Executive Summary

AECOM, Inc. (AECOM) was retained by the Kimberly-Clark Worldwide Inc (KCWW) to perform a Phase I Environmental Site Assessment (ESA) for the Everett Pulp and Paper Mill (Subject Property or Everett Mill) in the City of Everett, Snohomish County, Washington. The Subject Property consists of more than a dozen parcels that total approximately 69 acres of land. Approximately 66.2 acres are currently developed with the Everett Mill. Approximately 2.4 acres are parking lots for employees and visitors owned by KCWW adjacent to the Everett Mill. The Everett Mill operates as a sulfite pulp and paper mill, which produces bleached sulfite pulp, and various tissue products including paper towels, bath tissue, and napkins.

The Everett Mill is located at 2600 Federal Avenue, Everett, Washington 98201. The location of the Subject Property is provided on Figure 1. A Subject Property Diagram is presented as Figure 2. The Phase I ESA was conducted on behalf of the Client as part of a potential property transaction.

Phase I ESA

This Phase I ESA was conducted in general accordance with AECOM's proposal dated February 16, 2011, and the American Society for Testing and Materials (ASTM) Standard E1527-05 entitled *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) and historical RECs in connection with the Subject Property. ASTM Standard E1527-05 defines a REC as the following:

"The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions."

The ASTM Standard E1527-05 defines a historical REC (HREC) as the following:

"Environmental condition which in the past would have been considered a recognized environmental condition, but may or may not be considered a recognized environmental condition currently."

The RECs are depicted on Figure 3.

Overview of Subject Property History

Prior to 1890, the Subject Property was an undeveloped tidal flat of the Puget Sound. In the early 1900's the Subject Property was filled in and the surrounding properties were developed with a railroad track to the east and several industrial buildings. In 1927, the Puget Sound Pulp and Timber Company were founded, and in 1936 the Soundview Pulp Company assumed ownership. The pulp mill began operation in 1931 with five digesters and two pulp drying machines. Soundview Pulp Company then

merged with Scott Paper Company in 1951 and four Scott tissue machines were added to the facility from 1953 to 1955. The current distribution/warehouse facility located on the south end of the site was constructed in 1959. Initially logs were rafted to the Everett Mill, where they were chipped on-site. Approximately 40 years ago, rafting and chipping were discontinued. The log pond was filled to upland in the late 1970s, where the current chip pile and hog fuel storage area is located.

Two primary clarifiers were constructed in 1964 and secondary clarifiers with the current biological-aeration wastewater treatment plant were constructed in the late 1970's. Effluent from the plant discharges to the combined KCWW and City of Everett deep water discharge Outfall 100. Recovery Boiler No. 10 was constructed in 1974, which provided evaporation and burning of spent sulfur liquor from the pulp mill. Five original Dutch oven wood waste boilers were replaced by a new boiler (No. 14) in 1995. Boiler No. 14 is owned by Snohomish County Public Utility District (PUD), but is operated by KCWW. Kimberly-Clark Corporation and Scott Paper Company merged in 1995 and KCWW was later registered as owner of the Everett Mill Facility.

Currently, the facility includes five tissue machines, a tissue converting operation, a distribution warehouse, a sulfite pulp mill, two pulp dryers, a wastewater treatment facility, a bio-mass boiler, a chemical recovery boiler and three natural gas boilers. Support facilities include: a water filtration plant for treatment of water received from the City of Everett, railroad spur tracks, office/engineering facilities, storage facilities for wood chips and hog fuel, and semi-truck parking.

Adjacent property uses are industrial and include the Everett Navel Station to the north, Burlington Northern Santa Fe railway to the east, and Dunlap Towing to the southwest with the Port of Everett and the Dunlap Towing properties. Port Gardner Bay (East Waterway) is adjacent to the west and the ExxonMobil American Distribution Company (ADC) parcels are to the south, which are currently used for parking.

Summary of Findings, Opinion and Conclusions

AECOM conducted a Phase I ESA of the subject property in general accordance with ASTM Practice E1527-05. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report. HRECs and RECs are summarized below. This assessment identified the following HRECs in conjunction with the Subject Property:

1. UST removals – Based on review of Washington Department of Ecology (Ecology) records, ten underground storage tanks (USTs) were operated on the property at various times. In November 1989, eight USTs (Nos. 29, 67, 68, 69, 70, 71, 72, and 73) were removed from the property and Ecology was notified of fuel releases from UST Nos. 29, 68, 70, 71, 72, and 73 in December 1989. Additional USTs were removed in 1995 (70R) and in 1999 (68R). In 2002, the Facilities LUST I.D. No. 1627 was classified as inactive. The releases associated with the USTs are considered a HREC to the Subject Property due to the inactive LUST I.D. number and the resulting No Further Action review by Ecology.
2. Naval Reserve Property – KCWW exchanged a KCWW-owned property located north of the current north end semi-truck parking area for a Navy owned parcel (Naval Reserve Center Property) located just south of the secondary clarifier and aeration basins with the Navy in the mid-1990's. The US Navy remediated the site to below MTCA soil and groundwater cleanup levels, making the site an HREC with regard to the Subject Property.
3. Bleaching Tower area – A December 1999 letter report summarizes activities associated with petroleum impacted soil encountered during construction of a new bleaching tower. The letter

concluded the contamination is localized due to the lack of contamination detected in tests performed north of the area in 1994, and tests performed to the south of the area in 1997. Based on the 1999 analysis showing that petroleum-contaminated soils encountered during construction of a new bleach tower from an abandoned pipeline are localized, were removed, and additional remedial measures are not warranted the detected release is considered an HREC with regard to the Subject Property

4. PCB Transformer - PCB sampling at transformer stations 3/4 and 5/6 exceeded EPA PCB clean up levels (10µg per 100 cu.cm.) for concrete, and concrete removal was recommended by Safety-Kleen. The release of PCBs is considered an HREC based on confirmation sampling indicating residual soils at substation 5/6 were between 1.4 and 3.4 mg/kg PCBs below MTCA cleanup levels (10.0 mg/kg). Based on an interview between Mr. Chapin and a former employee (Mr. Rich Parson) they indicated the concrete below substation 3/4 was cleaned to EPA PCB clean up levels for concrete.
5. Former Paint Shop – A Scott Paper Memorandum dated August 3, 1994, indicated that contamination described as paint thinner, gasoline or xylene was encountered during the excavation of a utility line in the area of a former Paint Shop. A site investigation indicated the release is localized and additional remedial measures are not warranted. Based on the results of the site investigation, the contamination encountered in the area of the former Paint Shop is an HREC.
6. Rail Car Dumper Containment Vault Valve – A valve failure resulted in the release of two gallons of hydraulic fluid to the East Waterway in 1995. The spill was contained, cleaned up, and inspected by Ecology, and the matter closed (ERNS No. 547098). Consequently, the Rail Car Dumper Containment Vault is considered an HREC with regard to the Subject Property.

Based on current information, these HRECs are no longer considered current RECs in connection with the Subject Property.

This assessment has revealed the following RECs in conjunction with the Subject Property.

ExxonMobil ADC Site

1. Petroleum product and sheen was observed on water weeping through cracks in the asphalt area adjacent to the south side of the distribution/warehouse building on the Subject Property. Based on discussion with the Mill's Environmental staff and review of Ecology records, the petroleum product is associated with the ExxonMobil ADC Site, which is an ongoing MTCA cleanup site (Facility Site ID No. 2728) adjacent to the Subject Property. Because petroleum contamination from the ExxonMobil ADC Site has been found on the Subject Property, the Exxon Mobil ADC Site is considered a REC with regard to the Subject Property.

Former Oil House and Former Gasoline/Bunker C ASTs

2. The former oil house and former gasoline/Bunker C fuel oil AST farm and associated underground piping are considered a REC to the Subject Property because TPH-Oil was detected above MTCA Method A groundwater cleanup levels in Probe 13 and Probe 14, and a 1950 Sanborn Map depicted an oil house in the area of Probe 14. Based on the detected petroleum compounds and concentrations found in the area of the former oil house and former gasoline/Bunker C fuel oil AST farm and associated underground piping, and the absence of documented completed remediation, the release is considered a REC to the Subject Property.

Heavy Duty Shop Sump

- Petroleum staining was visible around and in a catch basin located in the Heavy Duty Shop. Water and petroleum product was observed in the catch basin along with a sump pump. Staining was observed on the outside of the building below the former discharge point of the sump pump. This sump was connected to the WWTP in 2008. Based on the petroleum staining around and in the sump and knowledge of a conveyance system that could discharge to the East Waterway from the catch basin, the Heavy Duty Shop sump is considered a REC to the Subject Property.

Railcar Dumper Hydraulic System Building (south side)

- Hydraulic fluids were observed on the interior floor and staining was observed on the interior walls and on a small area of the exterior south wall, and ground surface of the Rail Car Dumper hydraulic system building next to a small unpaved area on the south side of the building. Environmental staff indicated that a pipe in the lower exterior south wall has been identified and plugged to assure the integrity of the secondary containment function of the building. Due to the hydraulic fluid staining and knowledge of a pipe that could historically have discharged to the ground surface from inside the building, the area adjacent to the south side of the Rail Car hydraulic system building is considered a REC with regard to the Subject Property.

Dutch Ovens 1 through 5

- Soils were excavated for the foundation for Sand Filter 1, which was constructed within a building in the area of the Dutch Ovens 1 through 5. Some of the excavated material was identified as potentially consisting of spent sulfite liquor. The soils were characterized for proper landfill disposal. Results of the profiling detected arsenic (35.4 mg/kg) and cadmium (5.21 mg/kg) above MTCA Method A soil cleanup levels and were found acceptable for landfill disposal. Following the excavation, the area within the building was restored with an impervious surface. Further soil investigation was not performed to determine if the impacts were fully removed. As such, the detected impacts are considered a REC to the Subject Property.

Latex Spill Area

- In 2008, approximately 28,000-gallons of latex were released due to an undetected break in a railroad car off-loading line. Latex used as a binder in paper products is considered non-toxic, however, formaldehyde, a component of latex, is considered a hazardous substance. The 2008 release is considered a REC to the Subject Property.

East Waterway

- A number of historical sources related to industrial and maritime industries, and urban runoff have contributed to the detected contamination in the East Waterway. Because the Everett Mill discharged untreated effluent to the East Waterway from 1929 to 1964, as well as other historical discharges from the Subject Property to the East Waterway that might have contained constituents of concern, the East Waterway is considered a REC with regard to the Subject Property.

This assessment has revealed the following *de minimis* conditions in conjunction with the Subject Property.

- De minimis* hydraulic fluid stains at a pulp press in building 4 were noted on a concrete pad, which was in good condition.

- SSL was noted on the asphalt in the SSL Washer Building. The SSL appeared to be leaking from a process line to the asphalt and then to a u-drain which, according to Mr. Chapin Brackett, ran to the WWTP. Due to the good condition of the asphalt and the SSL was directed to the WWTP it was a *De minimis* condition.
- *De minimis* hydraulic fluid stains were noted on the floor of the Chip Silo Building No. 39, which was in good condition.
- *De minimis* oil staining was observed in the sump and concrete floor for the used oil room in Building No. 4. The sump and floor were in good condition.
- *De minimis* oil staining was observed on a paved asphalt area under the Hog Fuel Stoker. The paved area drains to two catch basins which drain to the WWTP.
- *De minimis* latex spill was noted in the area of the latex off-loading area.

While not considered RECs or HRECs, the following environment issues and ASTM Non-scope items associated with the Subject Property are presented below.

- Possible ACM was noted throughout the buildings of the Subject Property.
- Possible lead containing paint was observed on structures throughout the Subject Property.
- A suspected PCB containing transformer is located in the Chip Loft and is labeled Chip Loft 25 KVA Transformer, MCC 215-2A.
- The Everett Mill dates back to approximately 1927 and operations conducted at this facility over the past 84 years have utilized a number of hazardous materials and petroleum products. Review of site investigation and geotechnical boring logs indicates fill material described as demolition debris and wood processing waste has been placed on the Subject Property.

The Phase I ESA did not identify any significant data gaps that constitute RECs.

1.0 Introduction

1.1 Purpose

AECOM, Inc. (AECOM) was retained by Kimberly-Clark Worldwide, Inc. (KCWW) to perform a Phase I Environmental Site Assessment (ESA) of the Everett Pulp and Paper Mill (Subject Property or Everett Mill) located in the City of Everett, Snohomish County, Washington. The Phase I ESA was conducted on behalf of KCWW as part of a potential property transaction.

The purpose of the Phase I ESA is to perform all appropriate inquiry into the ownership and uses of the Subject Property consistent with good commercial or customary practice in conformance with American Society for Testing and Materials International (ASTM) Standard E1527-05. The study identifies recognized environmental conditions (RECs) and historical RECs (HREC) in connection with the Subject Property, as defined by ASTM. ASTM Standard E1527-05 defines a REC as the following:

"The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions."

The ASTM Standard E1527-05 defines a historical REC (HREC) as the following:

"Environmental condition which in the past would have been considered a recognized environmental condition, but may or may not be considered a recognized environmental condition currently."

1.2 Detailed Scope-of-Services

This Phase I ESA includes the following tasks concerning the Subject Property:

- Records review of reasonably ascertainable information (governmental and historical);
- Site reconnaissance;
- A physical setting description;
- Interviews with present and past owners, operators, occupants, and/or local government officials, where applicable;
- A request for and review of user provided information; and
- Evaluation of the data collected and preparation of a written report.

Additional tasks, as defined by ASTM E 1527, Section 12.1.4, as non-scope items includes the following:

- Observations for lead-based paint were made during site reconnaissance.
- AECOM reviewed reasonably ascertainable information on radon.
- Observations of asbestos-containing materials (ACMs) were made during site reconnaissance.

These data collected and resources reviewed are discussed throughout the text of this report and are listed in Section 10.0 of this report. No sampling or testing was performed during this Phase I ESA. Limitations and exceptions to this Phase I ESA are described in Section 1.4 of this report. Data gaps are described in Section 7.5.

1.3 Significant Assumptions

AECOM assumes that all information obtained from Client regarding the Subject Property is correct and complete. AECOM also assumes that Client has provided AECOM with all reasonably ascertainable prior environmental reports concerning the Subject Property. Finally, AECOM assumes that this Phase I ESA report will be read as a whole by the user.

This report has been prepared to summarize observed RECs and historical RECs for the Subject Property. Environmental conditions and regulations are subject to constant change and re-interpretation. Current observations, conditions, or regulatory positions may not represent conditions at some future time. This report represents AECOM's judgment and opinion based on the information obtained. No warranty, either expressed or implied with regard to the site conditions, or Client's ability to assert any defense under CERCLA or any comparable state law for residual environmental impairment, is contained herein.

1.4 Limitations and Exceptions

This Phase I ESA was conducted in general accordance with ASTM Standard E1527-05 and in a manner consistent with others performing Phase I ESAs under the same conditions and in the same locality. This Phase I ESA did not include a review of or testing for the additional non-scope items identified in ASTM E1527-05, Section 12.1.4, listed below:

- Cultural and Historical Resources
- Industrial Hygiene
- Ecological Resources
- Indoor Air Quality
- Lead in Drinking Water
- High Voltage Power Lines
- Wetlands
- Endangered Species

Factual information regarding operations, conditions, and test data were obtained, in part, from Client, outside agents, and third parties and have been assumed by AECOM to be correct and complete. As with any due diligence evaluation, there is a certain degree of dependence upon oral information provided by facility or site representatives which is not readily verifiable through visual observations or supported by any available written documentation. AECOM shall not be held responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed by

facility or site representatives at the time this assessment was performed. In addition, the findings in this report are subject to certain conditions and assumptions. The conditions and assumptions are noted in this report, and any party reviewing the findings of this report must carefully review and consider all such conditions and assumptions. Because the facts stated in this report are subject to professional interpretation, they could result in differing conclusions. In addition, the findings and conclusions contained in this report are based on various quantitative factors, as they existed on or near the date of the site reconnaissance. The passage of time may result in changes in technology, economic conditions, site variations, or regulatory provisions which would render the report inaccurate. Reliance on the report after the date of issuance as an accurate representation of current site conditions shall be at the user's sole risk.

This Phase I ESA reflects conditions, operations, and practices as observed on the dates of the site visit (February 28th through March 4th, 2011). Storage of equipment and materials and mechanical equipment associated with operations were located throughout the Subject Property. This material obstructed and covered many areas of the Subject Property during the walk over, limiting the ability to view and observe the ground surfaces. Changes or modifications to the Subject Property made after the site visit are not included.

1.5 Special Terms and Conditions

This Phase I ESA of the Subject Property has been prepared for Client. The work was performed in accordance with AECOM Proposal dated November 11, 2010, and ASTM Standard E1527-05 - *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. Qualifications of persons who were involved with this Phase I ESA are included in Appendix A.

1.6 User Reliance

This report is confidential and was prepared for the Client subject to the scope of services described herein and the project Terms and Conditions. No other party is entitled to rely on the conclusions, observations, specifications, or data contained herein without first obtaining AECOM's written consent and provided any such party signs an AECOM generated Reliance Letter. A third party's signing of the AECOM Reliance Letter and AECOM's written consent are conditions precedent to any additional use or reliance on this report. AECOM accepts no responsibility for application or interpretation of the results by any other parties.

2.0 Site Description

2.1 Location and Legal Description

The Subject Property is the Everett Pulp and Paper Mill (Subject Property or Everett Mill) located at 2600 Federal Avenue in the City of Everett, Snohomish County, Washington. The Subject Property consists of 16 different tax parcels of land with a total acreage of approximately 69 acres. Approximately 66.21 acres are currently developed with the Everett Mill. Approximately 2.44 acres are parking lots for employees and visitors owned by KCWW adjacent to the Everett Mill.

All of these parcels are located in Section 19 of Township 29 North, Range 5 East. The latitude and longitude in the approximate center of the Subject Property is 47.983400 and 122.217100, which was used for the records search radius.

The tax parcels and associated acreage are the following:

Everett Mill Facility

| Tax Parcel Number | Acreage |
|-------------------|--|
| 29051900201500 | 4.00 |
| 29051900201300 | 18.63 |
| 29051900201100 | .04 |
| 29051900201000 | 4.22 |
| 29051900200900 | 2.36 |
| 29051900200200 | 5.47  |
| 29051900200100 | 26.70  |
| 00597761803000 | .34 |
| 00597761801000 | .22 |
| 00597761800600 | .27 |
| 00437461700200 | 2.41 |
| 00597761803901 | 1.57 |

Parking Lot Parcels

| Tax Parcel Number | Acreage |
|-------------------|---------|
| 00516048600000 | 1.18 |
| 00516055600000 | 0.83 |
| 00437455601300 | 0.25 |
| 00437455701302 | 0.09 |
| 00437455701301 | .02 |
| 00437455701600 | .07 |

The Subject Property is currently owned by KCWW. The Mill has a Cogeneration Plant Building, which houses Boiler No.14, owned by the Snohomish County Public Utility District No.1 (PUD) and operated by KCWW. The City of Everett, which uses the Mill's outfall, also has a facility located on the Subject Property in order to sample and support industrial water reuse equipment.

KCWW also has a lease with the City for Parking Lot B (south of the parking lot parcels that are owned by KCWW). The Everett Mill has a longstanding lease with the Washington Department of Natural Resources (DNR) for use of the tidelands and aquatic lands next to the Everett Mill, which KCWW terminated in 2003. KCWW has agreements and easements with DNR, the Port of Everett, and the City of Everett for Outfall 100.

The location of the Subject Property is provided on Figure 1. A Subject Property Diagram is presented as Figure 2.

2.2 Site and Vicinity General Characteristics

The Subject Property is located in an industrial port area on the west side of the City of Everett, Washington. The Subject Property is located on the East Waterway, a dredged waterway in Port Gardner Bay, near the mouth of the Snohomish River and Possession Sound. The bay and sound are part of Puget Sound.

The Subject Property and surrounding properties have been developed for industrial uses, as described below.

2.3 Current Use of the Property

The Subject Property is currently designated heavy industrial under the City of Everett comprehensive plan and zoning code. The portion of the Subject Property within 200 feet of the shoreline is designated urban deep water port under the City of Everett shoreline management program.

The Subject Property is occupied by the Everett Mill described in more detail in this report. The Everett Mill operates as a sulfite pulp and paper mill, which produces bleached sulfite pulp and various tissue products including paper towels, bath tissue, napkins, and wipers.

When viewed on the attached Figure 2, the Subject Property consists of four distinct "sections" with distinct operations: tissue manufacturing/wastewater treatment, biomass receiving/distribution, pulp storage/bag house, and pulp processing/warehouse. The four sections are identified on the attached Figure 2 by color, and the facilities structures are identified by numbers.

2.4 Description of Improvements on the Site

The Subject Property is improved with the mill operation that occupies approximately 66 acres and 1.2 million square feet of building space. The mill operations includes: pulp mill that produces bleached sulfite pulp, five tissue machines (Machines Nos. 1, 2, 3, 4, and 5), spent sulfite liquor (SSL) recovery boiler (No. 10 boiler), biomass cogeneration boiler (No. 14 boiler) and associated steam turbine, natural gas and Number 2 fuel oil boilers (Nos. 7, 8, and 9 boilers), and a distribution/warehouse building. Support facilities include a wastewater treatment plant (WWTP), a water filtration plant, office/engineering facilities, semi-truck parking, and wood chip and hog fuel storage, as shown on Figure 2.

Process and drinking water are supplied by the City of Everett in separate systems. Drinking water is filtered and treated by the City of Everett and provided through the municipal drinking water system. The City of Everett pipes process water directly to the Everett Mill, which conditions the water for use at the on-site water infiltration plant. Electricity is supplied by the PUD and natural gas is distributed by Puget Sound Energy. According to site personnel, no septic systems or potable wells are located on the Subject Property.

The Subject Property also includes an additional approximately 2.44 acres of adjacent parking lots for employees and visitors on West Marine View Drive, as shown on Figure 2.

2.5 Current Uses of the Adjoining/Adjacent Properties

AECOM observed the adjoining/adjacent property usages during the site reconnaissance to identify potential RECs concerning the Subject Property. The adjoining/adjacent properties were observed from public rights-of-ways (ROW) and the Subject Property. The occupants of these properties were not contacted as part of this Phase I ESA; records pertaining to these facilities were analyzed as part of the records review in Section 4. The adjoining/adjacent property uses/occupants are as follows:

- North – Everett Naval Base (property owned by the U.S. Government)
- East – Burlington Northern Santa Fe (BNSF) Railroad main line and siding tracks, West Marine View Drive (a major arterial roadway serving the port area), and beyond residential.
- West – A PUD substation is located west of the tissue mill within the Everett Mill property boundary. Port Gardner (East Waterway) and Everett Naval Base, and beyond the Puget Sound.
- South – Dunlap Towing to the southwest, with the Port of Everett beyond the Dunlap Towing property. The ExxonMobil American Distribution Company (ADC) parcels to the south, which are currently used for parking.

Monitoring wells associated with the ongoing remediation of the ExxonMobil ADC MTCA state cleanup site (Facility Site ID No. 2728) were observed on the ExxonMobil ADC Site.

3.0 User Provided Information

Information regarding the review of recorded land title records, environmental liens or activity and use limitations, specialized knowledge, commonly known or reasonably ascertainable information, and the reduction of Subject Property value due to environmental issues, was requested from the Client. At the time this report was written, AECOM did receive the completed user questionnaire from the Client. The User Questionnaire can be found in Appendix C.

3.1 Title Records

Chain-of-title and an independent title record search was not part of this Phase I ESA's scope of work. Environmental lien information was provided to AECOM on the attached User Questionnaire did not identify environmental liens or activity and use limitations for the Subject Property.

3.2 Specialized Knowledge

The user of this report, KCWW, provided various reports including a Spill Prevention, Control and Countermeasure Plan (SPCC) dated July 2009, National Pollution discharge Elimination system (NPDES) Waste discharge Permit No. WA-000062-1 dated February 1, 2009, Soil and Groundwater Investigation former Underground Petroleum Storage Tanks dated April 18, 1997, and various reports identified in the Reference Section (Section 10), which has been incorporated throughout this report.

3.3 Commonly Known or Reasonably Ascertainable Information

AECOM reviewed the historical documents mentioned in Section 4.0, and the records identified in Appendix D. We also interviewed Mr. Robert Waddle (Environmental Team Leader), Mr. Chapin Brackett (Environmental Engineer), Mr. Jim Ketchum (Asbestos and Lead Records Coordinator), and Mr. Richard Abrams (former Environmental Team Leader). We believe this was all of the reasonably ascertainable information.

3.4 Valuation Reduction for Environmental Issues

Information regarding whether Client was aware or unaware of any market value reduction of the Subject Property due to environmental concerns was not provided at the time of this report.

3.5 Owner, Subject Property manager and Occupant Information

The current owner and occupant of the Subject Property are as follows:

Owner and Occupant: KCWW

Occupants: The PUD and City of Everett have agreements with KCWW to service facilities they (PUD) own that are located on the Subject Property, as described in Section 2.1.

3.6 Reason for Performing Phase I ESA

This Phase I ESA was completed as part of a property transaction, as described in Section 1.1.

4.0 Records Review

The purpose of the environmental records review is to identify RECs and HRECs in connection with the Subject Property.

4.1 Environmental Database Records Sources

Current federal and state database listings for hazardous waste and other potentially impaired sites within specified search distances were identified for the Subject Property and vicinity by Environmental Data Resources, Inc. (EDR), a subcontract environmental record search firm. These sites are located by address on the EDR Radius Map located within attached EDR report. These listed sites were reviewed by AECOM to identify sites that pose RECs to the Subject Property. The databases reviewed by EDR were the most recently available as of February 25, 2011. The database sources and distances searched by EDR are included in Appendix E.

The following is a summary of the number of sites identified within respective search distances on the following databases:

- Federal CERCLIS – 1 site
- Hazardous Sites List State and Tribal Equivalent NPL (HSL) – 7 sites
- State Hazardous Waste Site Equivalent to CERCLIS (CSCS List) – 14 sites
- RCRA-NonGen (NonGen) – 2 sites
- State and Tribal Landfill (SWF/LF) – 1 site
- Leaking Underground Storage Tanks (LUST) – 9 sites
- Underground Storage Tanks (UST) – 4 sites
- Voluntary Cleanup Sites (VCP) – 3 site
- State and Tribal Institutional Control/Engineering Control Registries (INST Control) – 1 site
- Remedial Action Reports to Ecology (ICR) – 7 Sites
- Confirmed and Suspected Contaminated Sites (CSCSL NFA) – 5 sites
- Hazardous Waste Manifest Information (MANIFEST) – 1 sites
- ALLSITES – 53 sites

AECOM also reviewed the EDR Report for orphan sites. The orphan summary list typically includes sites with locations that could not be mapped by EDR due to incomplete or erroneous address information. AECOM attempted to identify the locations of the orphan sites during the site reconnaissance.

The MTCA sediment sites in the East Waterway and Port Gardner Bay are shown in Appendix E on the overview map in the records review report as an address adjacent to the waterway as EDR maps sites to addresses not to bodies of water.

Subject Property

The Subject Property was identified on the EDR report. The identified listings on the EDR Report are the following:

- Emergency Response Notification System (ERNS) – 48 listings noted in the database report for individual spill incidents.
- LUST – Released I.D. 1624 was established in 1989 for the Subject Property in association with the removed UST Nos. 29, 68, 71, 72, and 73. The LUST number was inactivated on November 14, 2002. The database includes Tank ID numbers, an UST ID number, and Facility Site ID No.9); additional information is provided in Section 5.4.
- UST – No active USTs were identified, and ten USTs (Nos. 29, 67, 68, 68R, 69, 70, 70R, 71, 72, and 73) were reported as being removed from 1989 to 2002. See Section 5.4 for additional information.
- RCRIS-LQG – The facility is a large quantity generator of hazardous waste (>1,000 kg/month).
- PCB Activity Database System (PADS) – The facility removed PCB-containing equipment between 1994 and 2004 triggering the database listing.
- Toxic Chemical Release Inventory System (TRIS) – Facility's annual agency submission of Form R's regarding the use and emissions of regulated materials.
- Facility Index System (FINDS) – The facility is listed on FINDS due to the EPCRA reporting and the facility's Title V Air Permit.
- Aerometric Information Retrieval System (AIRS) Facility – The facility is listed on AIRS is due to the Title V Air Permit.
- Integrated Compliance Information System (ICIS) – Contains several listings of mostly air and EPCRA compliance issues.
- Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)/TSCA and FIFRA/TSCA Tracking System (FTTS) – Tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA, and EPCRA. Three cases were reported on FTTS related to compliance inspections. All three reported cases were reported on the Historical FTTS, which is database of closed out records.
- Toxic Substance Control Act (TSCA) database – The facility is listed on the database due to the manufacture of SSL and the removal of PCB containing equipment.
- SPILLS – Spills were reported to the Spill Prevention, Preparedness and Response Division for releases of chemicals to the air, subsurface, and water.
- Solid Waste Facility/Landfill (SWF/LF) – The Subject Property was mistakenly identified as a SWF/LF in the EDR Report. The correct listing is for the Fibres International facility located at 2600 94th Street, Everett, WA. ICR – The Subject Property is listed on ICR for the Former Paint Shop site, which was reported to the Ecology on September 26, 1994 for the release of petroleum products and non-halogenated solvents to the soil. Additional discussion of the Former Paint Shop is in Section 5.4.
- PCB Transformers – The Subject Property reported the removal of 14 PCB Transformers from 1998 to 2005. A release was identified in association with several of the removed PCB transformers (Substations 3, 4, 5, and 6). Additional discussion of the PCB transformers is in Section 5.6.

- Facility/Site Identification System Listing (ALLSITES) of facilities and sites of interest to the Ecology– This listing is for the PUD substation located just west of the tissue mill.
- Hazardous Materials Information Reporting System (HMIRS) for facilities that reported hazardous material incidents to the DOT – 100 gallons of sulfuric acid was spilled on the Subject Property by Arrow Transportation Company on March 17, 1992.
- US Navy Reserve Center – Listed on the ALLSITES (U003028041) and UST database with an interaction start date of June 8, 1998, and an interaction end date of May 3, 2000. The site is associated with the former naval reserve center located on the north end of the Subject Property. Two USTs were listed as removed in 1996.

Surrounding Properties

Groundwater flow in the vicinity of the Subject Property is anticipated to be to the west-northwest towards East Waterway. AECOM has reviewed the database listing provided in the report and concluded that based on either the nature of the listing, the inferred hydrological gradient and /or subsurface soils (see Section 4.2), the distance from the Subject Property, and/or status of the listings with the relevant regulatory authority, these sites are not considered to represent concerns with respect to the Subject Property, with the exception of the following potential sites:

- ExxonMobil ADC Site, 2717 and 2731 Federal Avenue – ExxonMobil ADC Site, which is located on and adjacent to the south end of the Subject Property, is listed on the CSCSL, HSL, ALLSITES, and INST CONTROL databases for soil and groundwater contamination. Additional discussion of the ExxonMobil ADC site is in Section 4.2 (Ecology files).
- East Waterway – The East Waterway Site is adjacent to the west boundary of the Subject Property and is listed on the FINDS, CSCSL, ALLSITES, and HSL database. The East Waterway was listed as a MTCA site in 1996. Additional discussion of the East Waterway is in Section 4.2 (Ecology files).
- Kimberly Clark Outfall – A Kimberly-Clark Outfall site is listed on FINDS, CSCSL, ALLSITES, and HSL databases. The Kimberly-Clark Outfall site was listed on the HSL database with a rank of 5 and the facility status was awaiting cleanup. In addition, the KCWW Outfall was listed on the ALLSITES on January 30, 2004 as an Independent Cleanup site. Additional discussion is in Section 4.2 (Ecology files).

Unmapped Properties

Ninety-seven orphan sites were identified in the EDR Report. Based on either the nature of the listing, the inferred hydrological gradient, the distance from the Subject Property, and/or status of the listings with the relevant regulatory authority, these sites are not considered to represent concerns with respect to the Subject Property. However, two orphan sites may be associated with the Subject Property and were identified as the following: “Scott Paper” and “Scott Paper into Entrainment Area”. Both orphan sites were listed as ERNS. Review of Ecology spill files did not indicate any open spills for the Subject Property; as such, the two orphan sites are not considered RECs to the Subject Property. The adjacent ExxonMobil ADC was listed as an orphan UST site. Review of Ecology’s UST records indicates a UST was removed from the ExxonMobil ADC property in 1995 and reported as cleaned up in 2001.

4.2 Additional Environmental Record Sources

City of Everett Records

AECOM reviewed records at the City of Everett Library. Records include the Kroll's City of Everett 1892, 1929, 1947, and 1963 Atlas. The Atlas's indicated the Subject Property was tidal flats in 1892 and was then developed with the Soundview Pulp Mill in 1929. The 1963 Atlas indicated the Subject Property is occupied by the Scott Paper Mill. Review of the Library's 1953 topographic map depicts four ASTs located on the south end of the Subject Property, and the Navy Reserve Center located on the north end of the Subject Property. Reviewed historical photographs (Mill Town, 1950) depicted the Subject Property occupied by buildings on pilings in 1908.

Review of City building permits and other relevant records located at the City of Everett Public Works building at 3200 Cedar Street. These records included building permits, utility records, and city engineering files from 1929 to 2010. Many of the files were related minor facility upgrades. However, several important facility upgrades were noted such as a 1976 permit for shoreline filling for the secondary treatment system, a 1994 permit to fill-in the around the central chip storage area, and a 1994 permit to construct the Boiler No. 14. A reviewed Geotechnical Investigation (Dames & Moore, March 1995) for the converting Plant addition indicated fill soil up to 15 feet in thickness comprised of loose sand and wood chips.

Information obtained from the review of the City of Everett records have been incorporated throughout this report. No other environmental issues of concern were identified in the records reviewed.

City of Everett Fire Department Records

On Monday, March 21, 2011, AECOM contacted Ms. Lauren Willie, Office Specialist for the City of Everett Fire Department, regarding her knowledge of environmental impacts and the presence of tanks on the Subject Property or adjacent properties. Ms. Willie indicated that the fire department did not have any records of tank activity during the last five years; however, they did have one record of a 50-pound ammonia leak in 2009. Four permits were issued in the 1990's for tank removals. No environmental issues of concern were identified in the records review.

Snohomish County Records

AECOM reviewed Snohomish County Assessor's records for the 16 parcels that make up the Subject Property. The records provided acreage, general property description, parcel number, tax rates, and general description of structures which were incorporated throughout this report. No other environmental issues of concern were identified in the records reviewed. Snohomish County Health District records were not reviewed (See Data Gap Section 7.5). The online Snohomish County Assessor's records are provided in Appendix F.

Snohomish County Public Utility District

AECOM contacted Mr. John Gregory (Distribution Services Manager) of the PUD regarding potential transformers located on the Subject Property. Mr. Gregory had no knowledge of PUD transformers located on the Subject Property. He was aware of the PUD substation located west of the tissue mill. He was not aware of any transformer fluid releases associated with the substation.

Washington Department of Ecology File Reviews

AECOM reviewed available Ecology Industrial Section and Spills records associated with the Subject Property and adjacent sites that were identified as possible RECs to the Subject Property. Below is a

review of significant reports. A list of additional reviewed reports can be found in Appendix D and the reference section of this report.

Subject Property

McDonnell Engineering, Inc., "UST Removal Site Check/Site Assessment," December 27, 1999 - regarding 1999 UST removal

The report summarized the abandonment by removal of a 500-gallon unleaded gasoline UST, piping, and pump island in November 1999. The report indicated field observation of a slight gasoline odor from the pea gravel fill at the base of the tank cavity. Four soil samples were collected from the UST excavation and pump island. Contamination was not detected in the four samples. Additional discussion of UST status is in Section 5.4.

Department of Ecology, LUST Cleanup Report Review, September 5, 2002

The document indicated the Subject Property LUST sites were given a No Further Action (September 9, 2002) under LUST review by Ecology and prior authority through the County of Snohomish. Additional discussion on UST status is in Section 5.4.

Adjacent Properties

Kimberly-Clark Outfall Site

Parametrix, Inc., Combined Release and Remediation Report, November 6, 2003 - regarding Kimberly-Clark Outfall Site

During the construction of Outfall 100 (described in Section 4.4.1), a small area of petroleum-contaminated soil was encountered along a portion of the outfall located south and off-site of the Subject Property under the California Street Overcrossing. KCWW excavated and removed the problem soils, transported them to a permitted facility for treatment and reuse or disposal, and submitted a combined release and cleanup report to Ecology (Parametrix 2003). The Kimberly-Clark Outfall site is not considered a REC for the Subject Property because the remediation is documented and the location is off-site and does not affect the Subject Property.

Weyerhaeuser Mill A Former Site

The Weyerhaeuser Mill A Former Site is located within one mile of the Subject Property at 3500 Terminal Avenue, Everett, Washington 98201, and should have been identified by the EDR report in the Appendices. The Weyerhaeuser Mill A Former Site is listed on the CSCS (FS ID No. 1884322), which identifies confirmed sediment contamination for a range of chemicals. The Ecology site status is: remedial action in progress, awaiting cleanup.

According to Ecology Puget Sound Initiative records, historical operations at the Site included sawmill (Bell-Nelson Mill – 1896 to 1901; Weyerhaeuser Lumber Mill – 1901 to 1930s) and pulp mill operations. Weyerhaeuser operated a sulfite pulp mill at the Site (known as "Mill A") which was later converted to a thermomechanical mill in 1975. The property was bought by the Port of Everett (Port) in 1983, and the uplands were cleared for use as a log yard in 1987. As noted in Section 5.8.2, the Weyerhaeuser and Everett Mill shared use of the former deep water Outfall 001.

The Weyerhaeuser Mill A Former Site does not affect the Subject Property because it is located nearly a mile away, however, it is also a facility that may be associated with the East Waterway site. The above Weyerhaeuser Mill information was supplied by KCWW outside counsel.

Subject Property & Adjacent Properties

Kimberly-Clark Letter to Department of Ecology, June 2, 1997 - regarding Bunker C fuel AST, former Chevron facilities, and ExxonMobil ADC Site

A letter notifying the Ecology that KCWW removed the remaining Bunker C fuel AST located north of the distribution/warehouse. The letter also indicated that soil samples were collected of discolored soil from within the tank farm area and fingerprint analyses were performed. The results of the analytical analysis indicated light oil fractions, and the letter concluded that these fractions are most likely not the same material as the ExxonMobil ADC Site. The letter also stated that this contamination constitutes a separate release from that found to the south. Also see Pacific Environmental Group, Inc. report described below.

Pacific Environmental Group, Inc., "Environmental Investigation Report," April 14, 1998 - regarding former Bunker C fuel AST area. Former Chevron facilities, and ExxonMobil ADC Site

Pacific Environmental Group, Inc (PEG) conducted an assessment on behalf of Chevron, Texaco, Kimberly-Clark, and BNSF in response to Ecology's decision to name the five entities as PLPs for the petroleum contamination found on the ExxonMobil ADC Site in the course of construction by the City of Everett of a Combined Sewer Outfall (CSO) line in 1995. The project included installation of 15 soil probes (Probe 1 through Probe 15), two soil borings were converted into monitoring wells (KC-1 and KC-2), and collection of soil and groundwater samples from the borings and probes. Results of the assessment were the following:

- Detected concentrations of TPH-gasoline, TPH-diesel, TPH-oil, and toluene in soil samples did not exceed MTCA Method A soil cleanup levels.
- Groundwater samples in the vicinity of the former Associated/Tidewater AST farm and former Standard Oil/Chevron AST tank farm north of the KCWW warehouse were non-detect.
- Groundwater samples in the vicinity of fuel oil piping in association with the former Bunker C AST and in the vicinity of a former oil house identified on Sanborn drawings (Probes 13 and 14) found elevated levels of TPH-Oil
- Groundwater samples close to the Everett Mill south property boundary and ADC property (Probes 7 and 11) found high elevated levels of both TPH-Diesel and Oil that were different in nature than the results from Probes 13 and 14.

Probe 13 and Probe 14 were in the historical area of an underground fuel pipe line that ran from the unloading dock just south of the old machine shop to the former Bunker C AST farm. In addition, a 1950 Sanborn Map depicted an oil house in the area of Probe 14. Based on the detected compounds in Probes 13 and 14, the former oil house, gasoline/Bunker C fuel oil AST farm, and associated underground piping are considered a REC to the Subject Property.

Letter to Ecology from Kimberly-Clark, Chevron Products Company, Texaco EH&S, and Burlington Northern/Santa Fe regarding Subsurface Investigation Results, Port of Everett- Former Bulk Facilities, April 20, 1998.

Ecology received a letter from four of the named PLPs at the ExxonMobil ADC Site providing the results of the investigation described in the Pacific Environmental Group report above. The letter explains that there is no basis for a link between the former bulk plants located on and adjacent to the Subject Property and the ExxonMobil ADC Site.

ExxonMobil ADC Site

Ecology Site Lists and Database (HSL, CSCS, Toxics Cleanup Program website)

The Ecology database and records identify this MTCA Site as the "ExxonMobil ADC Site" (Facility Site ID 2728), located at 2717 and 2731 Federal Avenue, Everett, Washington 98201. It is listed on the state Hazardous Sites List with a hazard ranking of "2" (the scale is 1 to 5, with 1 considered the most hazardous, and 5 the least hazardous). The Ecology CSCS database identifies the site as having confirmed petroleum and non-halogenated solvent contaminants in soil and groundwater. Ecology's current site status is "cleanup started."

Department of Ecology Letter to Kimberly-Clark, "Notice of Potential Liability Status," February 7, 1997

KCWW was given notice that Ecology finds it to be a "Potentially Liable Person" (PLP) as applied to the "facility" known as ExxonMobil ADC Site. As noted below, ExxonMobil and ADC have entered into an Agreed Order with Ecology to perform remedial actions; the Ecology site manager indicated that as the property owner KCWW was named as a PLP.

Department of Ecology, Publication Number 08-09-122, November 2009

The document requests public comments on the proposed Agree Order, Focused Feasibility Study (FFS) Work Plan, and Public Participation Plan. The document also provides a summary of the site background which includes the cleanup of petroleum releases at the City of Everett's combined sewer overflow (CSO) line located on the south end of the Subject Property in 1996 and interim actions performed between 1998 and 2000. These actions included demolition of site structures, construction of an interceptor trench, and construction of a site cover to minimize movement of surface water into the impacted soil.

AMEC, "Focused Feasibility Study Work Plan," February 26, 2010

AMEC Earth and Environmental, Inc. (AMEC) prepared a FFS Work Plan that incorporated a Data Gap Investigation Sampling and analysis plan for the ExxonMobil ADC property. The purpose of the FFS is to identify and evaluate remedial alternatives for the contaminated subsurface soil to minimize or prevent further releases of pollutants in the groundwater and reduce the off-site migration of contaminated groundwater. AECOM reviewed the report and provides the following summary of its content:

- Soil samples collected at the site indicated the following:
 - TPH-Diesel and TPH-Gasoline have been detected at concentrations above the MTCA Method A for cleanup levels in borings advanced along the KCWW south property line.
 - Carcinogenic polycyclic aromatic hydrocarbons (CPAHs) were detected below MTCA Method A industrial cleanup levels but above MTCA Method A for unrestricted use in four borings along the KCWW south property line.
- Groundwater is at a depth ranging from 1.0 to 5.0 feet bgs and flows to the west to northwest.
- Groundwater samples collected from monitoring wells installed just south of the KCWW property line indicated that groundwater is impacted at concentrations above screening levels along the southern property line. Liquid-phase petroleum hydrocarbons (LPH) were detected in wells along the south center and southeast areas of the KCWW property just south of the KCWW Distribution/Warehouse. 23,000-gallons of LPH were removed when the City of Everett installed the CSO running south and parallel to the KCWW Distribution/Warehouse.
- Three primary Remedial Action Objectives (RAOs) have been identified:

- Reduce the potential for indicator hazardous substances (IHSs) to leach from site soil to groundwater.
- Reduce the potential for IHSs to migrate off site.
- Meet cleanup levels in soil and groundwater at the applicable point of compliance within a reasonable restoration time frame.
- The FFS Work Plan determined the FFS will focus on evaluating four remedial alternatives which include:
 - Excavation of secondary source areas, capping, and natural attenuation monitoring.
 - Capping of source area and natural attenuation monitoring.
 - Subsurface slurry wall containment barrier, capping, and natural attenuation.
 - Enhanced natural attenuation through the use of an oxygen enhancer for downgradient groundwater.

Ecology Site Manager, Mr. Andy Kallus, indicated that as the property owner KCWW is a PLP, but that ExxonMobil ADCs taking the lead on the site.

East Waterway Site

The Ecology database and records identify this MTCA Site as the “East Waterway” (Facility Site ID 2733). It is listed on the state Hazardous Sites List with a hazard ranking of “2.” The Ecology CSCS database identifies the site as having confirmed sediment contamination for a range of chemicals. Ecology’s current site status is “awaiting cleanup.”

The East Waterway, which is located in an industrial area along Everett’s waterfront, was transformed into a deepwater port by dredging and filling in the early part of the last century and has provided shipping and processing facilities for timber, pulp, ship building and other industries, municipal and transportation uses. Currently, the East Waterway is primarily used for the U.S. Navy base and port-related deep water shipping operations.

A number of historical and current industrial and municipal sources have contributed to the detected contamination (Port Gardner Sediment SAP/QAPP, September 2008). Ecology has performed some sediment sampling in the East Waterway to identify areas and constituents of concern (Sediment Characterization Study in Port Gardner and Lower Snohomish Estuary, SAIC 2009). Ecology has designed Port Gardner Bay, which includes the East Waterway, as an early action high priority cleanup site under the Ecology’s Puget Sound Initiative.

KCWW and the City of Everett performed and submitted sediment sampling to Ecology and DNR to characterize sediment quality in Port Gardner Bay in the vicinity of the former Outfall 001 (in connection with decommissioning of the 50-year old mill outfall) and to provide a baseline for Outfall 100 as required by their NPDES water quality permits (Anchor 2004). The study area was south of the East Waterway. The sediment analysis, which was approved by Ecology, found there were no exceedances of any Sediment Management Standards (SMS) criteria, and Ecology determined that bioassay testing was not required. Additional discussions of Everett Mill’s wastewater discharge to the East Waterway can be found in Section 4.4.1 and 5.8.2.

As noted in Section 4.4, KCWW discontinued log rafting and chipping at the Everett Mill approximately 40 years ago. The aerial photographs in Appendix G show that Everett Mill rafted logs in the head of the

East Waterway and in the log pond on its eastern shore. The former is not an area where the Ecology studies (SAIC 2009) have identified high levels of woody debris in the sediments, and the mill's long pond was filled to upland in the late 1970s. The aerial photographs since the 1970s show continued log rafting in the East Waterway, including intensive log rafting during the 1980s and 1990s.

4.3 Physical Setting

Published geologic and hydrogeologic information was reviewed to assess soil and bedrock types, regional groundwater flow direction, and groundwater sources in the area. The United States Geological Survey (USGS) 7.5-minute quadrangle map was used to identify general land features in the area of the Subject Property to evaluate the local topography and estimate shallow groundwater flow direction.

The United States Department of the Interior Geologic Survey 7.5-minute series topographic map (Everett, Washington Quadrangle map dated 1973) shows that the Subject Property is approximately 10 feet above mean sea level. The general area of the Subject Property is located within a historic tidal zone of the East Waterway. The Mill topography gently slopes toward the East Waterway from the southeast corner of the site to the north and west.

Based on the subsurface assessments and investigations performed on the Subject Property, the shallow (one to five feet below ground surface) groundwater flow beneath the Subject Property flows toward the west to northwest. However, natural and man-made features and underground utilities, such as sanitary/storm sewer piping systems, may be influencing the direction of local groundwater flow.

Soil borings performed at the site have indicated varying thicknesses of fill ranging in depth from 20 to 27 feet deep. The fill material is comprised of silty sandy gravel with demolition debris, cinders, ash, and wood chips. Under the fill soils are Quaternary outwash deposits comprised of inter-bedded clay, silty fine to medium sand.

4.4 Historical Use Information

The objective of consulting historical sources is to develop a history of the previous uses of the Subject Property and surrounding area in order to help identify the likelihood of past uses presenting RECs in connection with the Subject Property.

Aerial Photographs

AECOM reviewed EDR and City of Everett file aerial photographs of the Subject Property and surrounding properties. Aerial photographs dated 1941, 1952, 1956, 1968, 1971, 1981, 1990, and 2006 were reviewed. A description of observations for the Subject Property on the photographs is provided below. Copies of the aerial photographs are provided in Appendix G.

| Year | Subject Properties Features |
|------|---|
| 1941 | The pulp mill is visible with several outbuildings and a possible AST in the location of the current warehouse/distribution facility. The property to the north is undeveloped, a railroad track occupies the property to the east, and several outbuildings can be observed on the property to the south. Log rafts can be observed in the East Waterway. A white effluent discharge is observed coming from the Outfall 003 of the Subject Property just west of the pulp mill. Log rafts are visible entirely in the head of the waterway and in the log pond on the east side of the waterway. Logs are being hauled out of the east side of the waterway for chipping at upland mill facilities. |
| 1952 | The pulp mill has expanded to the west with the addition of the pulp storage building to the north, with the No. 7, 8, and 9 boiler house and chip screening building. The log pond and chipper are visible. Two ASTs are visible in the location of the former bunker oil AST farm. Four ASTs are visible on the ExxonMobil ADC properties to the south. Otherwise, the adjacent properties have not changed from the 1941 aerial photograph. |
| 1956 | The tissue mill is now visible on the north end of the Subject Property along with several outbuildings. The water filtration building is now located on the east side of the Subject Property, and the former bunker oil AST farm has increased to four ASTs. The northern edge of the log pond has been partially filled. Residences have been demolished on the east side of West Marine View Drive adjacent to the Everett Mill, and two parking lots have been developed. The Naval Reserve Center can be observed to the north of the Subject Property. |
| 1968 | The distribution warehouse is now visible and the tissue mill has expanded to its current configuration. The primary clarifiers are now visible on the east end of the Subject Property, and the barge unloading dock is visible on the west end. Log storage is visible on the property north of the Naval Reserve Center. Except for a third block of residential demolition south of the two parking lots, the adjacent properties have not substantially changed from the 1956 aerial photograph. |
| 1971 | No changes from the 1968 aerial photograph. |
| 1981 | The secondary clarifiers and aeration basin are present on the property north of the Naval Reserve Center. The log pond is being filled to upland for chip and hog fuel storage. Log rafting (not associated with Everett Mill) continues to be visible on the west side of the Inner Harbor. No other changes are noted from the 1971 aerial photograph. |

| Year | Subject Properties Features |
|-------------|--|
| 1990 | This photograph shows the bunker oil AST farm now has only two ASTs and the TREX AST and the diesel AST are now visible in their current locations. Sulfite recovery boiler (Boiler No. 10) is visible and the log pond is filled. Large areas of log rafting are visible in the Inner Harbor, including within the former finger pier area south of the Navy Base, which is under construction. Other than the Navy Base, the adjacent properties have not changed from the 1981 aerial photograph. |
| 2006 | The photograph shows the Subject Property and adjacent properties in their current configuration. The new biomass barge pier and conveyor system (built for the PUD cogeneration facility) are visible adjacent to the chip pile area. Substantial log rafting unrelated to any haul out at the Everett Mill continues to be visible in the adjacent East Waterway. |

Kroll's Maps, Everett Public Library

A review of Kroll's maps at the Everett Public Library was conducted. A description of observations for the Subject Property on the maps is provided below.

| Year | Subject Property Features |
|-------------|--|
| 1892 | The Subject Property is labeled as tidal flats. |
| 1929 | The Soundview Pulp Mill is located on the south half of the Subject Property and remaining parts of the site are tidal flats. |
| 1947 | The Naval Reserve Center and filled land are labeled on the Atlas in the location of the north end of the Subject Property. The Associated Oil AST farm is located on the south end of the Subject Property. |
| 1963 | The mill is now labeled Scott Paper. |

Historical Fire Insurance Maps

Sanborn maps were available for the south half of the Subject Property. A copy of the historical map report from EDR is included in Appendix H.

| Year | Subject Property Features |
|-------------|--|
| 1950 | The pulp mill, No. 7, 8, and 9 boiler house, and water filtration plant are in-place. Transformer bank is located east of the boiler house where the current cogeneration plant is located. A substation is identified on the NE corner of Building No. 9. Oil house and paint shop is located on the south end of Building No. 2. The Sanborn Map transite labeled the Pulp mill raised sidelights as transite on wood. Associated Oil Company is listed where the current distribution/warehouse building is located. The Associated Oil Company facility is comprised of a two 20,000-gal gasoline ASTs, one 5,000 barrel fuel oil AST, oil warehouse, pump house, and filling shed. Three oil ASTs operated by Standard Oil Co. are located on the east end of the property. |
| 1957 | No major changes to the mill. Associated Oil Company AST farm now has four 20,000-gallon gasoline ASTs, four fuel oil ASTs ranging in size from 5,000 to 21,002 barrels. The south adjacent ADC property now has four 20,000-gallon fuel oil ASTs and an oil warehouse. |
| 1968 | The distribution/warehouse occupies the south end of the Subject Property and has replaced the Standard Oil Company AST farm. Scott Paper is now labeled where Associated Oil Company was listed. A paint storage building is located north of the pulp mill. |

Historical Topographic Maps

AECOM requested historic topographic maps from EDR for the Subject Property as part of this Phase I ESA. EDR provided topographic map coverage for 1897, 1944, 1947, 1953, 1968, and 1973. A description of observations for the Subject Property on the photographs is provided below.

| Year | Subject Property Features |
|-------------|--|
| 1897 | This topographic map shows the Subject Property as Port Gardner. |
| 1944 | This topographic map shows the railroad tracks to the west and the pulp mill. |
| 1947 | No significant changes to the Subject Property or adjacent properties are shown. |
| 1953 | This topographic map shows that the pulp mill and the tissue mill have expanded with several outbuildings. The topographic map is labeled "Gasoline Tanks" south of the Subject Property and appears to be associated with ADC bulk plant. The Naval Reserve Center is located on the north end of the Subject Property. |

| Year | Subject Property Features |
|------|---|
| 1968 | No significant changes to the Subject Property or adjacent properties are shown other than the distribution/warehouse building is located on the south end of the Subject Property. |
| 1973 | No significant changes to the Subject Property or adjacent properties are shown. |

Copies of the historic topographic maps are provided in Appendix I.

4.4.1 Summary of the Subject Property History

The following Subject Property use summary was developed by AECOM from interviews; and a review of historical aerial photographs, city directories, topographic maps, records review, and information obtained from the owner and the City of Everett.

The historical use of the Subject Property could not be determined prior to 1892. Based on City of Everett Assessor and library records, the Subject Property was tidal flats for the Puget Sound until the early 1900's when the Subject Property began to be filled. In 1927, the Puget Sound Pulp and Timber Company were founded, and in 1936 the Soundview Pulp Company assumed ownership. The pulp mill began operation in 1931 with five digesters and two pulp drying machines. Wastewater was discharged through Outfall 003 located on the shoreline bank of the Subject Property.

In 1951, Soundview Pulp Company merged with Scott Paper Company. In 1951, the mill constructed a new wood-stave outfall (Outfall 001) in conjunction with the Weyerhaeuser mill located south of the Everett Mill which conveyed effluent from both mills to the deep waters of Port Gardner Bay, in addition to the continued use of Outfall 003. Four Scott Paper machines were added to the facility from 1953 to 1955. The parking lots were constructed adjacent to the mill on the east side of West Marine View Drive. The southern portion of the Subject Property was largely developed after the 1940s, including two tank farms and smaller facilities by Tidewater/Associated Oil and by Standard Oil/Chevron. The Bunker C fuel AST farm and property were purchased from Tidewater-Associated in 1957, and other property was purchased from Standard/Chevron in 1967. The current distribution/warehouse facility located on the south end of the site was constructed in 1959.

In 1963, the mill's sanitary sewers were separated from the mill's process effluents and connected to the City of Everett's system. The two primary clarifiers were constructed in 1964 to remove suspended solids from the effluent. According to a June 1994 Scott Paper letter to CH2M Hill, chipping and log rafting operations were discontinued at the mill in 1970.

In 1974, the mill constructed a sulfite recovery boiler (Boiler No. 10) to recover spent liquor from operations and to combust it for steam generation and the conversion of sulfur dioxide, which is reused in the process. The secondary clarifiers and the aeration basin were constructed in 1979 to treat high BOD waste from boiler condensates and the bleach plant. Outfall 008 was added on the shoreline bank of the Subject Property in 1979, as the third outfall, for the discharge of treated effluent from the secondary treatment clarifiers. The former log pond was filled in at this time.

In 1995, five Dutch oven wood-fired boilers were replaced with a new boiler (Boiler No. 14), which is owned by the PUD. Also In 1995, the PUD built the biomass fuel shipping pier and related conveyors, which it owns and which is used by the Everett Mill as well. In the mid-1990's, Scott Paper, working with

the Navy, razed the former Naval Reserve Center (formerly located just south of the Everett Mill's secondary clarifiers) which consisted of offices, garage, boiler room, flammable storage shed, diesel AST, gasoline UST, machine/wood shop, classroom, and a gun range. The area is currently paved for semi-truck parking. In the late 1990's the Bunker C fuel AST farm located just north of the distribution/warehouse building was abandoned by removal.

In 2004, KCWW constructed a deep water outfall (Outfall 100) that replaced Outfall 001, which was plugged and demolished in the nearshore area. Outfall 100 became fully operational in 2005. Use of Outfalls 003 and 008 were discontinued except for emergencies, as authorized in the Everett Mill's NPDES permit. The HR/Safety/Medical Building was razed in the late 2009. Kimberly-Clark Corporation and Scott Paper Company merged in December 1995. On March 25, 1996, Kimberly-Clark was registered as owner of the Everett Mill, and KCWW, a wholly-owned subsidiary of Kimberly-Clark Corporation, is the current owner.

4.5 Previous Environmental Reports

AECOM performed a review of KCWW environmental files. A summary of significant reports not previously described in the records review are provided below.

Technical Memorandum, "Auto Shop Sump Drainage Area Soil Investigation," August 8, 1990

- SEA conducted subsurface soil sampling at the hog fuel pile area outside the north wall of the Heavy Duty Shop located in the northwest corner of Building 5. The Technical Memorandum indicated the spill occurred when the shop's sump diverted oily-water from the wastewater treatment system to the hog fuel pile. A test pit was advanced to a depth of approximately six feet. Oil saturated woodchips and sand was observed to depth of 3 feet. A sample of the oil saturated soil was collected and analyzed for TPH with a result of 2200 mg/kg. TPH was not detected for two soil samples collected below the stained soil. The report recommended the excavation of all visibly stained soil. The Technical Memorandum was submitted to Ecology on August 20, 1990.

Technical Memorandum, "Oil-Contaminated Soil Cleanup Field Memo," EcoChem, Inc., May 22, 1991

- Excavation in the area of the test pit, north of the Heavy Duty Shop, proceeded horizontally and vertically to the limit of visible contamination. Approximately 40 to 50 cubic yards of material was removed from an area approximately 15 feet by 30 feet. This memorandum was forwarded to Ecology on May 28, 1991.

Landau Associates, Inc., "Soil and Groundwater Investigation Former Underground Petroleum Storage Tanks," April 18, 1991

- UST Nos. 68, 70, 71, 72, and 73 were removed in November 1989.
- Analytical results of samples collected around former USTs Nos. 68, 70, 71, 72, and 73 indicated releases to the subsurface.
- Site investigations consisted of seven borings converted to monitoring wells.
- Sampled soil and ground water from each location and analyzed the sample for TPH and/or BTEX.
- Soil and groundwater contamination was localized by the former USTs.
- Approximately 1 inch of free product was observed on a sump placed within the 71, 72, and 73 UST excavations. Free product was not observed in the adjacent monitoring wells.

- Conclusion of the report indicated that the releases from the USTs were not an immediate threat to human health and the environment.

Additional discussion of UST status is in Section 5.4.

Dick Abrams Scott Paper Memorandum, "Site Cleanup Actions," August 3, 1994

- Provides a summary of the current status of the xylene UST No. 29. The Memo recommended discontinuing the soil vapor extraction (SVE) system.
- Provides a summary of contamination encountered during the excavation of a utility line. The contamination appeared to be in the location of a former paint shop and was described as paint thinner, gasoline or xylene. A sample of the "liquid" was collected and analyzed. 4-isopropyl toluene was principal compound detected. The Memorandum recommended moving forward with a site investigation prior to contacting Ecology.

Landau Associates Inc., Groundwater and Soil Environmental Investigation Vicinity of Former Paint Shop, September 1994

The report summarizes an August 1994 site investigation of the solvent impacts encountered during the excavation of a utility line in the area of the former Paint Shop. The site investigation consisted of seven soil borings with the collection of eleven soil samples and the collection of seven groundwater samples. Field observations did not indicate evidence of solvents and none of the soil and groundwater samples analyzed exceeded MTCA Method A clean up levels. Conclusion of the report indicated the detected release in the area of the utility trench was localized and does not appear to be a threat to human health or the environment and remediation does not appear to be warranted.

Kimberly-Clark letter to Department of Ecology, December 13, 1999

The December 1999 letter summarizes activities associated with petroleum impacted soil encountered during construction of a new bleaching tower. Samples of the contaminated soil were sent to a laboratory for analysis. The results of a "Northwest TPH-Dx" test indicated that the release appeared to be heavy fuel oil. The letter indicated the source of the oil is an abandoned pipeline which runs through the area. KCWW moved forward with 15 cu. yd. soil excavation. The letter concluded the contamination is localized due to the lack of contamination detected in tests performed north of the site in 1994 and tests performed to the south in 1997 and additional remedial measures are not warranted.

Aspect Consulting Memorandum, "Latex Spill Investigation," October 28, 2009

Aspect Consulting evaluated the latex spill, including sampling and analysis of leachate from the spilled product.

- Leachable concentration of vinyl acetate in the pure latex product is less than the conservative drinking water-based screening level.
- The formaldehyde leachate concentration of 5 mg/L exceeds the surface water screening level of 1.6 mg/L by a factor of approximately 3.
- The Memo concluded that major attenuation processes are expected to include biodegradation and physical mixing/dispersion, particularly closer to the shoreline where tidal influence on groundwater flow will increase dispersion and mixing. Since the spill location is roughly 400 feet from Puget Sound (the point of compliance for surface water screening levels), at least a 10-fold attenuation of the measured leachable formaldehyde concentration (to below the surface water screening level) is likely. The Memo also concluded the spilled

product poses negligible risk to human health or the environment and the additional remedial action would be impracticable.

Crete Consulting, Inc., "Soil Characterization –Sand Filter 1 Foundation Excavation," January 14, 2011

Soils were excavated for the foundation for Sand Filter 1, which was constructed within a building in the area of the Dutch Ovens 1 through 5. Some of the excavated material was identified as potentially consisting of spent sulfite liquor. The soils were characterized for proper landfill disposal. Results of the profiling detected arsenic (35.4 mg/kg) and cadmium (5.21 mg/kg) above MTCA Method A soil cleanup levels but were found acceptable for landfill disposal. Further soil investigation was not performed. The area within the building was restored with an impervious surface.

5.0 Information from Site Reconnaissance

5.1 Methodology and Limiting Conditions

Mr. Andrew Mott, Hydrogeologist/Project Manager, conducted a site reconnaissance of accessible areas on the Subject Property from February 28 to March 3, 2011. AECOM's objectives were to visually inspect the area for evidence of site contamination and the presence of hazardous or regulated substances. AECOM accomplished these objectives through a site inspection (visual observation), interviews, and record reviews. Photographs of the site reconnaissance are included in Appendix K.

5.2 Subject Property Observations

At the time of the site reconnaissance, no evidence of stained soil; stressed vegetation; strong, pungent, or noxious odors; waste treatment pits, water supply or potable wells, and monitoring wells; or landfilling activities was observed on the Subject Property, except as described below. AECOM did not observe pesticide or herbicide storage or use on the Subject Property. Key observations during the walkover are noted below:

- Petroleum product and sheen was observed on water weeping through cracks in the asphalt area adjacent to the south side of the distribution/warehouse building. Based on discussion with the Mill's Environmental Staff and review of Ecology records (Section 4.2) the petroleum product is associated with the ExxonMobil ADC Site.
- De minimis hydraulic fluid stains at a pulp press in building 4 were noted on a concrete pad, which was in good condition.
- De minimis SSL was noted on the asphalt in the SSL Washer Building. The SSL appeared to be leaking from a process line to the asphalt and then to a u-drain, which according to Mr. Chapin Brackett ran to the WWTP. The asphalt was observed to be in good condition and the SSL was directed to the WWTP.
- De minimis hydraulic fluid stains were noted on the floor of the Chip Silo Building No. 39, which was in good condition.
- De minimis oil staining was observed in the sump and concrete floor for the used oil room in Building No. 4. The sump and floor were in good condition.
- De minimis Hydraulic oil fluid was noted on an asphalt paved area under the hog fuel stoker. The hydraulic fluids are currently contained in a 55-gallon drum and oil absorbent pads on the paved surface. Based on an interview with Environmental staff, hydraulic fluids from the Stoker could historically be present on this paved section where two catch basins are located and which experienced drainage problems in the past. However, no staining around the catch basins was observed during the walk over.
- Petroleum staining was visible around and in a catch basin located in the Heavy Duty Shop. Water and petroleum product were observed in the catch basin along with a sump pump. Based on an interview with Mr. Chapin Brackett, historically the sump pump would discharge from the catch basin to pipe located on the western exterior wall of the shop. Staining was observed on the outside concrete foundations below the sump discharge. The sump pump discharge was connected to the WWTP in 2008.

- Hydraulic fluids were observed on the interior floor and staining was observed on the interior and on a small area of the exterior south wall of the Rail Car Dumper hydraulic system building. Staining was observed on the ground surface next to the unpaved area on the south side of the building. Mr. Chapin Brackett indicated that a pipe in the lower exterior south wall has been identified and plugged to assure the integrity of the secondary containment function of the building.
- Hydraulic fluids were observed in a containment vault adjacent to the Rail Car Dumper. A gate valve and pipe were observed in the base of the containment vault. According to Mr. Chapin Brackett, a valve failure resulted in the release of two gallons of hydraulic fluids to the East Waterway in 1995. Review of Ecology ERNS listings confirmed that ERNS No. 547098 was a release of two gallons of hydraulic fluid from a containment structure to the water on March 26, 2005. ERNS No. 547098 is closed out. The valve and pipe equipment were modified in 2005 to plug the pipe that allowed the release.
- De minimis latex was observed on the ground in the area of the latex unloading facility, adjacent to the southwest corner of the Tissue Mill, after a shipment of latex was unloaded. See Section 4.5 for information on a latex spill in 2008.
- Observed an abandoned oil-water separator (OWS) located just northwest of the Tissue Mill parking lot. The OWS was installed in the 1980's to treat stormwater for the Tissue Mill parking lot storm system, which is now directed to the WWTP. The review of the OWS indicated some debris within the structure.
- Part washers containing non-chlorinated solvents were observed at various locations in the facility. A universal waste storage area was located west of the Tissue Mill. No environmental issues were noted with the part washers and waste storage area.

5.3 Hazardous Substances in Connection with Identified Uses

AECOM observed the Subject Property for evidence of hazardous substances in connection with Subject Property uses. The facility maintains a current chemical inventory, which identifies the locations and quantities of the various materials stored and used on site. Areas called Area Lube Stations where used oil drums and used oil filter element drums are stored. These areas are identified on Figure 4. Significant petroleum storage areas, which include petroleum ASTs as regulated under the Subject Property SPCC Plan are identified on the attached Figures 5 and 6. Based on review of the Subject Property, hazardous materials were generally noted to be stored or managed in a manner that minimized the potential for a release of such materials into the environmental. Many of the chemicals are stored in secondary containment structures. Used hazardous chemicals are stored within the 90-day hazardous waste storage area in the center of the Subject Property near Building 58. No spills were noted and the concrete appeared to be in good condition.

5.4 Underground Storage Tanks (USTs)

Based on discussions with Mr. Robert Waddle, the Everett facility does not have any active petroleum USTs. Based on review of regulatory records and available Everett Mill environmental files, the Subject Property has historically operated ten USTs. All ten USTs were abandoned by removal and were reported (including any detected release) to Ecology. The following discusses the historic KCWW USTs in more detail.

1. UST No. 29 – A 12,500-gallon xylene UST located just south of the Pulp Prep Building. Removed by abandonment from the Subject Property in November 1989. Soil and groundwater in the vicinity of the UST yielded elevated levels of xylene. Due to the elevated

levels of xylene, cleanup operation consisting of a vapor extraction system (VES) was initiated in 1992 and discontinued 1994. Based on review of a Scott Paper report to Ecology, dated August 19, 1994, the xylene was successfully removed from the soil in the area of the tank and xylene impacted groundwater was limited in the vicinity of the former UST. The August 1994 letter recommended no additional remedial measures and the soil vapor extraction system would be removed by October 1, 1994. Ecology responded with a letter dated August 24, 1994, which indicated the Independent clean-up efforts as described by Washington's Model Toxics Control Act are under the control of the responsible party. In 2002, the Facilities LUST I.D. No. 1627 was placed as inactive. UST No. 67 – A 12,500-gallon kerosene UST was located adjacent to UST No. 29. Impacts were not identified in association with this tank; however, the area was impacted by the release of xylene from UST No. 29.

2. UST No. 68 - A 250-gallon unleaded gasoline UST located adjacent to the north side of the South Office Annex Building was abandoned by removal in November 1989. Benzene was detected at 7.2 parts per billion (ppb) in MW-68-2, which exceeded the cleanup level of 5 ppb, and xylene at 1,700 ppb in MW-68-3 exceeded the cleanup level of 20 ppb as documented in a report titled, Soil and Groundwater Investigation, dated April 18, 1991. In conclusion, the report indicated the exceedences did not appear to an immediate threat to human health or the environment. UST No. 68R – A 500-gallon unleaded gasoline UST located north of the Distribution/Warehouse Building was abandoned by removal in November 1999. Three soil samples were collected from beneath the tank and one from beneath the pump island, which were analyzed for benzene, toluene, ethylbenzene, and xylene (BTEX) and gasoline range organic (GRO).
3. UST No. 69 – A 260-gallon leaded gasoline UST located between Buildings 29 and 37. Based on an internal Memorandum dated December 6, 1989, six soil samples and one groundwater sample were collected in association with the removal of UST No. 69. Ethylbenzene was detected in one soil sample and xylene was detected in four of the six soil samples. All of the detected compounds were below the unrestricted land use (MTCA Method A) cleanup levels for soil. The groundwater sample was analyzed for BTEX, and none of the compounds were detected. Ecology was informed of the results in a letter dated December 22, 1999.
4. UST No. 70 – A 1,000-gallon diesel UST abandoned by removal in November 1989 was located south of the existing hog fuel stockpile. Analytical results of sample collected during the initial excavation work around the UST indicate that release had occurred. Three soil borings were advanced in the area of the UST and then converted into monitoring wells. Based on results of the site investigation, the April 18, 1991 report concluded “An Immediate Threat to Human Health and the Environment Does Not Appear to Exist at Former Tank 70.”
5. UST No. 70R – A 2,000-gallon diesel UST was installed in the same location of UST No. 70 in 1989 and was abandoned by removal in 1995. The UST was double walled with cathodic protection and electronic overflow sensor.
6. UST Nos. 71, 72, and 73 – Three 12,250-gallon USTs containing Bunker C fuel were abandoned by removal in 1989. The USTs were located just south of Building 60. Analytical results of soil and groundwater samples collected from the three USTs and field observations indicated a release of Bunker C fuel. A limited soil excavation was performed around the UST area to the extent practicable. However, an April 18, 1991, Soil and Groundwater Site Investigation report indicated some soil containing Bunker C fuel was not removed because of underground utility lines and structures. A sump was installed within the UST excavation and approximately one inch of Bunker C product was observed within the sump. A monitoring well (MW-70-1) was installed downgradient from the excavation. The April 2002 report indicated

MW-70-1 did not have detectable levels of total petroleum hydrocarbons (TPH) in the soil or groundwater samples collected from this well. The April 18, 1991 Soil and Groundwater Site Investigation report was submitted to Ecology on April 30, 1991; Additional action was not pursued by Ecology and the LUST I.D number for the Subject Property was inactivated in 2002. .

Two additional USTs were located on the Subject Property, but were associated with the Navy Reserve Center. They were listed as removed in 1996 with an interaction end date of May 3, 2000. No additional information regarding this UST was available; however, a KCWW Memorandum, dated October 29, 1997, indicated that the US Navy remediated the site to below Model Toxics Control Act (MTCA) soil and groundwater cleanup standards.

It should be noted that KCWW submitted all site investigation results to Ecology and the Subject Property's LUST I.D. No. 1627 was inactive in 2002. As such, the former USTs with associated releases are considered HRECs. However, a final delisting or no further action letter has not been received from Ecology for each site.

5.5 Aboveground Storage Tanks (ASTs)

The Everett Mill maintains many ASTs throughout the facility. The majority of the ASTs are located within the interior operational area and store materials such as hydraulic fluids, lubricating oils, silicon, and process chemicals. ASTs located on the site are generally located within secure secondary containment berms/basins, and are inspected annually per the Mill's SPCC Plan. Figures 5 and 6 depict the locations of the ASTs.

5.6 Indications of Polychlorinated Biphenyls (PCBs)

For informational purposes, PCB-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. The use, manufacture, and disposal of PCBs are regulated by the Toxic Substances Control Act (TSCA), 40 CFR, Part 761. The regulations are, in part, based upon the relative PCB concentration, i.e., <50 parts per million (ppm), >50 ppm to <500 ppm, and >500 ppm. The production of PCBs in the United States began in 1929 and ended in 1977.

The facility removed significant PCB-containing equipment including lighting ballasts, capacitors, and transformers between 1995 and 2004. A review of an October 24, 1998 technical memorandum prepared by Safety-Kleen indicated that a surficial clean-up of concrete was not effective in reaching EPA PCB clean up levels (10µg per 100 cu.cm.) for concrete for substations 3/4 and 5/6. Transformer stations 3/4 and 5/6 exceeded PCB clean up levels (10µg per 100 cu.cm.) and concrete removal was recommended. A February 2, 1999 fax from Safety-Kleen indicated that soil samples collected below the 5/6 pad were below clean up levels. Confirmation samples indicated soils were between 1.4 and 3.4 mg/kg for PCBs below MTCA cleanup levels (10.0 mg/kg). Based on an interview between Mr. Chapin Brackett and a former employee (Mr. Rich Parson), the concrete below substation 3/4 was cleaned below EPA PCB clean up levels (10µg per 100 cu.cm.) for concrete.

Smaller PCB-containing equipment, such as capacitors and light ballasts continue to be removed. A suspected PCB containing transformer is located in the Chip Loft and is labeled Chip Loft 25 KVA Transformer, MCC 215-2A. A photograph (Photo 14) of this transformer is provided in Appendix K.

5.6.1 Transformers/Equipment

Electrical transformers are located within a curbed area and all except Substation 36 are located within a building. The locations of electrical transformers greater than 55-gallons are located on Figure 7.

5.6.2 Fluorescent Light Ballasts

Fluorescent light ballasts contain capacitors that may be filled with PCB-containing dielectric fluid. Typically, light ballasts without labeling stating "No PCBs" will contain PCBs. Based upon the age of the building, there is the potential that the light ballasts at the Subject Property contain PCBs. An inspection of individual ballasts was not included within the scope of this assessment.

5.7 Indications of Solid Waste Disposal

AECOM observed the Subject Property for solid waste management issues, including generation and disposal methods. General trash, including office trash, break room wastes, and packaging materials is discarded in appropriate trash dumpsters found throughout the Subject Property.

5.8 Water

5.8.1 Potable Water

The Subject Property receives their potable water supply from the City of Everett.

5.8.2 Wastewater

Currently, the process wastewater from the Mill is treated via the Mill's WWTP. Prior to 1951 the mill discharged all of its effluent via a single discharge point to the East Waterway via Outfall 003. In 1951, the mill constructed new deep water Outfall 001 in conjunction with the Former Weyerhaeuser Mill, which conveyed SSL from both mills to the Port Gardner Bay.

A primary treatment system was constructed in 1964 to remove total suspended solids. SSL was recovered by the mill when Boiler No. 10 was constructed in 1974. The secondary clarifiers and the aeration basin were constructed in 1979 to treat high biological oxygen demand (BOD) waste from boiler condensates and the bleach plant. Outfall 008 was constructed in 1979 to discharge effluent from the new clarifiers and aeration basin.

Currently, all of the Mill's effluent is discharged through the combined City of Everett and KCWW Outfall 100, which was constructed in 2004. Outfall 100 is managed under NPDES Permit No. WA 000062-1. However, the Mill has retained use of Outfall 003 and Outfall 008 for emergency discharge of treated water.

Sludge from the WWTP is recovered at the sludge dewatering building and transported off-site or incinerated within Boiler No. 14. Catch basins and u-drains within and outside the facility are all directed to the WWTP except for the areas identified in Section 5.8.3.

5.8.3 Stormwater

The majority of stormwater generated within the Everett Mill is collected and conveyed to the WWTP, except for the far west and southwestern ends of the Subject Property, which are directed toward the East Waterway via storm drains and sheet flow. All active stormwater discharges are managed under NPDES Permit No. WA 000062-1. The north end of the Subject Property is directed toward City of

Everett storm sewers via storm drains. A vast majority of the chemical processes and handling are located within areas for which the stormwater is collected via catch basins, u-drains, and building roof drains that are treated at the WWTP. Figure 8 depicts current surface drainage.

5.9 Adjoining/Adjacent Properties Observations

AECOM observed properties immediately adjoining the Subject Property during the site reconnaissance. The adjoining properties were observed, to the extent possible, from the Subject Property boundaries and/or public ROW for readily apparent indicators of potential environmental impairment. Adjacent property uses are industrial, which includes the Everett Navel Station to the north, Burlington Northern Santa Fe (BNSF) Railway to the east, and Dunlap Towing to the southwest with the Port of Everett beyond the Dunlap Towing property. The Port of Gardner Bay (East Waterway) is adjacent to Everett Mill to the west and to the ExxonMobil ADC parcels to the south, which are currently used for parking. Monitoring wells that are associated with the on-going ExxonMobil ADC Site were observed on the adjacent south parcels.

5.10 ASTM E 1527, Section 12.1.4, Non-Scope Items

5.10.1 Lead-Based Paint

A review of the structures for lead-based paint was made during the site visit. Original construction of the many of the buildings date back to the early or mid 1900's with the most recent buildings constructed in the mid-1990's. The buildings on the Subject Property were painted with various colors and layers of paint. Several structures were painted with a common green or blue colored paint. Photo No. 10 in Appendix K depicts the green paint on a metal support for the main conveyor system. Several painted surfaces were observed to be in poor condition with chipped or peeling paint. Photo No. 22 depicts peeling paint on the ceiling of Building No. 10. Painted surfaces that may contain leaded paint also include: ASTs, silos, conveyor tunnels, and the barge wood chip conveyor system (Photo No. 26). Red painted fire suppression piping was observed throughout the Subject Property's facilities and may contain lead-based paint.

An interview with Mr. Jim Ketchum (Asbestos and Lead Paint Records Coordinator) indicated a lead paint assessment was performed on various painted surfaces of the Mill from 2008 to 2009. The lead paint assessment was performed by using a swab sampling technique. Results of the sampling can be found in Appendix J.

5.10.2 Asbestos Containing Materials (ACMs)

AECOM observed building materials that have the potential to contain asbestos. These items included linoleum flooring (Photo No. 2), siding (Photo No. 8), roofing material (Photo No. 15), pipe wrap (Photo No. 21), several furnaces and associated pipe wrap (Photo No. 25), and ceiling tiles (Photo No. 37). Mr. Jim Ketchum indicated that an ACM survey was original performed in 1988 on various areas of the Subject Property. Mr. Jim Ketchum also indicated that ACMs can be found as transite piping, transite siding, galbestos siding, gaskets, roofing, and vinyl tiles. He also indicated significant amounts of ACMs can be found in and around boiler No. 10 and the water filter building. AECOM performed a review of the Kimberly-Clark Asbestos Manual, dated December 1988, updated May 1996 and April 2010 which indicated the following:

- The manual established a procedure to identify, repair, or remove ACMs.
- Identified Walker Specialty Construction and Nuprecon Inc. as primary ACM contractors.

- ACMs are transported and disposed at the Rabanco Roosevelt Regional Landfill or the Northern Wasco County Landfill.
- Asbestos free materials are labeled blue.
- Assumes all thermal system insulation, sprayed on and troweled-on surface material, asphalt roofing, and vinyl flooring installed no later than 1980 must be treated as potential ACM.

In 2002, an asbestos survey was performed by Three Kings Environmental, Inc on buildings 1 through 35, 41, 43 through 46, 80, 82, 86, 96, methanol tank area, and various outside areas throughout the Subject Property. Additional ACM surveys were performed from 1998 to 2010 that meet the "Good Faith" asbestos inspection requirements as per Washington Administrative Code (WAC) 296-62-077707. Results of the asbestos surveys are summarized on the attached tables in Appendix J.

5.10.3 Radon

Based on a review of radon data provided by the attached EDR report (Appendix E), Snohomish County is located in Federal Radon Zone 3 with average radon levels of less than 2 picocuries per liter (pCi/L). The reported concentration is below the EPA 4.0 pCi/L level that is recommended for additional testing depending on building construction.

6.0 Interviews

6.1 Interview with Owner

AECOM interviewed Mr. Robert Waddle (Environmental Team Leader), Mr. Chapin Brackett (Environmental Engineer), Mr. Jim Ketchum (Asbestos and Lead Records Coordinator), and , Mr. Richard Abrams (former Environmental Team Leader) as part of the Phase I ESA. Based on the interviews, historical ownership information, historical and current operations, and environmental impacts were provided for the Subject Property. Information obtained during the interview process has been incorporated as appropriate throughout the report.

6.2 Interview with Site Manager

Refer to Section 6.1.

6.3 Interviews with Occupants

Refer to Section 6.1.

6.4 Interviews with Local Government Officials

AECOM interviewed local government officials and reviewed local government records as part of this Phase I ESA (refer to Section 4.2 of this report). In addition, Mr. Andrew Kallus of the State of Washington Department of Ecology Toxics Cleanup Section was interviewed regarding the ExxonMobil ADC Site (refer to Section 4.1 of this report). Mr. Kallus was not interviewed in regards to the East Waterway. However, a copy of the 2008 bay wide sediment study was requested. AECOM has not received a copy at the time of the finalization of this report.

7.0 Findings and Opinions

7.1 HRECs and RECs

Table 1 and 2 summarizes AECOM's findings and opinions regarding HRECs and RECs for the Subject Property. Table 1 and 2 explain the logic and reasoning for finding these conditions to be HRECs or RECs.

7.2 De Minimis Conditions

This assessment has revealed the following *de minimis* conditions in conjunction with the subject properties.

- *De minimis* hydraulic fluid stains at a pulp press in Building 4 were noted on a concrete pad, which was in good condition.
- *De minimis* SSL was noted on the asphalt in the SSL Washer Building. The SSL appeared to be leaking from a process line to the asphalt and then to a u-drain, which according to Mr. Chapin Brackett ran to the WWTP. The asphalt was observed to be in good condition and the SSL was directed to the WWTP.
- *De minimis* hydraulic fluid stains were noted on the floor of the Chip Silo Building No. 39, which was in good condition.
- *De minimis* oil staining was observed in the sump and concrete floor for the used oil room in Building No. 4. The sump and floor were in good condition.
- *De minimis* latex spill was noted in the area of the latex off-loading area.
- *De minimis* oil staining was observed on a paved asphalt area under the Hog Fuel Stoker. The paved area drains to two catch basins which drain to the WWTP.

7.3 Other Environmental Issues

The Everett Mill dates back to approximately 1927 and operations conducted at this facility over the past 84 years have utilized a number of hazardous materials and petroleum products. It is possible that impacts from these practices may exist on portions of the site. Over the years of operations, fill soils have been placed on the property and observed in soil borings performed on the Subject Property. This material was described as demolition debris, ash, and wood processing waste. As such, the long term industrial use of the Subject Property and presence of historical fill soils indicate a potential that other environmental issues may exist upon or near the Subject Property.

7.4 ASTM Non-Scope Items

AECOM was requested to perform several ASTM E1527 non-scope items, which include observations for ACMs and lead paint, and review of radon. ACM surveys have been performed on the Subject Property from 1988 to the present. ACM's were observed during AECOM's site review on structures throughout the Subject Property. These items included vinyl tiles, siding, roofing material, pipe wrap, and ceiling tiles.

A lead paint survey was performed on various painted surfaces from 2008 to 2009. The assessment detected lead paint on various surfaces throughout the Subject Property. AECOM also observed possible lead paint on ASTs, silos, and conveyor tunnels and supports.

ACMs and lead paint are considered environmental issues to the Subject Property. The Subject Property is in a Federal Radon Zone of 3 with average radon levels of less than 2pci/L. Radon is not considered a REC or environmental issue for the Subject Property.

A suspected PCB containing transformer is located in the Chip Loft and is labeled Chip Loft 25 KVA Transformer, MCC 215-2A.

7.5 Data Gaps

A data gap is considered the lack of or inability to obtain information required by ASTM E 1527-05 despite good faith efforts by AECOM to gather such information. A data gap by itself is not considered significant. The following data gaps were identified during performance of the Phase I ESA. The significance of each data gap is discussed below, as well as data failures, if any.

- Chain of title information for the Subject Property was not part of the scope of this Phase I ESA. Given the historical use of the Subject Property and past ownership information provided by historical resources, the inability to assess chain of title information is not considered a significant data gap.
- An Environmental Lien search and Activity and Use Limitation (AUL) search was not part of the scope of this Phase I ESA. The Everett Mill's response to the owner's questionnaire indicates there are no environmental liens on the property. Given the historical use of the Subject Property and past ownership information provided by historical resources, the inability to access this information is not considered a significant data gap.
- AECOM did not review files at the Snohomish County Health Department. Given the review of the Standard Environmental Records Sources, Records at the Everett Mill, Ecology Records, and City of Everett Records, the non-review of the Snohomish County Health Department records is not considered a significant data gap.
- Per ASTM, interviews of past owners, operators, and occupants of the Subject Property, who are likely to have material information regarding the potential for contamination at the Subject Property, shall be conducted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. AECOM obtained historical property information from site representatives and review of historical documents. According to this information, the Subject Property was an undeveloped tidal area prior to 1890, and in 1929 was developed with the Everett Mill. Thus, based on the use of the Subject Property and surrounding area, and because interviews with past owners of the Subject Property were impractical, past owners were not contacted. This data gap does not represent a significant limitation to this investigation, in AECOM's opinion.

8.0 Conclusions

AECOM has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-05 of the Subject Property. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

Historical RECs

The Phase I ESA has identified the following HRECs in conjunction with the Subject Property as noted in Section 7 and described on Table 1.

1. UST removals – Based on review of Washington Department of Ecology (Ecology) records, ten underground storage tanks (USTs) were operated on the property at various times. In November 1989, eight USTs (Nos. 29, 67, 68, 69, 70, 71, 72, and 73) were removed from the property and Ecology was notified of fuel releases from UST Nos. 29, 68, 70, 71, 72, and 73 in December 1989. Additional USTs were removed in 1995 (70R) and in 1999 (68R). In 2002, the Facilities LUST I.D. No. 1627 was classified as inactive. The releases associated with the USTs are considered a HREC to the Subject Property due to the inactive LUST I.D. number and the resulting No Further Action review by Ecology.
2. Naval Reserve Property – KCWW exchanged a KCWW-owned property located north of the current north end semi-truck parking area for a Navy owned parcel (Naval Reserve Center Property) located just south of the secondary clarifier and aeration basins with the Navy in the mid-1990's. The US Navy remediated the site to below MTCA soil and groundwater cleanup levels, making the site an HREC with regard to the Subject Property.
3. Bleaching Tower area – A December 1999 letter report summarizes activities associated with petroleum impacted soil encountered during construction of a new bleaching tower. The letter concluded the contamination is localized due to the lack of contamination detected in tests performed north of the area in 1994 and tests performed to the south of the area in 1997. Based on the 1999 analysis showing that petroleum-contaminated soils encountered during construction of a new bleach tower from an abandoned pipeline are localized, were removed, and additional remedial measures are not warranted the detected release is considered an HREC with regard to the Subject Property.
4. PCB Transformer – PCB sampling at transformer stations 3/4 and 5/6 exceeded EPA PCB clean up levels (10µg per 100 cu.cm.) for concrete, and concrete removal was recommended by Safety-Kleen. The release of PCBs is considered an HREC based on confirmation sampling indicating residual soils at substation 5/6 were between 1.4 and 3.4 mg/kg PCBs below MTCA cleanup levels (10.0 mg/kg). Based on an interview between Mr. Chapin and a former employee (Mr. Rich Parson) they indicated the concrete below substation 3/4 was cleaned to EPA PCB clean up levels for concrete.
5. Former Paint Shop – A Scott Paper Memorandum dated August 3, 1994 indicated that contamination described as paint thinner, gasoline or xylene was encountered during the excavation of a utility line in the area of a former Paint Shop. A site investigation indicated the release is localized and additional remedial measures are not warranted. Based on the results of the site investigation, the contamination encountered in the area of the former Paint Shop is an HREC.

6. Rail Car Dumper Containment Vault Valve – A valve failure resulted in the release of two gallons of hydraulic fluid to the East Waterway in 1995. The spill was contained, cleaned up, and inspected by Ecology, and the matter closed (ERNS No. 547098). Consequently, the Rail Car Dumper Containment Vault is considered an HREC with regard to the Subject Property.

Based on current information, these HRECs are no longer considered current RECs in connection with the Subject Property.

RECs

This assessment has identified the following RECs in conjunction with the Subject Property as noted in Section 7, described on Table 2 and shown on Figure 3.

ExxonMobil ADC Site

1. Petroleum product and sheen was observed on water weeping through cracks in the asphalt area adjacent to the south side of the distribution/warehouse building on the Subject Property. Based on discussion with the Mill's Environmental staff and review of Ecology records, the petroleum product is associated with the ExxonMobil ADC Site, which is an ongoing MTCA cleanup site (Facility Site ID No. 2728) adjacent to the Subject Property. Because petroleum contamination from the ExxonMobil ADC Site has been found on the Subject Property, the Exxon Mobil/ADC Site is considered a REC with regard to the Subject Property.

Former Oil House and Former Gasoline/Bunker C ASTs

2. The former oil house and former gasoline/Bunker C fuel oil AST farm and associated underground piping are considered a REC to the Subject Property because TPH-Oil was detected above MTCA Method A groundwater cleanup levels in Probe 13 and Probe 14, and a 1950 Sanborn Map depicted an oil house in the area of Probe 14. Based on the detected petroleum compounds and concentrations found in the area of the former oil house and former gasoline/Bunker C fuel oil AST farm and associated underground piping, and the absence of documented completed remediation, the release is considered a REC to the Subject Property.

Heavy Duty Shop Sump

3. Petroleum staining was visible around and in a catch basin located in the Heavy Duty Shop. Water and petroleum product was observed in the catch basin along with a sump pump. Staining was observed on the side of the building below the outside discharge point of the sump pump. This sump was connected to the WWTP in 2008. Based on the petroleum staining around and in the sump and knowledge of a conveyance system that could discharge to the East Waterway from the catch basin, the Heavy Duty Shop sump is considered a REC to the Subject Property.

Railcar Dumper Hydraulic System Building (south side)

4. Hydraulic fluids were observed on the interior floor and staining was observed on the interior walls and on a small area of the exterior south wall and ground surface of the Rail Car Dumper hydraulic system building next to a small unpaved area on the south side of the building. Environmental staff indicated that a pipe in the lower exterior south wall has been identified and plugged to assure the integrity of the secondary containment function of the building. Due to the hydraulic fluid staining and knowledge of a pipe that could historically have discharged to the ground surface from inside the building, the area adjacent to the south side of the Rail Car hydraulic system building is considered a REC with regard to the Subject Property.

Dutch Ovens 1 through 5

5. Soils were excavated for the foundation for Sand Filter 1, which was constructed within a building in the area of the Dutch Ovens 1 through 5. Some of the excavated material was identified as potentially consisting of spent sulfite liquor. The soils were characterized for proper landfill disposal. Results of the profiling detected arsenic (35.4 mg/kg) and cadmium (5.21 mg/kg) above MTCA Method A soil cleanup levels and were found acceptable for landfill disposal. Following the excavation, the area within the building was restored with an impervious surface. Further soil investigation was not performed to determine if the impacts were fully removed as such, the detected impacts are considered a REC to the Subject Property.

Latex Spill Area

6. In 2008, approximately 28,000-gallons of latex were released due to an undetected break in a railroad car off-loading line. Latex used as a binder in paper products is considered non-toxic, however, formaldehyde a component of latex is considered a hazardous substance. The 2008 release is considered a REC to the Subject Property.

East Waterway

7. A number of historical sources related to industrial and maritime industries and urban runoff have contributed to the detected contamination in the East Waterway. Because the Everett Mill discharged untreated effluent to the East Waterway from 1929 to 1964, as well as other historical discharges from the Subject Property to the East Waterway that might have contained constituents of concern, the East Waterway is considered a REC with regard to the Subject Property.

This assessment has revealed the following *de minimis* conditions in conjunction with the Subject Property.

- *De minimis* hydraulic fluid stains at a pulp press in building 4 were noted on a concrete pad, which was in good condition.
- SSL was noted on the asphalt in the SSL Washer Building. The SSL appeared to be leaking from a process line to the asphalt and then to a u-drain, which according to Mr. Chapin Brackett ran to the WWTP. Due to the good condition of the asphalt and the SSL was directed to the WWTP it was a *De minimis* condition.
- *De minimis* hydraulic fluid stains were noted on the floor of the Chip Silo Building No. 39, which was in good condition.
- *De minimis* oil staining was observed in the sump and concrete floor for the used oil room in Building No. 4. The concrete sump and floor were in good condition.
- *De minimis* oil staining was observed on a paved asphalt area under the Hog Fuel Stoker. The paved area drains to two catch basins which drain to the WWTP.
- *De minimis* latex spill was noted in the area of the latex off-loading area.

While not considered RECs or HRECs, the following environment issues and ASTM Non-scope items associated with the Subject Property are presented below.

- Possible ACM was noted throughout the buildings of the Subject Property.
- Possible lead containing paint was observed on structures throughout the Subject Property.

- A suspected PCB containing transformer is located in the Chip Loft and is labeled Chip Loft 25 KVA Transformer, MCC 215-2A.
- The Everett Mill dates back to approximately 1927 and operations conducted at this facility over the past 84 years have utilized a number of hazardous materials and petroleum products. Review of site investigation and geotechnical boring logs indicates fill material described as demolition debris and wood processing waste has been placed on the Subject Property.

The Phase I ESA did not identify any significant data gaps that constitute RECs.

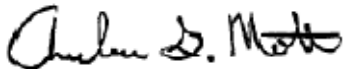

9.0 Environmental Professional Statement

As required by Section 12.13 of ASTM E1527-05, AECOM provides the following declarations:

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professionals responsible for conducting the Phase I ESA and preparation of the report.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Respectfully,

Andrew G. Mott, P.G., CPG
Project Scientist – Hydrogeologist

PORT GARDNER BAY/
EAST WATERWAY

| Inventory No. | Location |
|---------------|--|
| 1 | 1st Floor Converting - On east wall at north end of floor |
| 2 | 3rd Floor Converting - current lubrication room across aisle from FM Shop |
| 3 | 4th Floor Converting - current location on south wall of shredder room |
| 4 | Division A & B - current lubrication room on ground floor at dry end of TM1 |
| 5 | Division C - immediately west of Roll Wrapper Hydraulic Unit |
| 6 | Pulp Prep - inside shop area near restroom |
| 7 | Secondary WWT - inside Blower Building against north wall |
| 8 | Chip Handling - current lubrication room at west end of Engineering Building |
| 9 | Dry Room - southeast corner of maintenance shop |
| 10 | No Longer Used |
| 11 | Boilerhouse/Acid Plant - between #10 and #14 Boilers at current location |
| 12 | Distribution - on first floor at north side of Unitizers (near current drums) |
| 13 | Engineering Building - inside west wall at south-east corner of Machine Shop |
| 14 | Digesters - on ground floor against north wall between #11 & #12 Digesters |
| 15 | SSL Washers - ground floor of SSL Building in NW corner where currently exists |
| 16 | Screen & Bleach - 3rd Floor outside of current shop area in northwest corner |
| 17 | Screen & Bleach - north side Screened Brown Stock Chest, on ground floor |
| 18 | Dry Room Fork Trucks - northwest corner of Bale Room in current area |
| CLSR | Central Lube Storage Room - east side of Pulp/Utilities Courtyard |
| UOR | Used Oil Room - west side of Pulp/Utilities Courtyard |

Tables

**Table 1 – Everett Mill
HRECs**

**Table 2 – Everett Mill
RECs**

**Table 1
Everett Mill HRECs
Everett Mill Phase I ESA**

| HREC | HREC DESCRIPTION | Key Reference Documents/Observations/Interviews |
|---|--|--|
| 1 - UST Removals | UST removals - Based on review of Washington Department of Ecology (Ecology) records, ten underground storage tanks (USTs) were operated on the property at various times. In November 1989, eight USTs (Nos. 29, 67, 68, 69, 70, 71, 72, and 73) were removed from the property and Ecology was notified of fuel releases from UST Nos. 29, 68, 70, 71, 72, and 73 in December 1989. Additional USTs were removed in 1995 (70R) and in 1999 (68R). In 2002, the Facilities LUST I.D. No. 1627 was classified as inactive. The releases associated with the USTs are considered a HREC to the Subject Property due to the inactive LUST I.D. number and the resulting No Further Action review by Ecology. | <p>Landau Associates, Inc., Edmonds, Washington, Soil and Groundwater Investigation Former Underground Petroleum Storage Tanks Everett Pulp and Paper Mill, Everett, Washington, April 18, 1991</p> <p>McDonnell Engineering, Inc., Everett Washington, UST Removal Site Check/Site Assessment, Kimberly Clark Corporation, November 23, 1999.</p> <p>State of Washington, Department of Ecology, Lacy, Washington, LUST Cleanup Report Review, September 5, 2002.</p> |
| 2 - Naval Reserve Property | Naval Reserve Property – KCWW exchanged a KCWW-owned property located north of the current north end semi-truck parking area for a Navy owned parcel (Naval Reserve Center Property) located just south of the secondary clarifier and aeration basins with the Navy in the mid-1990's. The US Navy remediated the site to below MTCA soil and groundwater cleanup levels, making the site an HREC with regard to the Subject Property. | <p>KCWW Memorandum, dated October 29, 1997</p> <p>On-line Ecology UST Record</p> |
| 3 - Bleaching Tower Area | Bleaching Tower area - A December 1999 letter report summarizes activities associated with petroleum impacted soil encountered during construction of a new bleaching tower. The letter concluded the contamination is localized due to the lack of contamination detected in tests performed north of the area in 1994 and tests performed to the south of the area in 1997. Based on the 1999 analysis showing that petroleum-contaminated soils encountered during construction of a new bleach tower from an abandoned pipeline are localized, were removed, and additional remedial measures are not warranted the detected release is considered an HREC with regard to the Subject Property. | Kimberly-Clark letter to Department of Ecology, December 13, 1999 |
| 4 - PCB Transformer | PCB Transformer - PCB sampling at transformer stations 3/4 and 5/6 exceeded EPA PCB clean up levels (10µg per 100 cu.cm.) for concrete, and concrete removal was recommended by Safety-Kleen. The release of PCBs is considered an HREC based on confirmation sampling indicating residual soils at substation 5/6 were between 1.4 and 3.4 mg/kg PCBs below MTCA cleanup levels (10.0 mg/kg). Based on an interview with a former employee (Mr. Rich Parson) the concrete below substation 3/4 was cleaned to EPA PCB clean up levels for concrete. | <p>Safety-Kleen Special Projects, Technical Memorandum, Everett Mill PCB Decontamination Project: Substation 3 & 4 and 5 & 6 Supplemental Sampling Results, October 24, 1998</p> <p>Safety-Kleen, Fax, February 2, 1999</p> <p>Mr. Chapin Brackett, March 24, 2011 Interview with Mr. Rich Pearson</p> |
| 5 - Former Paint Shop | A Scott Paper Memorandum dated August 3, 1994 indicated that contamination described as paint thinner, gasoline or xylene was encountered during the excavation of a utility line in the area of a former Paint Shop. A site investigation indicated the release is localized and additional remedial measures are not warranted. Based on the results of the site investigation, the contamination encountered in the area of the former Paint Shop is an HREC. | <p>Scott Paper Memorandum, August 3, 1994</p> <p>Landau Associates Inc., Groundwater and Soil Environmental Investigation Vicinity of Former Paint Shop, September 1994</p> |
| 6 - Rail Car Dumper Containment Vault Valve | Rail Car Dumper Containment Vault Valve – A valve failure resulted in the release of two gallons of hydraulic fluid to the East Waterway in 1995. The spill was contained, cleaned up, and inspected by Ecology, and the matter closed (ERNS No. 547098). Consequently, the Rail Car Dumper Containment Vault is considered an HREC with regard to the Subject Property. | <p>Interview with Mr. Chapin Brackett, March 1, 2011</p> <p>State of Washington, Department of Ecology Environmental Report Tracking System, Incident Report No. 753873, March 26, 2005</p> |

**Table 2
Everett Mill RECs
Everett Mill Phase I ESA**

| REC NO. | REC DESCRIPTION | Key Reference Documents/Observations/Interviews |
|---|--|--|
| 1 - ExxonMobil American Distribution Company (ADC) | Petroleum product and sheen was observed on water weeping through cracks in the asphalt area adjacent to the south side of the distribution/warehouse building on the Subject Property. Based on discussion with the Mill's Environmental staff and review of Ecology records, the petroleum product is associated with the ExxonMobil ADC Site, which is an ongoing MTCA cleanup site (Facility Site ID No. 2728) adjacent to the Subject Property. Because petroleum contamination from the ExxonMobil ADC Site has been found on the Subject Property, the Exxon Mobil/ADC Site is considered a REC with regard to the Subject Property. | <p>Department of Ecology Letter to Kimberly-Clark, Notice of Potential Liability Status, February 7, 1997</p> <p>Department of Ecology, Publication Number 08-09-122, November 2009</p> <p>AMEC, Focused Feasibility Study Work Plan, February 26, 2010</p> <p>Jim Schneider March 16, 2011 Interview with Andrew Kallus</p> <p>Site Walk Over February 28, 2011</p> |
| 2 - Former Oil House, Gasoline/Bunker C AST | The former oil house and former gasoline/Bunker C fuel oil AST farm and associated underground piping are considered a REC to the Subject Property because TPH-Oil was detected above MTCA Method A groundwater cleanup levels in Probe 13 and Probe 14, and a 1950 Sanborn Map depicted an oil house in the area of Probe 14. Based on the detected petroleum compounds and concentrations found in the area of the former oil house and former gasoline/Bunker C fuel oil AST farm and associated underground piping, and the absence of documented completed remediation, the release is considered a REC to the Subject Property. | <p>Pacific Environmental Group, Inc., Environmental Investigation Report, April 14, 1998</p> <p>1950 Fire Insurance Map</p> |
| 3 - Heavy Duty Shop Sump | Petroleum staining was visible around and in a catch basin located in the Heavy Duty Shop. Water and petroleum product was observed in the catch basin along with a sump pump. Staining was observed on the outside of the building below the former discharge point of the sump pump. This sump was connected to the WWTP in 2008. Based on the petroleum staining around and in the sump and knowledge of a conveyance system that could discharge to the East Waterway from the catch basin, the Heavy Duty Shop sump is considered a REC to the Subject Property. | <p>Site Walk Over March 3, 2011</p> <p>Interview with Mr. Chapin Brackett, March 3, 2011</p> |
| 5 - Railcar Dumper Hydraulic System Building (South Side) | Hydraulic fluids were observed on the interior floor and staining was observed on the interior walls and on a small area of the exterior south wall and ground surface of the Rail Car Dumper hydraulic system building next to a small unpaved area on the south side of the building. Environmental staff indicated that a pipe in the lower exterior south wall has been identified and plugged to assure the integrity of the secondary containment function of the building. Due to the hydraulic fluid staining and knowledge of a pipe that could historically have discharged to the ground surface from inside the building, the area adjacent to the south side of the Rail Car hydraulic system building is considered a REC with regard to the Subject Property. | <p>Site Walk Over March 3, 2011</p> <p>Interview with Mr. Chapin Brackett, March 3, 2011</p> |
| 6 - Dutch Ovens 1 through 5 | Soils were excavated for the foundation for Sand Filter 1, which was constructed within a building in the area of the Dutch Ovens 1 through 5. Some of the excavated material was identified as potentially consisting of spent sulfite liquor. The soils were characterized for proper landfill disposal. Results of the profiling detected arsenic (35.4 mg/kg) and cadmium (5.21 mg/kg) above MTCA Method A soil cleanup levels and were found acceptable for landfill disposal. Following the excavation, the area within the building was restored with an impervious surface. Further soil investigation was not performed to determine if the impacts were fully removed as such, the detected impacts are considered a REC to the Subject Property. | <p>Interview with Mr. Chapin Brackett, February 28, 2011</p> <p>Crete Consulting, Inc., Soil Characterization –Sand Filter 1 Foundation Excavation, January 14, 2011</p> |
| 7 - Latex Spill Area | In 2008, approximately 28,000-gallons of latex were released due to an undetected break in a railroad car off-loading line. Latex used as a binder in paper products is considered non-toxic, however, formaldehyde, a component of latex, is considered a hazardous substance. The 2008 release is considered a REC to the Subject Property. | <p>Site Walk Over March 1, 2011</p> <p>Interview with Mr. Chapin Brackett, March 1, 2011</p> <p>Aspect Consulting Memorandum, Latex Spill Investigation, October 2009</p> |
| 8 - East Waterway | A number of historical sources related to industrial and maritime industries and urban runoff have contributed to the detected contamination in the East Waterway. Because the Everett Mill discharged untreated effluent to the East Waterway from 1929 to 1964, as well as other historical discharges from the Subject Property to the East Waterway that might have contained constituents of concern, the East Waterway is considered a REC with regard to the Subject Property | <p>Port Gardner Sediment SAP/QAPP, September 2008</p> <p>Ecology East Waterway Web Site</p> <p>Ecology Focus Puget Sound Publication Number 09-09-065</p> <p>Ecology Focus Puget Sound Publication Number 09-09-065</p> |

Notes:

RECs are depicted on Figure 3.

Appendix A

Qualifications of Environmental Professionals

Andrew G. Mott

Project Scientist

Professional History

Education

BS, Hydrogeology, University of Wisconsin - Oshkosh

Registrations

Professional Geologist, WI

Years of Experience

With AECOM 13
With other firms 0

Technical Specialties

Air Monitoring at Remediation Site Perimeters
Brownfield Development
Contaminated Sediment Dredged Material
Contaminated Sediment Investigation
Facility Closure Decommissioning & Demolition
Groundwater & Soil Subsurface Investigation
Groundwater Recovery & Treatment Systems
In Situ and Ex Situ Soil Remediation & Treatment
Landfill and Waste Capping & Containment
Operation & Maintenance of Remediation Systems
Program Management
Project Feasibility, Siting &

Mr. Mott serves as a Project Hydrogeologist in the firm's environmental practice. He specializes in environmental site assessment, soil and groundwater investigation, remediation, site development, and non-metallic mining. He also specializes in Brownfield grant writing, Brownfield redevelopment, railroad compliance and environmental issues.

Experience

City of Oshkosh, Wisconsin, EPA Brownfield Grants, Wisconsin. Assisted with writing for several EPA Brownfield Grants. The city was awarded four \$200,000 Cleanup Grants, three \$200,000 Hazardous Substance Site Assessment Grants, and a \$200,000 Petroleum Site Assessment Grant. Assisted with executing the grants.

City of Oshkosh, Wisconsin, WDNR SAGs, Wisconsin. Project Manager for several WDNR SAGs for the City of Oshkosh Wisconsin. Grant funds were utilized for Phase I ESA, Phase II ESA, demolition of an existing building, and removal of underground storage tanks.

City of Oshkosh, Wisconsin, GIS System Design, Wisconsin. Designed a Geographic Information System (GIS) database for a 230-parcel Brownfield pilot project for the City of Oshkosh \$200,000 EPA Brownfield Pilot Grant.

City of Oshkosh, Wisconsin, WDNR Greenspace Grant, Wisconsin. Assisted with grant writing to obtain a \$200,000 WDNR Greenspace Grant for the City of Oshkosh Riverside Park in Oshkosh, Wisconsin. The grant was used to improve a park located along the Fox River.

City of Oshkosh, Wisconsin, Phase I and II ESA, Wisconsin. Project Manager for five WDNR SAGs for the City of Oshkosh, Wisconsin. Grant funds were utilized for Phase I ESA, Phase II ESA, demolition of an existing building, and removal of underground storage tanks.

Cities of Neenah, New London, and Manitowoc, WDNR Site Assessment, Wisconsin. Project Manager and grant writer for WDNR Site Assessment Grant for the City of Neenah, City of New London, and City of Manitowoc. Funds from the SAG were utilized in Phase I ESA, Phase II ESA, demolition, tank removal, site security, asbestos removal and abatement.

City of Neenah, Wisconsin, Brownfield Assessment Grant, Wisconsin. Assisted in grant writing and served as Project Manager for WDCOM Grant for City of Neenah ALTA Building WDCOM Brownfield Assessment Grant, Neenah, Wisconsin. Funds from the grant were utilized Phase I ESA, Phase II ESA, demolition of an existing building, and construction of a water in-take system.

Confidential, Brownfield Redevelopment, Wisconsin. Project Manager for several Brownfield Redevelopment sites that were in the WDNR Voluntary Party Liability Exemption program in Wisconsin. The sites received their Certification of Completion.

Kimberly Clark X-Mill, Water Intake System, Neenah, Wisconsin. Construction Manager for Kimberly-Clark X-Mill Water Intake System, Neenah, Wisconsin. Performed construction documentation of water intake reroute for area paper mill.

Wisconsin Central Railroad, Utility Line Upgrades, North Fond du Lac, Wisconsin. Construction Manager for Wisconsin Central Railroad Utility Line Upgrades. Performed construction documentation of the installation of storm water and sanitary lines at local railroad yard.

Canadian National Railroad, Wastewater Study, North Fond du Lac, Wisconsin. Project Manager for Canadian National Railroad – North Fond du Lac Yard storm water Wastewater Study. Responsible for a study of a railroad yard's storm water system to determine if the system is in compliance with State of Wisconsin and Federal regulations. Provided recommendations with upgrading storm water system. Also, reviewed locomotive fueling system for compliance with existing SPCC plan.

Canadian National Railroad, Storm Water and Waste Water Discharge Review, Proctor, Minnesota. Field Manager responsible for a review of the facility's storm water and sanitary operations, compliance sampling and required reporting obligations relating to storm water discharge and wastewater discharge.

Canadian National Railroad, Storm Water Pollution Prevention Plans (SWPPP), Neenah, Wisconsin and Homewood, Illinois. Obtained and reviewed state specific regulations, conducted site walk-over of the facilities and created site specific diagrams with drainage areas and flow direction; prepared the SWPPP Plans for implementations for railroad facilities; and developed quarterly, semi-annual and annual sampling checklists for yards.

Confidential, Investigation and Remediation of Railroad Yards, Appleton, Green Bay, Neenah, North Fond du Lac, Wisconsin. As project manager, found contaminants at various yards including petroleum, chlorinated solvents,

polynuclear aromatic hydrocarbons, lead, and arsenic.

Confidential, Immediate-action Spill Sites, Northeastern and East Central Wisconsin. As project manager, work included free product removal documentation, directing soil remediation, implementing follow-up groundwater quality monitoring, and submittal of sites for regulatory closure.

Confidential, Phase I Site Assessment, Wisconsin. Project Manager for numerous Phase I Environmental Site Assessment (ESAs) and Phase II Subsurface Assessments for property transfers throughout Wisconsin.

Confidential, Underground Petroleum Facilities, Wisconsin. As Project Hydrogeologist, provided soil and groundwater contamination assessments for underground petroleum fuel storage facilities, including projects under the Wisconsin Petroleum Environmental Cleanup Fund Act (PECFA).

Petroleum Release Cleanup, Mt. Calvary, Wisconsin. Project Manager for one of the largest petroleum releases in the State of Wisconsin at Abhold's Garage in Mt. Calvary, Wisconsin. Cleanup of the site included groundwater extraction and soil vapor recovery systems.

Confidential, Reclamation Plans and Client Reviews, Wisconsin. Project Hydrogeologist for non-metallic mine sites throughout Wisconsin. Prepared Reclamation Plans for over a dozen different sites. Also provided for a client review of non-metallic Reclamation Plans prepared by different consultants.

Honors and awards

- 2005 STS Project of the Year – Riverside Park Amphitheater
- 2003 ICMA Brownfields Conference Honorable Mention – “Packaging a Brownfield Site for a Developer”
- 2000 STS Project of the Year – Miles Kimball Redevelopment

Publications and presentations

- “The Challenges of Combining Multiple Funding Tools to Support Brownfield Redevelopment”, National Brownfield Conference, Charlotte, North Carolina, November 2002.
- “Using Geographic Information Systems to Support Brownfield Redevelopment Decision Making Process”, National Brownfield Conference, Charlotte, North Carolina, November 2002.
- “Packaging a Brownfield Site for a Developer”, National Brownfield Conference, St. Louis, Missouri, November 2003.

Technical Specialties

Air Quality Compliance Design,
Implementation & Management

Training and Certifications

40 HR OSHA Hazwoper Training
8 hour hazwoper refresher

Mr. Albert Cole is a client manager for a major beverage manufacturer, coordinating URS projects worldwide. His projects include confidential due diligence, risk assessment, and WWTP design projects. He has managed Superfund remediation and removal projects in North Carolina, Virginia, Wisconsin, and Mississippi. His expertise includes management of RI/FS, RD, and RA activities including preparation of work plans, designs and specifications, implementation of studies and oversight and/or implementation of remedies. His work on superfund projects includes serving as Project Manager, Senior Reviewer, Field Manager and Senior Technical Reviewer. His technical expertise includes experience in such diverse remediation technologies as phytoremediation, capping and containment technologies, in-situ techniques such as Biox®, HRC™, and ORC™. Also, he has experience in the use of air sparging, soil vapor extraction and pump and treat ground water treatment remedies. He has successfully negotiated a natural attenuation remedy for a superfund site in North Carolina. He was the project director for preparation of an RI/FS for Xcel Energy's Ashland Superfund Site in Ashland, WI. The site is a MGP site with contaminated soils, ground water and sediments. He is also the project director for a removal action at the Red Panther Site in Clarksdale, MS. The project included demolition of railroad spur, ASTs, loading docks and the removal and treatment of arsenic and pesticide contaminated soils. Mr. Cole has managed and completed over \$78 Million in remediation projects over the past 14 years. Mr. Cole also has managed air permitting, compliance audits, design of EMS and EMIS systems for various manufacturing and pulp and paper clients in Wisconsin, Michigan, and Illinois. He has acted as project manager or project director for various projects for the US Navy and the Air Force including upgrades of UST and AST's for the Navy in the Mid-west and design of an air sparging/SVE system for Robbins AFB, Georgia.

Experience

Air Quality

Appleton Coated, Stora Enso, and Louisiana Pacific, Project Director, Air Permitting Projects, Wisconsin. Directed air permitting activities for mill expansions. Included Bact/Laer determinations, air modeling and air permit

applications including construction, PSD and Operating permits.

GM, US Navy, Air Emission Inventories, Illinois and Wisconsin. Project Director for air emission point inventories air permit forms for various military and industrial clients. Services included survey of facility, identification and quantification of emissions and preparation of air permits. Clients included automobile assembly plants, plastic extrusion facilities, chemical storage facilities, and military bases.

EHS Management and Consulting

Confidential Client, Multinational Due Diligence Project, South America, North Africa, and Europe. Responsible as project director for a series of due diligence compliance audits in South America, North Africa, and Europe. Projects involved plants in Mexico, Costa Rica, Venezuela, Ireland, and Algeria. Projects included environmental compliance and corporate policy auditing for a major beverage manufacturing company.

Confidential Client, Due Diligence Audit, Compliance Audit, and Remediation Estimate Preparation, Michigan and Indiana. Project Director and Lead Auditor for a property transaction involving a Japanese Company's purchase of a coatings manufacturing company in the USA. Project involved assessing current compliance status of all US facilities, estimating costs to maintain compliance and estimating remediation costs for both on-site and off-site impacted soil and ground water.

Appleton Coated Papers, Compliance Audit, Appleton, Wisconsin. Program Manager for the compliance audit of a pulp and paper mill.

Day Leather Corporation, Compliance Audit, Wisconsin. Conducted environmental compliance audit of a Tannery for an acquisition, Spill Contingency Plans.

US Navy, SPCC Plans, Illinois, Wisconsin, New Jersey, and New Hampshire. Project Director for the development of spill prevention, control, and counter-measures (SPCC) plans and contingency plans for several military facilities including Glevue Naval Air Station, Illinois. Updated SPCC and Contingency plans, designed overfill protection systems and corrosion protection systems for GLN and several radar facilities in the Midwest. Also performed analysis of combined sewer systems at Portsmouth, NH submarine base and Earle Naval Weapons Station in NJ.

Appleton Coated Paper, EMS/ISO 14000, Appleton, Wisconsin. Program manager for the EMS audit performed to prepare the facility to become ISO 14000 certified.

Confidential Client. Lead Auditor in the performance of Compliance Audits and Due Diligence Audits for a financial transaction involving a Japanese Company's potential purchase of interest in several power generating and steel industry assets in the USA.

Remediation Construction and Site Restoration

Red Panther Site PRP Committee, Superfund Removal Action, Clarksdale, Mississippi. Responsible as project director for a superfund removal action in

Mississippi: Project involves investigation and removal of pesticide contaminated soils, tanks, and buildings under an EPA § 106 order. Coordinated investigation, removal design and bid process. Field managed removal of off-site ditch soils. Coordinated activities with state and local governments and adjacent manufacturing facilities to minimize disruption of traffic and manufacturing activities.

Lucent, Remediation, Indianapolis, Indiana. Prepared strategy for remediation of a solvent plume using ERH and ERD technologies. Duties included reviewing pricing, evaluating technologies and negotiating costs with vendors and providing general support to the PM and proposal team.

Michael Best and Friedrich, Remediation of Hydraulic Lift, Appleton, Wisconsin. Served as senior project manager for investigation and removal of an abandoned hydraulic lift at a former gas station. Designed investigation and removal action. Site is being closed with a deed restriction requiring management of the building and parking lot as an impermeable cap.

Garvey Elevator, Remediation of a CCL4 Plume, Hastings Nebraska. Provided senior technical review and guidance for the preparation of work plans for the assessment of an operating P&T and SVE at the contaminant source area and the preparation of an RI/FS work plan for the down gradient 5-mile long plume. Investigation includes use of CPT, MIP, DPT, and ground water monitoring wells. Data gathered includes MIP data, Soil gas data, and hydrogeologic data. Plume is 120 to 220 feet below grade.

Remedial Investigation and Construction Management

Rent-to-Kil Inc., Virginia Properties Superfund Site, Richmond, Virginia. Responsible as project director for the remedial design and remedial action at a large former creosote manufacturing facility. Project includes remediation of site soils and wetlands. Successfully negotiated a change in the ROD that eliminated thermal treatment of soils and replacement with a containment remedy. Successfully conducted demolition activities, installed slurry wall, built a groundwater extraction and storage facility, and constructed a modified RCRA cap. Project involved wetland mitigation and remediation with US Fish and Wildlife and the USACE. Project completed on time and under budget.

Aberdeen Pesticide Superfund Site PRP Group/Dow Chemical, Superfund Remediation Project, Aberdeen, North Carolina. Responsible as project director for the soil and groundwater remedial designs and remedial action for a superfund site contaminated with various pesticides and pesticide degradation products. Project involved coordination of five major individual sites with different PRPs at each site. Responsibilities include technical oversight, negotiation strategy development, and preparation of remedial design documents. Project Director for the preparation of the RAWP and the demolition of the remaining structures on site. Project Director and Field Manager for the oversight/implementation of the selected remedies which included thermal desorption of pesticide contaminated soils, phytoremediation of groundwater, natural attenuation and off site disposal of heavy metals contaminated materials.

Remediation Consulting and Engineering

Xcel Energy, Ashland/NSP Superfund Site, Ashland, Wisconsin. Project Director for the Remedial Investigation work plan development for the Ashland

Superfund Site. Investigation includes soil, ground water, and sediment investigations, ecological and human health risk assessments. Site is complex and includes an upland area, fill area, and sediments. Ground water is under artesian conditions. Also managed operation of an interim ground water extraction and treatment system installed on site. Negotiated scope of studies with EPA, the state, and the natural resource trustees.

AK Steel, RI/FS, Hamiton, Ohio. Senior Technical Reviewer - Prepared RI/FS Work plans and provided senior technical review and guidance for the RI, ERA and HHRA reports for the soil, groundwater and sediment investigations at the AK Steel site in Hamilton, Ohio. Site investigation includes soil and groundwater from a closed integrated steel mill including, coke batteries, gas plants, sintering plants, and blast furnaces. Used the VSP guidance from DOE to minimize the number and locations of soil samples on the 250 Acre site. Results of investigation reduced areas of concern from 250 acres to about 25 acres of the site based upon industrial risk levels.

 TWO TECHNOLOGY PARK DRIVE
 WESTFORD, MA 01886

SHOULD ANY OF THE ABOVE DESCRIBED POLICIES BE CANCELLED BEFORE THE EXPIRATION DATE THEREOF, THE ISSUING INSURER WILL ENDEAVOR TO MAIL **30** DAYS WRITTEN NOTICE TO THE CERTIFICATE HOLDER NAMED TO THE LEFT, BUT FAILURE TO DO SO SHALL IMPOSE NO OBLIGATION OR LIABILITY OF ANY KIND UPON THE INSURER, ITS AGENTS OR REPRESENTATIVES.

AUTHORIZED REPRESENTATIVE
 of Marsh Risk & Insurance Services
 David Denihan

IMPORTANT

If the certificate holder is an ADDITIONAL INSURED, the policy(ies) must be endorsed. A statement on this certificate does not confer rights to the certificate holder in lieu of such endorsement(s).

If SUBROGATION IS WAIVED, subject to the terms and conditions of the policy, certain policies may require an endorsement. A statement on this certificate does not confer rights to the certificate holder in lieu of such endorsement(s).

DISCLAIMER

This Certificate of Insurance does not constitute a contract between the issuing insurer(s), authorized representative or producer, and the certificate holder, nor does it affirmatively or negatively amend, extend or alter the coverage afforded by the policies listed thereon.

Appendix C

User Questionnaire

AECOM

ASTM 1527-05

USER QUESTIONNAIRE

To qualify for one of the *Landowner Liability Protections (LLPs)*¹ offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"),² the *user* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete.

1. Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law? **No**

2. Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? **No**

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the *user* of the *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? **Yes**

4. Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*? **I do not have information on the purchase price.**

5. Commonly known or reasonably ascertainable information about the *property* (40 DFR 312.30).

Are you aware of commonly known or *reasonable ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *user*,

- a) Do you know the past uses of the *property*? **Yes**

¹ *Landowner Liability Protections*, or *LLP's*, is the term used to describe the three types of potential defenses to Superfund liability in EPA's *Interim Guidance Regarding Criteria Landowners Must Meet in Order to Qualify for Bona Fide Prospective Purchaser, Contiguous Property Owner, or Innocent Landowner Limitations on CERCLA Liability* ("*Common Elements*" Guide) issued on March 6, 2003.

² P.L. 107-118.

- b) Do you know of specific chemicals that are present or once were present at the *property*? **Yes**
- c) Do you know of spills or other chemical releases that have taken place at the *property*? **Yes**
- d) Do you know of any environmental cleanups that have taken place at the *property*? **No**

6. The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). As the *user* of this *ESA*, based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*? **No**

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL..... National Priority List
Proposed NPL..... Proposed National Priority List Sites
NPL LIENS..... Federal Superfund Liens

Federal Delisted NPL site list

Delisted NPL..... National Priority List Deletions

Federal CERCLIS list

FEDERAL FACILITY..... Federal Facility Site Information listing

Federal RCRA CORRACTS facilities list

CORRACTS..... Corrective Action Report

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF..... RCRA - Treatment, Storage and Disposal

Federal RCRA generators list

RCRA-SQG..... RCRA - Small Quantity Generators
RCRA-CESQG..... RCRA - Conditionally Exempt Small Quantity Generator

Federal institutional controls / engineering controls registries

US ENG CONTROLS..... Engineering Controls Sites List
US INST CONTROL..... Sites with Institutional Controls

State and tribal leaking storage tank lists

INDIAN LUST..... Leaking Underground Storage Tanks on Indian Land

State and tribal registered storage tank lists

AST..... Aboveground Storage Tank Locations
INDIAN UST..... Underground Storage Tanks on Indian Land
FEMA UST..... Underground Storage Tank Listing

State and tribal voluntary cleanup sites

INDIAN VCP..... Voluntary Cleanup Priority Listing

EXECUTIVE SUMMARY

State and tribal Brownfields sites

BROWNFIELDS..... Brownfields Sites Listing

Local Brownfield lists

US BROWNFIELDS..... A Listing of Brownfields Sites

Local Lists of Landfill / Solid Waste Disposal Sites

DEBRIS REGION 9..... Torres Martinez Reservation Illegal Dump Site Locations
ODI..... Open Dump Inventory
SWTIRE..... Solid Waste Tire Facilities
INDIAN ODI..... Report on the Status of Open Dumps on Indian Lands

Local Lists of Hazardous waste / Contaminated Sites

US CDL..... Clandestine Drug Labs
CDL..... Clandestine Drug Lab Contaminated Site List
HIST CDL..... List of Sites Contaminated by Clandestine Drug Labs
US HIST CDL..... National Clandestine Laboratory Register

Local Land Records

LIENS 2..... CERCLA Lien Information
LUCIS..... Land Use Control Information System

Other Ascertainable Records

DOT OPS..... Incident and Accident Data
DOD..... Department of Defense Sites
FUDS..... Formerly Used Defense Sites
CONSENT..... Superfund (CERCLA) Consent Decrees
ROD..... Records Of Decision
UMTRA..... Uranium Mill Tailings Sites
MINES..... Mines Master Index File
SSTS..... Section 7 Tracking Systems
MLTS..... Material Licensing Tracking System
RADINFO..... Radiation Information Database
RAATS..... RCRA Administrative Action Tracking System
UIC..... Underground Injection Wells Listing
DRYCLEANERS..... Drycleaner List
Inactive Drycleaners..... Inactive Drycleaners
INDIAN RESERV..... Indian Reservations
SCRD DRYCLEANERS..... State Coalition for Remediation of Drycleaners Listing
COAL ASH..... Coal Ash Disposal Site Listing
COAL ASH DOE..... Steam-Electric Plan Operation Data
COAL ASH EPA..... Coal Combustion Residues Surface Impoundments List

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants..... EDR Proprietary Manufactured Gas Plants

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 09/30/2010 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

State- and tribal - equivalent NPL

HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the HSL list, as provided by EDR, and dated 09/15/2010 has revealed that there are 7 HSL sites within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the CSCSL list, as provided by EDR, and dated 01/25/2011 has revealed that there are 14 CSCSL sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Ecology's Solid Waste Facilities Handbook.

A review of the SWF/LF list, as provided by EDR, and dated 12/14/2010 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the CSCSL NFA list, as provided by EDR, and dated 01/25/2011 has revealed that there are 5 CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 02/17/2010 has revealed that there are 2 RCRA-NonGen sites within approximately 0.25 miles of the target property.

MANIFEST: Hazardous waste manifest information.

A review of the MANIFEST list, as provided by EDR, and dated 12/31/2009 has revealed that there is 1 MANIFEST site within approximately 0.25 miles of the target property.

Biennial Reports:

Last Biennial Reporting Year: 2009

Annual Waste Handled:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 4210

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

PCS (Permit Compliance System) is a computerized management

MAP FINDINGS

KIMBERLY CLARK WORLD WIDE (Continued)

1000421503

information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

US EPA RACT/BACT/LAER Clearinghouse (RBLC) database contains case-specific information on the "Best Available" air pollution technologies that have been required to reduce the emission of air pollutants from stationary sources (e.g., power plants, steel mills, chemical plants, etc.). RACT, or Reasonably Available Control Technology, is required on existing sources in areas that are not meeting national ambient air quality standards. BACT, or Best Available Control Technology, is required on major new or modified sources in clean areas. LAER, or Lowest Achievable Emission Rate, is required on major new or modified sources in non-attainment areas.

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

SPILLS:

Facility ID: 547098
Medium: Not reported
Material Desc: PETROLEUM - HYDRAULIC OIL
Material Qty: 1
Material Units: UNKNOWN
Date Received: 3/26/2005
Contact Name: Not reported

Facility ID: 556807
Medium: Not reported
Material Desc: UNKNOWN
Material Qty: 1
Material Units: SHEEN
Date Received: 8/3/2006
Contact Name: UNK

NPDES:

Facility Status: Active
Facility Type: Industrial NPDES IP
Admin Region: Industrial
Latitude: 47.982996999999997
Longitude: -122.222555
Permit ID: WA0000621
Permit Version: 3
Permit Status: Active
Permit SubStatus: Issued
Ecology Contact: Robert Carruthers
WRIA: Snohomish
Permit Expiration Date: 2/1/2013
Effective Date: 2/1/2009

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2009

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 54018

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 7435

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 197

Waste code: D004
Waste name: ARSENIC
Amount (Lbs): 2

Waste code: D005
Waste name: BARIUM
Amount (Lbs): 47470

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites,

including an inventory of sites, planned and actual site activities, and financial information.

US Facility Response Plan (FRP) contains plans for responding, to the maximum extent practical, to worst case discharges of oil.

EPA Region: 10
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name: ED RUBATINO
Owner/operator address: PO BOX 1029
EVERETT, WA 98206
Owner/operator country: US
Owner/operator telephone: Not reported
Legal status: Private
Owner/Operator Type: Operator
Owner/Op start date: 12/31/1957
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

EPA Region: 10
Land type: District
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name: DUNLAP TOWING CO
Owner/operator address: PO BOX 593
LA CONNER, WA 98257
Owner/operator country: US
Owner/operator telephone: Not reported
Legal status: Private
Owner/Operator Type: Operator
Owner/Op start date: 01/01/1997
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Land type: Private
Classification: Conditionally Exempt Small Quantity Generator
Description: Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Owner/Operator Summary:

Owner/operator name: PROVIDENCE GENERAL MEDICAL CENTER
Owner/operator address: PO BOX 1147
EVERETT, WA 98206
Owner/operator country: US
Owner/operator telephone: Not reported
Legal status: Private
Owner/Operator Type: Operator
Owner/Op start date: 12/31/2007
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

| Number of Days to Update: 14 | Next Scheduled EDR Contact: 03/28/2011 |
| | Data Release Frequency: Varies |

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

State- and tribal - equivalent CERCLIS

CSCSL: Confirmed and Suspected Contaminated Sites List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

State and tribal Brownfields sites

BROWNFIELDS: Brownfields Sites Listing

A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

CSCSL NFA: Confirmed and Contaminated Sites - No Further Action

The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead, a No Further Action code is entered based upon the type of NFA determination the site received.

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

TACOMA/PIERCE COUNTY:

Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

USGS TOPOGRAPHIC MAP

| | |
|-----------------------|----------------------|
| Target Property Map: | 47122-H2 EVERETT, WA |
| Most Recent Revision: | 1973 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

| | |

| <u>NWI Quad at Target Property</u> EVERETT | NWI Electronic <u>Data Coverage</u> YES - refer to the Overview Map and Detail Map |
|---|--|

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

| | |
|-----------------------------|---|
| Search Radius: | 1.25 miles |
| Location Relative to TP: | 0 - 1/8 Mile SSW |
| Site Name: | SCOTT PAPER CO |
| Site EPA ID Number: | WAD009250820 |
| Groundwater Flow Direction: | NOT AVAILABLE |
| Inferred Depth to Water: | less than 20 feet |
| Hydraulic Connection: | The near-surface aquifer is brackish and the depth to a potable aquifer is not available. |
| Sole Source Aquifer: | No information about a sole source aquifer is available |
| Data Quality: | Information is inferred in the CERCLIS investigation report(s) |

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |

|---------------|-----------------------------|---|
| B11 | 1/2 - 1 Mile ESE | SE |

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Alderwood

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 69 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|--------------------------|---|---|---|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 7 inches | gravelly sandy loam | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel | Max: 0.42 Min: 0.01 | Max: 6.5 Min: 5.1 |
| 2 | 7 inches | 35 inches | very gravelly sandy loam | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel | Max: 0.42 Min: 0.01 | Max: 6.5 Min: 5.1 |
| 3 | 35 inches | 59 inches | gravelly sandy loam | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel | Max: 0.42 Min: 0.01 | Max: 6.5 Min: 5.1 |

Soil Map ID: 3

Soil Component Name: Alderwood

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Wells

Source: Department of Health

Telephone: 360-236-3148

Group A and B well locations.

Water Well Listing

Source: Public Utility District

Telephone: 206-779-7656

A listing of water well locations in Kitsap County.

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Listing

Source: Department of Natural Resources

Telephone: 360-902-1445

Locations that represent oil and gas test well sites in Washington State from 1890 to present.

RADON

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

If you wish to pay your property taxes on-line now, select one of the following options and press the button "Add To Payment List". If this property is noted as "Delinquency" in the General Information Status field, additional costs may be added monthly. At certain dates within the delinquency process, all outstanding taxes, assessments, interest, penalties, and costs are due in certified funds. Make Check or Money Order to "Snohomish County Treasurer". Send to Snohomish County Treasurer, 3000 Rockefeller Ave, M/S 501, Everett, WA 98201

If you wish to pay your property taxes on-line now, select one of the following options and press the button "Add To Payment List". If this property is noted as "Delinquency" in the General Information Status field, additional costs may be added monthly. At certain dates within the delinquency process, all outstanding taxes, assessments, interest, penalties, and costs are due in certified funds. Make Check or Money Order to "Snohomish County Treasurer". Send to Snohomish County Treasurer, 3000 Rockefeller Ave, M/S 501, Everett, WA 98201

If you wish to pay your property taxes on-line now, select one of the following options and press the button "Add To Payment List". If this property is noted as "Delinquency" in the General Information Status field, additional costs may be added monthly. At certain dates within the delinquency process, all outstanding taxes, assessments, interest, penalties, and costs are due in certified funds. Make Check or Money Order to "Snohomish County Treasurer". Send to Snohomish County Treasurer, 3000 Rockefeller Ave, M/S 501, Everett, WA 98201

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC.
