Mr. Frank Winslow  
Toxics Cleanup Program  
Washington Department of Ecology – Central Regional Office  
1250 W. Alder Street  
Union Gap, WA 98903

**RE: Groundwater Monitoring Status Report and Data Gap Analysis**

Site Name: Michael Irrigation (aka John Michael Lease Site)  
Facility/Site ID No.: 3154383  
Cleanup Site ID No.: 2149  
Agreed Order No.: DE 15694

Dear Mr. Winslow

On behalf of BNSF Railway Company (BNSF), TRC is submitting this *Groundwater Monitoring Status Report* to document activities conducted at the John Michael Lease property (FSID 3154383) located adjacent to 5640 Sunset Highway in Cashmere, Washington (the Site, Figure 1) pursuant to the State of Washington, Department of Ecology (Ecology) Agreed Order No. DE 15694 Scope of Work (SOW) and Schedule and in accordance with the *Final Supplemental Groundwater Data Collection Work Plan* dated September 11<sup>th</sup>, 2018.

This letter report summarizes the groundwater monitoring activities performed during the 2<sup>nd</sup> and 3<sup>rd</sup> quarters of 2019. The 2<sup>nd</sup> quarter monitoring was performed on June 20<sup>th</sup>, 2019, and the 3<sup>rd</sup> quarter monitoring was conducted on September 19<sup>th</sup>, 2019. Based on, Sampling of wells MW-2, MW-3, and MW-4 was discontinued upon email approval from Ecology as sample results from those wells were consistently below Model Toxics Control Act (MTCA) Cleanup Levels (CULs) since 2012 (Ecology, 2019). Specific information about site background and monitoring methods, and the 4<sup>th</sup> quarter 2018 and 1<sup>st</sup> quarter 2019 results are available in the *Final Second Quarter Supplemental Groundwater Data Report* dated May 28<sup>th</sup>, 2019.

## GROUNDWATER MONITORING METHODS

On June 20<sup>th</sup> and September 19<sup>th</sup>, 2019 depth to groundwater was gauged in the seven Site monitoring wells (MW-1 through MW-7, Table 3) and groundwater samples were collected from wells MW-1, MW-5, MW-6, and MW-7 (Figure 2).

Groundwater samples were collected using the same methods as summarized in the approved *Final Supplemental Groundwater Data Collection Work Plan*, dated September 11, 2018. Geochemical parameters were recorded in the field and include dissolved oxygen (DO), pH, temperature, conductivity, turbidity, and oxidation reduction potential (ORP). Field sampling forms from the two monitoring events are provided in Appendix A.

The groundwater samples were submitted to Pace National of Mt. Juliet, Tennessee, under chain-of-custody protocols, for analysis of the following compounds:

- Diesel-Range Organics (DRO) and Oil-Range Organics (ORO) by Northwest Method NWTPH-Dx (with and without Silica Gel Cleanup [SGC] to determine the potential for interferences by naturally occurring non-petroleum organic matter during the extraction process);

## Groundwater Monitoring Status Report

The BNSF Railway Company, Michael Irrigation (aka John Michael Lease Site), Cashmere, Washington  
October 18, 2019

Page 2

- Gasoline-range organics (GRO) by Northwest Method NWTPH-Gx;
- Naphthalene and carcinogenic polycyclic aromatic hydrocarbons (cPAHs) by US EPA Method 8270D-SIM;
- Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) by US EPA Method 8260; and
- Total Organic Carbon (TOC) by US EPA Method 9060A.

Copies of the laboratory analytical reports and chain-of-custody documentation are provided in Appendix B. Laboratory data were validated using TRC's Analytical Data Review Checklist.

## GROUNDWATER MONITORING RESULTS

Groundwater analytical chemistry results are summarized below for the June 20<sup>th</sup>, 2019 event:

- TOC ranged from 1,130 micrograms per liter ( $\mu\text{g/L}$ ) (in the sample collected from MW-5) to 6,700  $\mu\text{g/L}$  (in the sample collected from MW-7).
- DRO and ORO were reported above their CUL (500  $\mu\text{g/L}$  for both DRO and ORO) in the sampled collected without SGC in MW-7 (DRO: 890  $\mu\text{g/L}$  and ORO: 610  $\mu\text{g/L}$ ) DRO or ORO were not detected in the same sample with SGC.
- DRO or ORO were not detected in the other sampled wells.
- There were no detections of GRO, BTEX, cPAHs, or naphthalene.

Groundwater analytical chemistry results are summarized below for the September 19<sup>th</sup>, 2019 event:

- TOC ranged from below the laboratory detection limit of 1,000  $\mu\text{g/L}$  (in the sample from MW-1) to 1,290  $\mu\text{g/L}$  (in the sample from MW-7).
- There were no detections of DRO (with and without SGC), ORO (with and without SGC), GRO, BTEX, cPAHs, or naphthalene.

Groundwater elevation is included in Table 1, groundwater analytical results are provided in Tables 2 and 3, and groundwater field parameters are provided in Table 4. Groundwater analytical results, groundwater elevations, and groundwater flow direction for the June 2019 and September 2019 groundwater monitoring events are shown on Figures 3 and 4, respectively.

The general groundwater flow direction for the 2<sup>nd</sup> quarter groundwater monitoring event is to the east north east (Figure 3), and the 3<sup>rd</sup> quarter is to the east (Figure 4), which is consistent with previous sampling events and is generally towards the Wenatchee River.

## CONCLUSIONS AND RECOMMENDATIONS

Based on the results from the groundwater sampling conducted to date, the 2018 CUL exceedances for DRO and ORO from well MW-1 are anomalous due to high turbidity in the sample collected during the 4Q 2018 monitoring event. Following redevelopment of well MW-1, results from the subsequent three quarterly monitoring events (March through September 2019) are representative of groundwater conditions, with significantly lower turbidity and concentrations below the MTCA CULs, consistent with previous sample results.

Monitoring well MW-7 is located on the southwest side of the tracks in an area of known soil impact. Groundwater analytical results from MW-7 for the past four quarters were generally at or below laboratory reporting limits, with some exceptions. DRO and ORO results from the Q4 2018 and Q2 2019 sampling events, analyzed without SGC, nominally exceeded the MTCA CUL of 500  $\mu\text{g/L}$  for both

October 18, 2019

Page 3

fractions (Table 2). However, the Q4 2018 and Q2 2009 exceedances in MW-7 also correlate with elevated total organic carbon (TOC) results during those events.

Downgradient monitoring wells MW-5 and MW-6 installed at locations on the northeast side of the tracks and hydraulically downgradient of the soil contamination near MW-7 have had no reported detections of site-related contaminants in groundwater since their installation in 2018.

The data demonstrate that impacts at the Site are limited to periodic exceedances of the groundwater CULs for DRO and ORO on the southwest side of the tracks. Groundwater samples collected from wells on the northeast downgradient, side of the tracks are consistently below CULs or not detected. As such, there are no data gaps remaining that would preclude from advancing the site forward to preparation of a Remedial Investigation.

TRC recommends cessation of groundwater monitoring and moving forward with preparation of the Remedial Investigation Report as outlined in the Agreed Order.

Sincerely,

Mathieu Piovesan  
Senior Geologist

Keith Woodburne, LG  
Managing Principal

Keith L. Woodburne

NOTES:

Results in **bold** denote concentrations detected at or above the applicable cleanup level.

< denotes analyte not detected at or above the given reporting limit.

-- sample was not analyzed for this constituent.

J denotes analyte was detected in the sample at an estimated concentration between the method detection limit and the reporting limit.

ABBREVIATIONS:

NE = no cleanup level established

EMR = EMR, Inc.

Farallon = Farallon Consulting, LLC

TRC = TRC Environmental

FOOTNOTES:

<sup>a</sup>Analyzed by U.S. Environmental Protection Agency Method 8270D-SIM.

<sup>b</sup>Washington State Department of Ecology, Model Toxics Control Act (MTCA) Cleanup Level and Risk Calculations(CLARC) Tables Method A values for Groundwater, Chapter 173-340 WAC, MTCA Chapter 70.105D RCW, Uniform Environmental Covenants Act Chapter 64.70 TCW. Publication No. 94-06. Revised August 2015.

<sup>c</sup>Total carcinogenic polycyclic aromatic hydrocarbons (cPAHs) derived using the total toxicity equivalency for benzo(a)pyrene method in Section 708(8) of Chapter 173-340 of the Washington Administrative Code.

For concentrations reported at less than the laboratory reporting limit, half the reporting limit was used to calculate the TEQ.

## GROUNDWATER SAMPLING RECORD

Sheet 1 of 1

WELL ID MW6

**Project Number:**

**Project Name:** JML - CASHmere

Date: 6-20-2019

Personnel: E. STARS

Weather: Clear, 70°

Well Construction	
Casing Material:	PVC
Casing Diameter:	2"
Completion Type:	Flwsy
Screened Interval:	8-18

Well Integrity	
Concrete Collar:	OK
Well Cap:	OK
Security Lock:	N/A
Standing Water:	None

Well Volume	
Initial DTW (ft btoc)	10-12
Measured Total Depth (ft btoc)	18.70
Height of water Column (ft)	
Casing Volume (gal)	

Sampling Method:	Peristaltic
Intake Depth (ft btoc):	13 ft

## Field Water Quality Measurements

#### **Comments:**

## **GROUNDWATER SAMPLING RECORD**

WELL ID MW5

Sheet i of 1

**Project Number:**

**Project Name:** JML - CASH mere

Date: 6/20/19

Personnel: E. S. Sims

Weather: Sunny

Well Construction	
Casing Material:	pvc
Casing Diameter:	2"
Completion Type:	flush
Screened Interval:	10-20

Well Integrity	
Concrete Collar:	O/C
Well Cap:	O/C
Security Lock:	N/A
Standing Water:	N/D

Well Volume	
Initial DTW (ft btoc)	12.66
Measured Total Depth (ft btoc)	19.95
Height of water Column (ft)	
Casing Volume (gal)	

Sampling Method: peristaltic pump  
Intake Depth (ft btoc): ~16 ft

## Field Water Quality Measurements

#### Comments:

## **GROUNDWATER SAMPLING RECORD**

WELL ID MW7

Sheet 1 of 1

**Project Number:**

Date: 6/20/19

**Project Name:** JML - CASHmere

Personnel: E-STAFF

**Weather:** Breezy, sunny

Well Construction	
Casing Material:	2"
Casing Diameter:	PVC
Completion Type:	FLUSH
Screened Interval:	14.5 - 9.5

Well Integrity	
Concrete Collar:	OK
Well Cap:	OK
Security Lock:	N/A
Standing Water:	NONE

Well Volume	
Initial DTW (ft btoc)	8.80
Measured Total Depth (ft btoc)	14.50
Height of water Column (ft)	
Casing Volume (gal)	

Sampling Method:	Peristaltic pump
Intake Depth (ft btoc):	12 feet

## Field Water Quality Measurements

**Comments:** initial purge flow from well has a chemical smell and a brown-color

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

MDL	Method Detection Limit.	<sup>1</sup> Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	<sup>2</sup> Tc
RDL	Reported Detection Limit.	<sup>3</sup> Ss
Rec.	Recovery.	<sup>4</sup> Cn
RPD	Relative Percent Difference.	<sup>5</sup> Sr
SDG	Sample Delivery Group.	<sup>6</sup> Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	<sup>7</sup> GI
U	Not detected at the Reporting Limit (or MDL where applicable).	<sup>8</sup> AI
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	<sup>9</sup> SC
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

## Qualifier      Description

B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.

- \* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
- \* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

**Results Disclaimer -** Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

### Abbreviations and Definitions

MDL	Method Detection Limit.	<sup>1</sup> Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	<sup>2</sup> Tc
RDL	Reported Detection Limit.	<sup>3</sup> Ss
Rec.	Recovery.	<sup>4</sup> Cn
RPD	Relative Percent Difference.	<sup>5</sup> Sr
SDG	Sample Delivery Group.	<sup>6</sup> Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	<sup>7</sup> Gl
U	Not detected at the Reporting Limit (or MDL where applicable).	<sup>8</sup> Al
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	<sup>9</sup> Sc
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

### Qualifier      Description

B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.

- \* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
- \* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.
