Re: Quarterly Groundwater Monitoring and Remediation System Status Report – December 2018  
Whitney's Chevrolet, Inc.  
Agreed Order No. DE 11121  
123 West Pioneer Avenue  
Montesano, Washington

EPI Project Number: 51201.19

Dear Mr. Davis:

Environmental Partners, Inc. (EPI) is pleased to present this Quarterly Groundwater Monitoring Report for December 2018 for the Whitney's Chevrolet, Inc. Site in Montesano, Washington (the Site). The location of the Whitney's Chevrolet facility at 123 West Pioneer Avenue is indicated on Figure 1. The Site details are shown on Figure 2.

The following four properties are either fully or partially encompassed by the Site:

- Whitney's Chevrolet;
- Umpqua Bank;
- Charlie's Bar/Veterans of Foreign Wars (VFW) Post #2455; and
- Tony's Short Stop.

In addition, the Site includes portions of the City of Montesano rights-of-way for West Pioneer Avenue, South First Street, and South Main Street.

The quarterly groundwater monitoring and sampling were conducted in accordance with the *Groundwater Compliance Monitoring Plan*, dated May 3, 2013 (GCMP). The GCMP was approved by the Washington State Department of Ecology (Ecology) and has been incorporated into Agreed Order DE 11121, dated March 30, 2015 (the Order). In accordance with the GCMP, a total of 11 monitoring wells were scheduled for sampling during this event.

## **GROUNDWATER MONITORING AND SAMPLING PROCEDURES**

The air sparging/soil vapor extraction (AS/SVE) remediation system at the Site was shut down on December 4, 2018 prior to the sampling event to allow for stabilization of the groundwater surface to natural conditions. On December 5 and December 7, 2018, EPI personnel measured groundwater levels in 28 monitoring wells. Eleven groundwater samples plus one duplicate quality control sample were collected and submitted to Libby Environmental Inc. for chemical analysis, as described below.

### **Groundwater Measurements**

Prior to groundwater sampling, a hydrocarbon interface probe was used to assess the potential presence of light non-aqueous phase liquid (LNAPL) in each of the monitoring wells and, if present, to measure the thickness of accumulated LNAPL. Groundwater samples were not collected from monitoring wells that contained measurable LNAPL or an observable sheen. The depth to water was measured to the nearest 0.01 foot in each monitoring well relative to the northernmost point on the well casing. This measurement was subtracted from the surveyed elevation to establish a piezometric elevation for the water table. Water levels were measured in 25 wells on December 5, 2018 and in 3 wells (KBMW-9, KBMW-10, and TSSMW-9) on December 7, 2018. Neither measurable LNAPL nor a hydrocarbon sheen were identified in Site monitoring wells during this event.

The piezometric elevation data indicate that groundwater migrates toward the southeast with an average hydraulic gradient of approximately 0.011 foot/foot, as measured between monitoring wells WCMW-9 and KBMW-12. These piezometric conditions are consistent with previous findings at the Site. A summary of groundwater elevation data for the Site is included in Table 1. A site representation with groundwater elevations and piezometric contours measured is included as Figure 3.

### **Groundwater Sampling and Analyses**

Immediately prior to sample collection, each well was either purged until field measurements of pH, temperature, and conductivity stabilized to within 10 percent of the prior measurement or until three wetted casing volumes had been removed, whichever occurred first. Purging was performed using a peristaltic pump and dedicated tubing. Purge water was stored on-Site in properly labeled 55-gallon drums pending permitted disposal.

Wells were sampled using the same tubing and peristaltic pump used for purging. Sampling was conducted using low-flow sampling techniques to minimize sample volatilization and silt uptake. The groundwater samples were collected at a flow rate of less than 100 milliliters/minute and pumped directly into appropriate pre-labeled sample containers supplied by the laboratory.

All groundwater samples were submitted for the following analyses:

- Gasoline-range petroleum hydrocarbons (GRPH) using the Northwest Total Petroleum Hydrocarbons as Gasoline (NWTPH-Gx) Method; and

- Volatile organic compounds (VOCs) including the aromatic fuel hydrocarbons benzene, toluene, ethylbenzene, and total xylenes (BTEX), naphthalene, and tetrachloroethene (PCE) using U.S. Environmental Protection Agency (EPA) Method 8260C.

Immediately upon collection, each sample container was appropriately labeled and placed in an iced cooler pending submittal to the analytical laboratory. All samples were transported under standard Chain-of-Custody protocols to Libby Environmental, Inc., in Olympia, Washington.

## GROUNDWATER SAMPLE ANALYTICAL RESULTS

Laboratory-reported chemical analytical data are presented in Table 2 and summarized on Figure 4. Final laboratory analytical reports are included as Attachment A.

For the purposes of this report, it is assumed that GRPH, benzene, and PCE in groundwater are the primary chemicals of concern (COCs) for monitoring, and these chemicals serve as indicator hazardous substances for the dissolved-phase plume. Isoconcentration contours for GRPH, benzene, and PCE are depicted on Figures 5, 6, and 7 respectively.

GRPH was identified in samples collected from 5 of the 11 monitoring wells sampled during this event. Reported concentrations of GRPH ranged from 500 micrograms per liter ( $\mu\text{g/L}$ ) in the groundwater sample collected from monitoring well KBMW-7 to 16,000  $\mu\text{g/L}$  in the sample collected from monitoring well WCMW-2. GRPH isoconcentration contours for the December 2018 sampling event are presented on Figure 5.

Benzene was identified in samples collected from 3 of the 11 monitoring wells sampled during this event. Reported concentrations of benzene ranged from 1.2  $\mu\text{g/L}$  in the sample collected from monitoring well KBMW-7 to 12  $\mu\text{g/L}$  in the sample collected from monitoring well WCMW-3. Benzene was not identified in the groundwater sample collected from monitoring well TSSMW-9. This finding continues to support a conclusion that benzene impacts originating from releases on the Whitney's Chevrolet, Inc. Site decrease to less than the MTCA Method A Groundwater Cleanup Level of 5  $\mu\text{g/L}$  upgradient of the Tony's Short Stop property. Benzene isoconcentration contours for the December 2018 sampling event are presented on Figure 6.

The GRPH and benzene data presented herein directly contradict prior representations to Ecology by the potentially liable persons (PLPs) for the Tony's Short Stop site that GRPH and benzene impacts previously observed at KBMW-12, immediately adjacent to, downgradient of, the former remedial excavation on the Tony's Short Stop property, are the result of impacts from the Whitney's Chevrolet, Inc. Site.

PCE was identified in samples collected from 3 of the 11 monitoring wells sampled during this event. Reported concentrations of PCE ranged from 12  $\mu\text{g/L}$  in the groundwater sample collected from monitoring well WCMW-4 to 66  $\mu\text{g/L}$  in the sample collected from monitoring well WCMW-3. PCE isoconcentration contours for the December 2018 sampling event are presented on Figure 7.

The next groundwater monitoring event is scheduled for February 2019. A total of 15 wells associated with the Whitney's Chevrolet, Inc. Site and 2 wells associated with the Tony's Short Stop property are scheduled for monitoring and sampling during the February 2019 monitoring event.

## REMEDIATION SYSTEM OPERATION

The AS/SVE system was installed and tested between October 2016 and March 2017 and started up on March 27, 2017 for continuous operation. Details of the AS/SVE system installation and startup were provided in the *Remedial Action System As-Built and Startup Report (As-Built Report)*, which was published on October 6, 2017. The As-Built Report was provided to Ecology for review and was approved by Mr. Marv Coleman.

The AS/SVE system at the Site is designed for remediation of the shallow aquifer. Extracted vapors were previously treated through granular activated carbon (GAC) to remove COCs prior to atmospheric discharge. The atmospheric point source discharge of the AS/SVE system is regulated under an Olympic Region Clean Air Agency (ORCAA) Notice of Construction permit. In February 2018, EPI requested and was granted approval from ORCAA to remove the vapor controls for system vapors based on a demonstration that the discharged concentrations were below the threshold that requires treatment. EPI will continue to monitor vapor concentrations at the point of discharge as part of the monthly operation and maintenance (O&M) tasks to ensure continued compliance with ORCAA's discharge criteria.

For the current reporting period operations and maintenance (O&M) inspections were conducted on a monthly basis. During the O&M site visits, EPI personnel monitored and recorded system status and operational parameters and made necessary adjustments to the system components to optimize performance. Vapors at the inlet and outlet of the AS/SVE system were monitored with a photoionization detector (PID) to measure the concentration of volatile compounds and monitor for carbon breakthrough in accordance with the air permit requirements.

Samples of the system influent and effluent vapors were also collected on each O&M visit and submitted for analysis to confirm compliance with the air permit, estimate a contaminant mass removal rate, and confirm that GAC treatment is not currently required. The vapor samples were collected into Tedlar® bags and submitted to Fremont Analytical in Seattle, Washington, for laboratory analysis. All samples were analyzed for GRPH by NWTPH-Gx Method, and for VOCs using EPA Method 8260. As noted above the system effluent was re-routed to bypass the GAC treatment in February 2018 after permission to do so from ORCAA. Therefore, only one vapor sample has been collected for laboratory analysis during subsequent vapor sampling events.

Based on the monitoring data and vapor analytical results, it is estimated that the AS/SVE system removed an about 726 pounds of GRPH from the time of initial system startup on February 15, 2017 through December 4, 2018. The AS/SVE system removed about 76 pounds of GRPH during the fourth quarter of 2018. The winter months, with higher water levels, are typically exhibit the lowest rates of remediation system recovery.

Tabulated vapor emission data for the SVE system are summarized in Table 3. Tabulated mass removal and destruction efficiency data for the SVE system are summarized in Table 4. A copy of the laboratory analytical report for the system vapor samples is provided in Attachment B.

System monitoring data confirmed that the control efficiency and system discharges were in compliance with the ORCAA Notice of Construction permit limits.

EPI appreciates the opportunity to be of assistance on this project. If you have any questions or comments, please do not hesitate to contact us at (425) 395-0010.

Sincerely,

Thomas C. Morin, L.G.

Notes:

All measurements are in feet. Elevations are in feet above mean sea level (AMSL).

-- Not recorded.

LNAPL Light non-aqueous phase liquid

a PVC casing elevation on the north side of the well casing.

- Survey Coordinate System and Zone: Washington State Plane, South Zone coordinates.
- Horizontal Datum: NAD 83(91) US feet (horizontal accuracy: 0.1').
- Vertical Datum: NAVD'88 (vertical accuracy: 0.01').
- Survey of WCMW-1 through WCMW-6 completed July 3, 2008 by Duane Hartman & Associates (DHA).
- Survey of KBMW-1 through KBMW-10, ESMW-1 and ESMW-7 completed December 14, 2009 by DHA.
- Survey of TSSMW-1 through TSSMW-13 completed January 18, 2010 by DHA. TSSMW-10 was not accessible at the time of the survey. Therefore, vertical data was not obtained.
- Survey of WCMW-1R, WCMW-7 through WCMW-10, KBMW-11, KBMW-12 completed on November 14, 2011 by DHA.
- Wells KBMW-4, KBMW-5, KBMW-8, KBMW-9, KBMW-10, ESMW-7, TSSMW-7, and TSSMW-9 re-surveyed on December 10, 2013 by Parametrix following road construction.
- Survey of RW-1 completed December 18, 2013 by EPI.

b Depth to groundwater measured from top of well casing.

c LNAPL thickness = [Depth to LNAPL] - [Depth to Water]; measured from top of well casing using an electronic oil-water interface probe. Bold value indicates measurable thickness.

d Water table elevations adjusted for the presence of LNAPL using the following formula and assumed LNAPL specific gravity of 0.8: [Water Table Elevation] = [PVC Casing Elevation] - [Depth to Water] + [LNAPL Thickness x 0.80].

<b>Potentially Applicable Groundwater Cleanup Level<sup>c</sup></b>		<b>800 / 1,000<sup>d</sup></b>	<b>5</b>	<b>1,000</b>	<b>700</b>	<b>1,000</b>	<b>160</b>	<b>5</b>

Notes:

All results presented in micrograms/liter (µg/L).

**Bold** Bold results indicate that the compound was detected above the compound-specific laboratory reporting limit.

Shaded cells indicate that the detected concentration exceeds the potentially applicable groundwater cleanup level.

< Compound was not detected at the laboratory sample quantitation limit shown.

GRPH Gasoline-range petroleum hydrocarbons

PCE Tetrachloroethene

LNAPL Light non-aqueous phase liquid

a Analyzed by Ecology Method NWTPH-Gx.

b Analyzed by EPA Method 8260B or 8260C.

c Based on Model Toxics Control Act (MTCA) Method A Groundwater Cleanup Levels, WAC 173-340-900, Table 720-1.

d MTCA Method A Groundwater Cleanup Level for GRPH is 800 µg/L when benzene is present in the sample and 1,000 µg/L when benzene is not detected.

Notes:

- All results presented in micrograms per liter (µg/L).
- < Compound was not detected at the laboratory sample quantitation limit shown.
- a Analyzed by Ecology Method NWTTPH-Gx.
- b Analyzed by EPA Method 8260C.

Compounds:

- GRPH Gasoline-range petroleum hydrocarbons
- PCE Tetrachloroethene

Qualifier:

- H Holding times for preparation or analysis exceeded.

Notes:

- a Days of SVE operation since last visit.
- b Collected from SVE-TOT location, post dilution.
- c Collected from AIR-INF location, post dilution.
- d Collected from AIR-EFF location, effluent carbon.
- e Calculated as: Removal rate (lbs/day) = [(flow rate(scfm)\*1440 (min/day))\*[28.3(L/Ft3)\*Inf. Conc (µg/L)]]/454,000,000 µg/lb
- f Calculated as: [GRPH Removal Rate (lbs/day) \* Time Since Last Event (days)]
- g Calculated as: [Cumulative GRPH Removed (lbs) + GRPH Removed During Period (lbs)]
- h Calculated as: [(Mass flow rate In - Mass Flow rate Out)/(Mass flow rate in)] \* 100
- i GRPH was not identified in the influent sample at concentrations above the sample quantitation limit during this O&M event. A proxy value of half the sample quantitation limit was used to estimate mass removal.

- < Concentration is less than the laboratory's method detection limit.
- scfm Standard cubic feet per minute.
- GRPH Gasoline-range petroleum hydrocarbons.
- µg/L Micrograms per liter.
- lbs Pounds.
- % Percent.
- ppm Parts per million.
- PID Photoionization detector.
- NM Not measured.

December 17, 2018

Sean Trimble  
Environmental Partners, Inc.  
1180 NW Maple Street, Suite 310  
Issaquah, WA 98027

Dear Mr. Trimble:

Please find enclosed the analytical data report for the Whitney's Chevrolet Project located in Montesano, Washington.

The results of the analyses are summarized in the attached tables. Applicable detection limits and QA/QC data are included. The sample(s) will be disposed of in 30 days unless we are contacted to arrange long term storage.

Libby Environmental, Inc. appreciates the opportunity to have provided analytical services for this project. If you have any further questions about the data report, please give me a call. It was a pleasure working with you on this project, and we are looking forward to the next opportunity to work together.

Sincerely,

Sherry L. Chilcutt  
*Senior Chemist*

## WHITNEY'S CHEVROLET PROJECT

Environmental Partners, Inc.

Libby Project # L181207-2

Date Received 12/7/2018

Time Received 11:25 AM

Received By MH

### Sample Receipt Checklist

#### Chain of Custody

1. Is the Chain of Custody is complete?  Yes  No
2. How was the sample delivered?  Hand Delivered  Picked Up  Shipped

#### Log In

3. Cooler or Shipping Container is present.  Yes  No  N/A
4. Cooler or Shipping Container is in good condition.  Yes  No  N/A
5. Cooler or Shipping Container has Custody Seals present.  Yes  No  N/A
6. Was an attempt made to cool the samples?  Yes  No  N/A
7. Temperature of cooler (0°C to 8°C recommended) 1.8 °C
8. Temperature of sample(s) (0°C to 8°C recommended) 5.5 °C
9. Did all containers arrive in good condition (unbroken)?  Yes  No
10. Is it clear what analyses were requested?  Yes  No
11. Did container labels match Chain of Custody?  Yes  No
12. Are matrices correctly identified on Chain of Custody?  Yes  No
13. Are correct containers used for the analysis indicated?  Yes  No
14. Is there sufficient sample volume for indicated analysis?  Yes  No
15. Were all containers properly preserved per each analysis?  Yes  No
16. Were VOA vials collected correctly (no headspace)?  Yes  No  N/A
17. Were all holding times able to be met?  Yes  No

#### Discrepancies/ Notes

18. Was client notified of all discrepancies?  Yes  No  N/A

**RE: Whitney's**  
**Work Order Number: 1809453**

October 03, 2018

**Attention Sean Trimble:**

Fremont Analytical, Inc. received 1 sample(s) on 9/28/2018 for the analyses presented in the following report.

***Gasoline by NWTPH-Gx***  
***Volatile Organic Compounds by EPA Method 8260C***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Mike C. Ridgeway".

Mike Ridgeway  
Laboratory Director

## Work Order Sample Summary

---

Lab Sample ID	Client Sample ID	Date/Time Collected	Date/Time Received
1809453-001	INF-0928	09/28/2018 10:00 AM	09/28/2018 12:07 PM

---

**CLIENT:** Environmental Partners, Inc.

**Project:** Whitney's

---

WorkOrder Narrative:

**I. SAMPLE RECEIPT:**

Samples receipt information is recorded on the attached Sample Receipt Checklist.

**II. GENERAL REPORTING COMMENTS:**

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples to ensure method criteria are achieved throughout the entire analytical process.

**III. ANALYSES AND EXCEPTIONS:**

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

**NOTE:** The conversion of Gasoline should be considered an estimate. The molecular weight used in the conversion is 100.

Qualifiers:

- \* - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

### Chain of Custody

1. Is Chain of Custody complete? Yes  No  Not Present
2. How was the sample delivered? Client

### Log In

3. Coolers are present? Yes  No  NA
- Air samples.**
4. Shipping container/cooler in good condition? Yes  No
5. Custody Seals present on shipping container/cooler?  
(Refer to comments for Custody Seals not intact) Yes  No  Not Required
6. Was an attempt made to cool the samples? Yes  No  NA
7. Were all items received at a temperature of >0°C to 10.0°C \* Yes  No  NA
8. Sample(s) in proper container(s)? Yes  No
9. Sufficient sample volume for indicated test(s)? Yes  No
10. Are samples properly preserved? Yes  No
11. Was preservative added to bottles? Yes  No  NA
12. Is there headspace in the VOA vials? Yes  No  NA
13. Did all samples containers arrive in good condition(unbroken)? Yes  No
14. Does paperwork match bottle labels? Yes  No
15. Are matrices correctly identified on Chain of Custody? Yes  No
16. Is it clear what analyses were requested? Yes  No
17. Were all holding times able to be met? Yes  No

### Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes  No  NA

October 30, 2018

**Attention Sean Trimble:**

Fremont Analytical, Inc. received 1 sample(s) on 10/23/2018 for the analyses presented in the following report.

***Gasoline by NWTPH-Gx***  
***Volatile Organic Compounds by EPA Method 8260C***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Mike C. Ridgeway".

Mike Ridgeway  
Laboratory Director

DoD/ELAP Certification #L 17-135, ISO/IEC 17025:2005  
ORELAP Certification: WA 100009-007 (NELAP Recognized)

Date: 10/30/2018

---

**CLIENT:** Environmental Partners, Inc.  
**Project:** Whitney's  
**Work Order:** 1810365

## Work Order Sample Summary

---

Lab Sample ID	Client Sample ID	Date/Time Collected	Date/Time Received
1810365-001	INF-1023	10/23/2018 11:00 AM	10/23/2018 1:00 PM

---

**CLIENT:** Environmental Partners, Inc.

**Project:** Whitney's

---

WorkOrder Narrative:

**I. SAMPLE RECEIPT:**

Samples receipt information is recorded on the attached Sample Receipt Checklist.

**II. GENERAL REPORTING COMMENTS:**

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples to ensure method criteria are achieved throughout the entire analytical process.

**III. ANALYSES AND EXCEPTIONS:**

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

**NOTE:** The conversion of Gasoline Range Organics should be considered an estimate. The molecular weight used in the conversion is 100.

### Qualifiers:

- \* - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

### Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

### Chain of Custody

1. Is Chain of Custody complete? Yes  No  Not Present
2. How was the sample delivered? Client

### Log In

3. Coolers are present? Yes  No  NA
- Air samples.**
4. Shipping container/cooler in good condition? Yes  No
5. Custody Seals present on shipping container/cooler?  
(Refer to comments for Custody Seals not intact) Yes  No  Not Required
6. Was an attempt made to cool the samples? Yes  No  NA
7. Were all items received at a temperature of >0°C to 10.0°C \* Yes  No  NA
8. Sample(s) in proper container(s)? Yes  No
9. Sufficient sample volume for indicated test(s)? Yes  No
10. Are samples properly preserved? Yes  No
11. Was preservative added to bottles? Yes  No  NA
12. Is there headspace in the VOA vials? Yes  No  NA
13. Did all samples containers arrive in good condition(unbroken)? Yes  No
14. Does paperwork match bottle labels? Yes  No
15. Are matrices correctly identified on Chain of Custody? Yes  No
16. Is it clear what analyses were requested? Yes  No
17. Were all holding times able to be met? Yes  No

### Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes  No  NA

**RE: Whitney's**  
**Work Order Number: 1812026**

December 10, 2018

**Attention Sean Trimble:**

Fremont Analytical, Inc. received 1 sample(s) on 12/4/2018 for the analyses presented in the following report.

***Gasoline by NWTPH-Gx***  
***Volatile Organic Compounds by EPA Method 8260C***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Mike C. Ridgeway", written in a cursive style.

Mike Ridgeway  
Laboratory Director

DoD/ELAP Certification #L 17-135, ISO/IEC 17025:2005  
ORELAP Certification: WA 100009-007 (NELAP Recognized)

Date: 12/10/2018

## Work Order Sample Summary

---

Lab Sample ID	Client Sample ID	Date/Time Collected	Date/Time Received
1812026-001	INF - 1204	12/04/2018 10:10 AM	12/04/2018 12:05 PM

**CLIENT:** Environmental Partners, Inc.

**Project:** Whitney's

---

**I. SAMPLE RECEIPT:**

Samples receipt information is recorded on the attached Sample Receipt Checklist.

**II. GENERAL REPORTING COMMENTS:**

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples to ensure method criteria are achieved throughout the entire analytical process.

**III. ANALYSES AND EXCEPTIONS:**

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

**NOTE:** The conversion of Gasoline should be considered an estimate. The molecular weight used in the conversion is 100.

### Qualifiers:

- \* - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

### Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate
