bubbles? ..... NA YES NO  
 Was sufficient amount of sample sent in each bottle? ..... YES NO  
 Date VOC Trip Blank was made at ARI: ..... SF NA 10/16/17  
 Was Sample Split by ARI : NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: SF Date: 10/19/17 Time: 1312

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 19, 2017 under ARI workorder 17J0334. For details regarding sample receipt, please refer to the Cooler Receipt Form. Due to the salty nature of the samples many analysis needed dilutions, and multiple runs were reported.

### Volatiles - EPA Method SW8260C

The samples were run within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

There were no target compounds detected in the method blank.

The LCS/LCSD percent recoveries and RPD were within control limits.

A matrix spike and matrix spike duplicate were prepared in conjunction with sample GW -5D7-1R-101917. The matrix spike/matrix spike duplicate percent recoveries and RPD were within QC limits.

### Total and Dissolved Hg - EPA Method 7470A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW -5D7-1R-101917-(20). The matrix spike percent recovery and duplicate RPD were within QC limits.

### Total and Dissolved Metals - EPA Method 6020A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

Pioneer Technologies Corporation  
5205 Corporate Ctr. Ct. SE, Ste A  
Olympia WA, 98503

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

Reported:  
15-Nov-2017 16:38

A matrix spike and duplicate were prepared in conjunction with sample GW-5D7-1R-101917. The duplicate RPD were within QC limits. The matrix spike has a natural concentration of Arsenic that is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible. The Arsenic has been flagged with an "HC" qualifier on the matrix spike. No further corrective action was taken.

A matrix spike and duplicate were prepared in conjunction with sample GW-5D7-1R-101917-(20). The matrix spike percent recovery and duplicate RPD were within QC limits.

#### **Dissolved Metals - EPA Method 6010C**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFJ0580 has Sodium and Iron detected below the reporting limits, but above the method detection limits. The Sodium and Iron have been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-5D7-1R-101917-(20). The matrix spike percent recovery and duplicate RPD were within QC limits. The matrix spike has a Sodium concentration that exceeds the upper calibration range. The Sodium has been flagged with an "E" qualifier on the matrix spike. No further corrective action was taken.

#### **Anions - EPA Method 300.0**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

#### **Alkalinity - Method SM2320**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blanks.

The SRM percent recovery were within control limits.

A duplicate was prepared in conjunction with sample GW-5D7-1R-101917-(20). The duplicate RPD was within QC limits.

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

Reported:  
15-Nov-2017 16:38

**Total Dissolved Solids - EPA Method 160.1**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample GW-5D7-1R-101917-(20). The duplicate RPD was within QC limits.

**Dissolved Organic Carbon - Method SM5310**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

A matrix spike and duplicate were prepared in conjunction with sample GW-5D5-1-101917-(20) instead of GW-5D7-1R-101917-(20) due to lack of volume after reanalysis. The matrix spike percent recovery and duplicate RPD was within QC limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- J Estimated concentration value detected below the reporting limit.
- HC The natural concentration of the spiked analyte is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- D The reported value is from a dilution
- B This analyte was detected in the method blank.
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under P-SDDA/PSEP/PSMS protocol will be stored frozen for up to one year and then discarded.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: \_\_\_\_\_

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES NO

Were custody papers included with the cooler? ..... YES YES NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES YES NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 1 2

Time: 4.3 5.5

If cooler temperature is out of compliance fill out form 00070F 3.4 BF 10/19/17 Temp Gun ID#: D002565

Cooler Accepted by: BF Date: 10/19/17 Time: 1210

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES NO

What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA YES NO

Were all bottles sealed in individual plastic bags? ..... YES NO

Did all bottles arrive in good condition (unbroken)? ..... YES NO

Were all bottle labels complete and legible? ..... YES NO

Did the number of containers listed on COC match with the number of containers received? ..... YES NO

Did all bottle labels and tags agree with custody papers? ..... YES NO BF 10/20/17

Were all bottles used correct for the requested analyses? ..... YES NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES NO

Were all VOC vials free of air bubbles? ..... NA YES NO

Was sufficient amount of sample sent in each bottle? ..... YES NO

Date VOC Trip Blank was made at ARI ..... YES NO

Was Sample Split by ARI : NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 19, 2017 under ARI workorder 17J0344. For details regarding sample receipt, please refer to the Cooler Receipt Form. Due to the salty nature of the samples many analysis needed dilutions, and multiple runs were reported.

### Volatiles - EPA Method SW8260C

The samples were run within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

Method blank BFJ0771 has Tetrachloroethene detected below the reporting limit, but above the method detection limit. This analyte has been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS/LCSD percent recoveries and RPD were within control limits.

### Total and Dissolved Hg - EPA Method 7470A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-5C13-1-101717. The matrix spike percent recovery was within QC limits. The duplicate has a Mercury concentration  $\leq 5$  times the reporting limit, and the replicate control limit defaults to +/- the reporting limit instead of 20% of the RPD. This is likely due to matrix interference. The Mercury has been flagged with an "L" qualifier on the duplicate. No further corrective action was taken.

A matrix spike and duplicate were prepared in conjunction with sample GW-5C13-1-101717-(20). The matrix spike percent recovery was within QC limits. The duplicate has a Mercury concentration  $\leq 5$  times the reporting limit, and the replicate control limit defaults to +/- the reporting limit instead of 20% of the RPD. This is likely due to matrix interference. The Mercury has been flagged with an "L" qualifier on the duplicate. No further corrective action was taken.

### Total and Dissolved Metals - EPA Method 6020A

The samples were digested and analyzed within the recommended holding times.

Pioneer Technologies Corporation  
5205 Corporate Ctr. Ct. SE, Ste A  
Olympia WA, 98503

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Manager: Troy Bussey Jr.

Reported:  
15-Nov-2017 17:35

Initial and continuing calibrations were within method requirements.

Method blank BFJ0761 has Arsenic detected below the reporting limit, but above the method detection limit. The Arsenic has been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-5C13-1-101717. The duplicate has a Copper concentration  $\leq 5$  times the reporting limit, and the replicate control limit defaults to  $\pm$  the reporting limit instead of 20% of the RPD. The Copper has been flagged with an "L" qualifier on the duplicate. The matrix spike has a natural concentration of Arsenic that is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible. The Arsenic has been flagged with an "HC" qualifier on the matrix spike. No further corrective action was taken.

A matrix spike and duplicate were prepared in conjunction with sample GW-5C13-1-101717-(20). The duplicate RPD were within QC limits. The matrix spike has a natural concentration of Arsenic that is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible. The Arsenic has been flagged with an "HC" qualifier on the matrix spike. No further corrective action was taken.

#### **Dissolved Metals - EPA Method 6010C**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFJ0881 has Sodium and Iron detected below the reporting limits, but above the method detection limits. The Sodium and Iron have been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-5C13-1-101717-(20). The matrix spike and duplicate have a Sodium concentration that exceeds the upper calibration range. The Sodium has been flagged with an "E" qualifier. The matrix spike has a natural concentration of Potassium that is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible. The Sodium has been flagged with an "HC" qualifier on the matrix spike. This is likely due to matrix interference. No further corrective action was taken.

#### **Anions - EPA Method 300.0**

Samples GW-5C13-1-101717-(20), GW-5D8-2-101717-(20) and EB-101717-(20) were analyzed outside of holding due to the amount of holding time left after receipt. The O-phos reanalysis was analyzed outside of the recommended holding time due to hold time left during the dilution process. The samples analyzed outside of the 48 hour recommended holding time have been flagged with an "H" qualifier.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

Pioneer Technologies Corporation

Reported:  
15-Nov-2017 17:35

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-5D8-2-101717-(20). The matrix spike has low spike recovery for Fluoride, Nitrite and O-phos. The QC was reanalyzed to confirm concentrations, and both sets of QC were reported. No further corrective action was taken.

A matrix spike and duplicate were prepared in conjunction with sample GW-5C13-1-101717-(20). The matrix spike percent recoveries and duplicate RPD were within QC limits.

#### **Alkalinity - Method SM2320**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blanks.

The SRM percent recovery were within control limits.

#### **Total Dissolved Solids - EPA Method 160.1**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

#### **Dissolved Organic Carbon - Method SM5310**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

A matrix spike and duplicate were prepared in conjunction with sample GW-5C13-1-101717-(20). The matrix spike percent recovery and duplicate RPD were within QC limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- M Estimated value for a GC/MS analyte detected and confirmed by an analyst but with low spectral match parameters.
- L Analyte concentration is  $\leq 5$  times the reporting limit and the replicate control limit defaults to +/- RL instead of 20% RPD
- J Estimated concentration value detected below the reporting limit.
- HC The natural concentration of the spiked analyte is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
- H Hold time violation - Hold time was exceeded.
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- D The reported value is from a dilution
- B This analyte was detected in the method blank.
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

----

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: Pioneer

Project Name: Arkema FS DG Inv

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 17J0394

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES NO

Were custody papers included with the cooler? ..... YES NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)  
Time: 1635 9.6 8.2

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: P005206

Cooler Accepted by: BF Date: 10/20/17 Time: 1655

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES NO

What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA YES NO

Were all bottles sealed in individual plastic bags? ..... YES NO

Did all bottles arrive in good condition (unbroken)? ..... YES NO

Were all bottle labels complete and legible? ..... YES NO

Did the number of containers listed on COC match with the number of containers received? ..... YES NO

Did all bottle labels and tags agree with custody papers? ..... YES NO

Were all bottles used correct for the requested analyses? ..... YES NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES NO

Were all VOC vials free of air bubbles? ..... NA YES NO

Was sufficient amount of sample sent in each bottle? ..... YES NO

Date VOC Trip Blank was made at ARI..... NA

Was Sample Split by ARI: NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

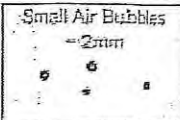

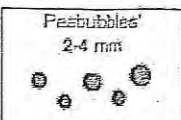

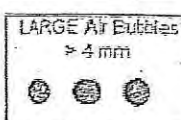

Samples Logged by: JBL Date: 10/21/2017 Time: 0835

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 20, 2017 under ARI workorder 17J0394. For details regarding sample receipt, please refer to the Cooler Receipt Form. Due to the salty nature of the samples many analysis needed dilutions, and multiple runs were reported.

### Volatiles - EPA Method SW8260C

The samples were run within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

There were no target compounds detected in the method blank.

The LCS/LCSD percent recoveries and RPD were within control limits.

### Total and Dissolved Hg - EPA Method 7470A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-6E5-1-102017. The matrix spike percent recovery and duplicate RPD were within QC limits.

### Total and Dissolved Metals - EPA Method 6020A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

### Dissolved Metals - EPA Method 6010C

Pioneer Technologies Corporation  
5205 Corporate Ctr. Ct. SE, Ste A  
Olympia WA, 98503

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

Reported:  
15-Nov-2017 18:02

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFJ0881 has Sodium and Iron detected below the reporting limits, but above the method detection limits. The Sodium and Iron have been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

#### **Anions - EPA Method 300.0**

The samples were analyzed within the recommended holding times.

Due to Sulfate matrix interference samples were ran at different dilutions as well as method 375.2 in addition to 300.0. The matrix interference makes the Sulfate results suspect and the results should be regarded as such. All of the dilutions and runs were reported.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-6E5-1-102017-(20). The matrix spike percent recoveries and duplicate RPD were within QC limits. The matrix spike has a Bromide concentration that exceeds the upper calibration limit. The Bromide has been flagged with an "E" qualifier on the matrix spike. No further corrective action was taken.

#### **Alkalinity - Method SM2320**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blanks.

The SRM percent recovery were within control limits.

#### **Total Dissolved Solids - EPA Method 160.1**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

**Reported:**  
15-Nov-2017 18:02

A duplicate was prepared in conjunction with sample GW-6E5-1-102014-(20). The duplicate RPD was within QC limits.

**Dissolved Organic Carbon - Method SM5310**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.
