GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: N/A
Date Made Active in Reports: 01/05/2018	Last EDR Contact: 02/06/2018
Number of Days to Update: 14	Next Scheduled EDR Contact: 05/21/2018
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017	Source: EPA

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/05/2017	Telephone: 703-603-8704

	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 12/11/2017	Source: EPA

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/11/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/26/2017	Telephone: (206) 553-1200

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/11/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/26/2017	Telephone: (206) 553-1200
Date Made Active in Reports: 02/09/2018	Last EDR Contact: 01/19/2018

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/11/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/26/2017	Telephone: (206) 553-1200

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/11/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/26/2017	Telephone: (206) 553-1200

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/22/2017	Source: Department of the Navy
Date Data Arrived at EDR: 06/13/2017	Telephone: 843-820-7326
Date Made Active in Reports: 09/15/2017	Last EDR Contact: 02/09/2018
Number of Days to Update: 94	Next Scheduled EDR Contact: 05/28/2018
	Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 11/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/27/2017	Telephone: 703-603-0695
Date Made Active in Reports: 02/09/2018	Last EDR Contact: 02/27/2018
Number of Days to Update: 74	Next Scheduled EDR Contact: 06/11/2018
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 11/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/27/2017	Telephone: 703-603-0695

State- and tribal - equivalent CERCLIS

CSCSL: Confirmed and Suspected Contaminated Sites List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

State and tribal Brownfields sites

BROWNFIELDS: Brownfields Sites Listing
A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

TACOMA/PIERCE COUNTY:

Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

South Map:	6005543 SEATTLE SOUTH, WA
Version Date:	2014

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

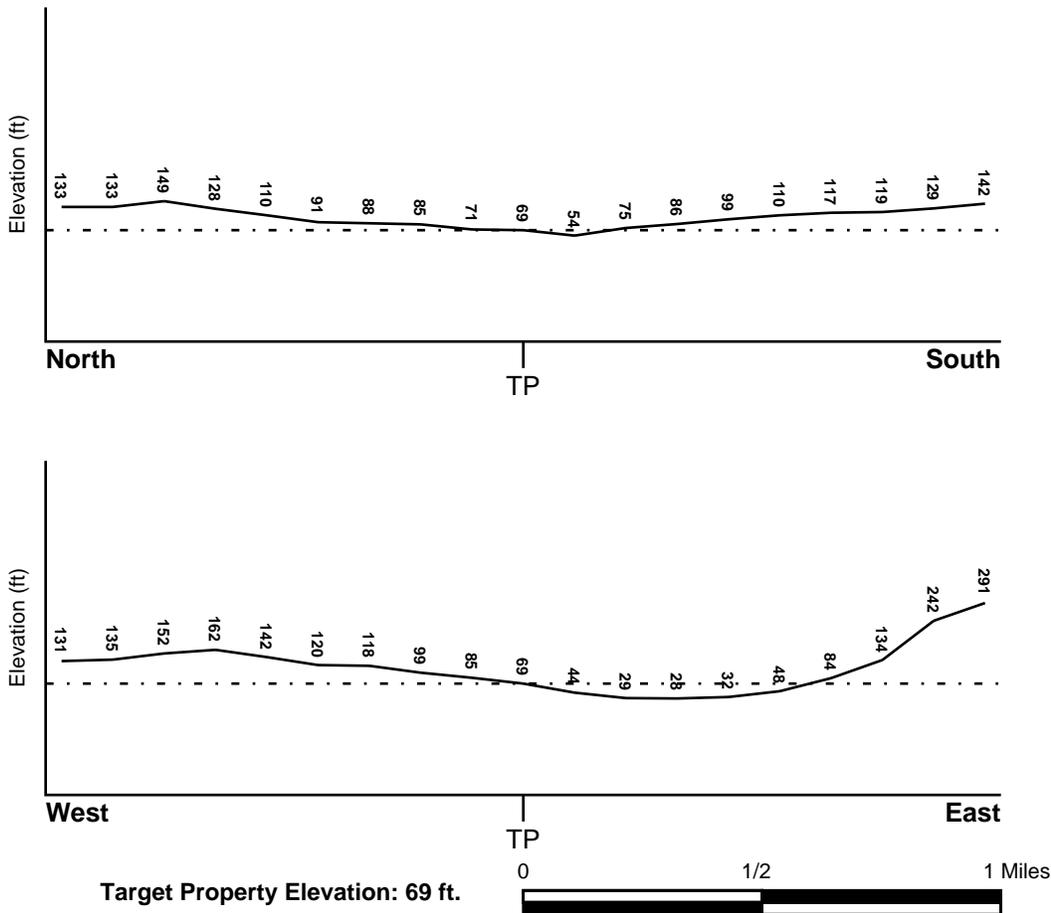

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
53033C0340F	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> SEATTLE NORTH	<u>NWI Electronic Data Coverage</u> YES - refer to the Overview Map and Detail Map
---	---

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile North
Site Name:	DANS PAINTS
Site EPA ID Number:	WAD043020767
Groundwater Flow Direction:	TOWARD LAKE UNION
Inferred Depth to Water:	not available
Hydraulic Connection:	The Lawton clay formation impedes the downward migration of ground water to the lower aquifer.
Sole Source Aquifer:	A sole source aquifer is not present at or near the site
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

11G	1/2 - 1 Mile SSW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: PILCHUCK
Soil Surface Texture: loamy sand
Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.
Soil Drainage Class: Somewhat excessive. Soils have high hydraulic conductivity and low water holding capacity. Depth to water table is more than 6 feet.
Hydric Status: Soil does not meet the requirements for a hydric soil.
Corrosion Potential - Uncoated Steel: MODERATE
Depth to Bedrock Min: > 60 inches
Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	20 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 20.00 Min: 6.00	Max: 7.30 Min: 6.10

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Ecology

Telephone: 360-407-6121

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Wells

Source: Department of Health

Telephone: 360-236-3148

Group A and B well locations.

Water Well Listing

Source: Public Utility District

Telephone: 206-779-7656

A listing of water well locations in Kitsap County.

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Listing

Source: Department of Natural Resources

Telephone: 360-902-1450

Locations that represent oil and gas test well sites in Washington State from 1890 to present.

RADON

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRRA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Ramboll were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Newark, NJ 07102
Contact: Jordan Lee

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ramboll were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Sanborn® Library search results

Certification #: 6185-4D05-9F4A

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Ramboll (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

GEOTECHNICAL REPORT FOR DEXTER OFFICE BUILDING

We are pleased to submit herewith five (5) copies of our report titled, "Geotechnical Report, Proposed Dexter Office Building, Seattle, Washington".

Our explorations revealed generally favorable foundation conditions for the proposed building. We believe that it could be supported on conventional spread and continuous footings below the Dexter Street grade. Conclusions and recommendations for foundation design and earthwork are included in the report.

We have appreciated the opportunity to be of service to you, and look forward to working with you on other projects in the future. We are available to answer any questions regarding conclusions and recommendations included in our report.

GEOTECHNICAL REPORT
PROPOSED OFFICE BUILDING
701 DEXTER AVENUE NORTH
SEATTLE, WASHINGTON

A. INTRODUCTION

This report presents the results of field explorations and geotechnical engineering studies for a proposed office building to be located at 701 Dexter Avenue North, Seattle, Washington. The purpose of the field explorations was to determine the soil and groundwater conditions in the proposed building area. To accomplish this, two borings were drilled in the building area to supplement existing subsurface data. Engineering studies were then performed to develop criteria for the design of the foundations for this structure. Included in this report are a description of the site and project, subsurface exploration procedures, interpretation of the subsurface conditions, and conclusions and recommendations from our engineering studies.

This study was conducted in accordance with our confirming letter dated October 24, 1980. Verbal authorization to proceed with this work also was received on October 24, 1980. The agreement letter signed by Mr. Richard Tracey of Olympic Associates Co. was received on November 3, 1980.

B. SITE AND PROJECT DESCRIPTION

The site for the proposed office building is located at 701 Dexter Avenue, Seattle, Washington. The 230 by 120-foot lot, shown on Figure 1, covers a half-block. It faces Roy Street on the south and also fronts on Aurora and Dexter Avenues on the west and east, respectively. The property is located on an east-facing hillside where change in elevation between Dexter and Aurora Avenues is approximately 18 feet. Locally, the property is mostly flat at the higher level along Aurora but has steep slopes along the east and south edges to accommodate the change in elevations along Roy Street and Dexter Avenue.

We understand that the proposed structure will be rectangular in plan and will contain two lower parking levels and four upper office floors. It will be approximately 150 feet long and 100 feet wide and will be generally positioned on the property as shown on Figure 1. Columns are planned to be spaced on about 30-foot centers. Interior and exterior column loads are estimated to typically be about 700 and 600 kips, respectively.

Access to the lower parking level will be from Dexter Avenue while the entrance to the second level will be from Aurora Avenue. The lowest foundation level for this structure will be at about elevation 111 feet (assumed site datum). This is roughly 3 feet below Dexter Avenue and 21 feet below Aurora Avenue.

C. SUBSURFACE EXPLORATIONS

1. Current Explorations

Subsurface explorations consisted of drilling two borings at the site on October 29, 1980. The borings, designated B-1 and B-2, were advanced each to depths of about 23 feet using a 3-3/8-inch I.D. hollow-stem continuous flight auger drilling rig. This drilling work was subcontracted to T&T Drilling Company of Seattle, Washington.

Sampling of the soil was generally accomplished at 2-1/2-foot intervals in the upper 20 feet and at 5-foot intervals thereafter using a 2-inch O.D. split-spoon sampler and Standard Penetration Tests procedures (ASTM: D 1586). All samples were placed in airtight jars and brought to our laboratory for detailed examination and physical testing, as necessary.

Our geologist was present at the site to locate the borings, observe the exploration work, obtain samples, and prepare descriptive logs of all borings. The locations of the two borings are shown on Figure 1. Descriptive logs of the two borings are presented in Appendix A, Figures A-1 and A-2.

The borings were located by taping from existing features provided on a preliminary plan map prepared by Bush, Roed, & Hitchings, Inc., P.S., from Seattle, Washington. Surface elevations shown on the boring logs were determined by plotting their locations on the plan map and extrapolating surface elevations indicated on the map to the boring locations. We understand that these elevations correspond to an assumed datum.

For monitoring groundwater levels, observation wells were installed in the two borings at the depths indicated on the boring logs. They consisted of 3/4-inch slotted plastic pipe tips connected to plastic riser pipes (3/4-inch). Backfill consisted of the sand from the borings. Water levels measured following their installation and on November 6, 1980, some 8 days later, both indicated dry conditions.

2. Previous Explorations

Three previous borings had been drilled at the site in 1971 for the City of Seattle as a part of the proposed Bay Freeway project. The locations of these borings are plotted on Figure 1. These borings were accomplished using similar hollow stem auger drilling and sampling equipment, except that the auger had a 2-1/4-inch I.D. hollow stem. The logs of these borings are summarized in Appendix A, Figure A-3. Surface elevations shown on these logs refer to City of Seattle Datum and should be adjusted to the site assumed datum by adding about 66 feet.

D. LABORATORY TESTING

Laboratory tests were performed on selected soil samples to classify and determine their pertinent engineering characteristics. The laboratory program was formulated with emphasis on determining the material's classification and gradation characteristics. This information is used primarily for evaluating excavated material for use as future backfill.

Selected samples were classified visually in the laboratory. From this information and the field logs, the boring logs in Appendix A were prepared. Detailed sample classifications are presented in Appendix B, Table B-1.

Natural moisture contents of selected samples were determined and the results are plotted on the boring logs along with the corresponding standard penetration resistance. The moisture contents are also tabulated in Table B-1.

Gradation tests were performed on two select samples, primarily to determine the percentage of fines (material passing the No. 200 sieve), of the site soils that are to be excavated. These tests were conducted in accordance with procedures described in ASTM Designation: D 422-63. The results of these tests are summarized in Figure B-1.

E. SUBSURFACE CONDITIONS

1. Subsurface Soils

The subsurface conditions at the proposed office building site are depicted in detail in the boring logs, Appendix A, and more generally in the profiles, Figures 2 through 4. In descending order, the three major soil zones encountered include 1) granular fill, 2) very dense, silty sand, and 3) very dense gravelly sand (Glacial Till).

The fill is generally a very loose to loose, brown, silty SAND with scattered gravel and occasional wood and silt fragments. Its average water content is about 17 percent. As shown in the profiles, its depth is extremely variable and was probably placed to generally level the property. Based on the borings and a 1910 topographic map of the area, the greatest amount of fill is probably present over the eastern and northern part of the site. Based on this information, we anticipate that the high retaining wall along the northern property line was probably built near the 1910 grade and retains fill material for its full height.

Underlying the fill is a layer of dense to very dense, gray-brown, silty SAND with scattered gravel. Locally it is slightly silty and clean, and often grades into a fine sandy SILT or SILT. Because of its high variation in silt content, the water content varies between about 8 and 18 percent, being greatest where the silt content is high. Except for its density, it is very similar to the overlying fill (see Figure B-1).

The lower soil zone encountered in the borings was a very dense silty, gravelly SAND commonly referred to in the Seattle area as Glacial Till. It characteristically has about 30 percent silt fines and generally contains mostly well-graded sands with variable amounts of gravel. Based on the profiles, Figures 2 and 4, it is relatively flat-lying across the northern part of the site but appears to dip rapidly to the south. Its average water content is about 7 percent.

2. Groundwater

Groundwater was not encountered in the recent borings during drilling. Also, observation wells installed near the bottom of the borings were generally dry eight days following drilling. Based on this information, it is our opinion that groundwater will probably not be encountered during building excavation if conducted during the dry season, usually about June through mid-October. During the wet season, some seepage may occur into the excavation locally, but it will probably be small.

F. ENGINEERING STUDIES AND RECOMMENDATIONS

1. Foundation Types

Design of the building foundations at the proposed site should consider the bearing support capabilities of the underlying soils and the expected settlements. As shown in Figures 2, 3, and 4, all materials below the foundation level at all five boring locations are very dense with high penetration resistance values which should provide competent foundation support. We therefore recommend that the building be supported on spread or continuous wall footings bearing directly on these very dense materials. These footings may be designed for an allowable soil bearing pressure of 4 tons per square foot (tsf). The recommended bearing value assumes that all footings are founded within the natural very dense materials generally at or below Elevation 114 feet (i.e., below Dexter Street grade). All footings should be founded a minimum of 18 inches below the adjacent ground surface or floor slab, whichever is lower. Minimum dimensions for spread footings should be two feet and 16 inches for wall footing.

2. Estimated Settlements

The total settlements that will develop are dependent upon the actual loads that are applied. For the preliminary column loads described previously, we estimate total settlements of about 3/4-inch and differential settlements about one-half of the total. These settlements will largely occur during the construction period, essentially as fast as the column and wall loads are applied, such that long-term differential settlements of the building should be relatively small.

3. Floor Slab Support

Lower floor slabs for this building may be placed directly on grade on the very dense materials. Prior to placing the slab, we recommend that the exposed soils be proof-rolled to compact materials that may have become loosened or disturbed due to the excavation process. Disturbed materials, particularly the very silty sands located above the Till, because of the high silt content, may not compact well, in which case they should be removed locally, replaced with a free-draining sand and gravel and compacted to obtain a uniform firm surface.

Once a firm base is obtained, we recommend that a 4 to 6-inch drainage blanket be provided beneath the floor slab, as shown in Figure 5. This, together with a vapor barrier, should maintain a dry lower floor.

4. Drainage

Although the current borings and observation wells were dry, we recommend that a periphery subdrain be installed around the building. Such a drain would prevent a build-up of hydrostatic pressures on the walls and remove water that may collect in the lower floor slab area either from leakage from surrounding utilities or from natural seepage of water over the glacial till from the northwest corner of the property. The glacial till, because of its denseness, is relatively impermeable and prevents water percolation causing it to move laterally as perched water. During the wet season, this could result in water seepage in the building foundation area.

The detail for the subdrains are shown on Figure 5. The drains should be placed a minimum of 18 inches below the floor slab. The drains should consist of 4-inch drain pipe laid open jointed or perforated pipe laid with the holes facing down and sloped to drain into a storm drain in the Dexter Street area. The drainage blanket recommended beneath the floor slab should be contoured slightly to provide drainage to the periphery of the building and hydraulically connected to these drains. An envelope of drainage materials should surround the drain pipe before backfilling. This material serves as a filter between the surrounding soils and the drain pipe to reduce the possibility of the fine grained on-site soils from plugging the pipe. The 18-inch blanket against walls should be hydraulically connected to the subdrain system.

To minimize ponding during extended periods of rainfall, we recommend that in nonpaved areas, the ground surface around the building be gently sloped away from the building to facilitate drainage. Downspouts should also be connected to tight lines to carry water off the property.

5. Lateral Earth Pressures

Walls below ground should be designed to resist lateral earth pressures. The magnitude of the pressure is dependent on the method of backfill placement, the type of backfill material, drainage provisions, and whether the wall is permitted to deflect after or during placement of backfill.

If the walls are allowed to deflect laterally or rotate an amount equal to about 0.001 times the height of the wall, an active earth pressure condition under static loading would prevail and an equivalent fluid weight of 35 pounds per cubic foot (pcf) is recommended for design of walls. For rigid walls that are restrained from deflecting at the top, an at-rest earth pressure condition would prevail and an equivalent fluid weight of 55 pcf is recommended. These pressures assume that drainage provisions, as shown on Figure 5, are included in the wall design. It also assumes that surcharge loads from street traffic and entryways into the parking levels are added to the wall pressures determined from the equivalent fluid weights.

6. Backfill Materials and Compaction

Backfill materials will be required behind walls below grade and to raise the grade in the basement of the commercial building presently covering the southwest corner of the site. The on-site silty sand materials, except for the glacial till, have a high percentage of silt fines (Figure 5) and a moisture content ranging between about 8 and 18 percent, the higher values being indicative of the more silty materials. Locally, the cleaner materials, if encountered in thick layers, may be suitable for fill; however, if layered with the more silty wetter materials, and mixed during excavation operations, they, in our opinion, will be wet of optimum and difficult to compact. We therefore recommend that these materials be used only in areas where settlements can occur and pavements or sidewalks are not planned. On-site glacial till, on the other hand, is about 4 percent dry of the optimum value needed for compaction and, in our opinion, could be used as backfill, both behind walls and to fill in the existing basement.

In the Puget Sound area, wet weather generally begins about mid-October and continues through about May. If possible, we recommend that earthwork be accomplished during the dry weather months as the on-site tills contain sufficient silt and clay fines to produce a cohesive mixture when wet. Such soils are highly susceptible to change in water content and become soft and difficult to place and compact if allowed to reach the wet side of optimum. Once they become wet, it is generally not feasible to dry out such soils during the wet season and they are usually wasted and replaced with imported granular materials.

If on-site materials are used as backfill in pavement areas they should be placed in maximum 6 to 8-inch loose lifts and compacted to at least 95 percent Modified Proctor Maximum dry density (ASTM: D 1157, Method C). In nonpavement areas, less compaction can be accepted, in our opinion (about 90 percent of optimum).

If there is an insufficient quantity of suitable on-site backfill materials, import backfill materials consisting of free-draining granular soil is recommended. A relatively well-graded sand or sand and gravel, generally as specified in note 2 on Figure 5, would meet this requirement and can normally achieve the specified compaction under both dry and wet weather construction conditions.

7. Pavements

Pavements in the form of entryways and exterior parking areas are also anticipated around the proposed building, possibly along Aurora Avenue. We recommend that the exposed subgrade soils be proofrolled and densely compacted to obtain an unyielding surface in the upper 12 inches. To provide frost protection, the total thickness of pavement and base course should be at least 9 inches. The base materials should be nonfrost-susceptible (i.e., should contain less than 3 percent of materials finer than 0.02 mm).

The subgrade values for design of pavement and base course thicknesses are controlled largely by the density and type of subgrade materials. For the type of soils present at the site, the following CBR and modulus of subgrade reaction, k, values are recommended for use in design of pavements:

<u>Subgrade Material</u>	<u>CBR, %</u>	<u>k, pci</u>
Existing loose fill	5	50
Compacted backfill	10	200
Very dense, native soils	25	350

The base course material should consist of a relatively clean, sand and gravel, a crushed new material, or a blend of commercial rock product. It should also be well-graded and nonfrost-susceptible, as described previously. This base course should also be thoroughly compacted to achieve a dense unyielding surface prior to placing the surface topping.

8. Excavation Slopes and Shoring

Maximum excavation of about 21 feet will be necessary in order to construct the building at its proposed lower grade. Temporary excavation slopes or shoring will probably be needed to maintain a stable excavation, depending upon the location of the excavation relative to adjacent streets or structures. If temporary slopes are planned, we recommend that for planning purposes and final siting of the building, they be excavated no steeper than 1 vertical on 1 horizontal. At this slope, some raveling,

erosion and slumping may occur; however, in our opinion, these instabilities would be local and generally limited to shallow surface conditions, rather than deep seated instabilities.

Actual temporary slopes, provided herein, should not be shown on the contract drawings, but should be made the responsibility of the contractor, since he is present on a day to day basis to observe site conditions. Locally for the shallower excavations, temporary slopes steeper than recommended above may be feasible.

In the proposed building's present position, Figure 1, the small retaining wall in the northwest corner of the property could be damaged if steep temporary slopes are used in this area. Two approaches appear feasible for this area. The most practical approach, in our opinion, would be to make an agreement with the owner to replace the existing wall if damaged. The second approach would be to shore the excavation slope. If vertical shoring is required, we recommend that it be designed for the following pressures:

<u>Shoring Method</u>	<u>Earth Pressure</u>
1. Conventional bracing	Equivalent fluid pressure of 35 pcf.
2. Cantilever shoring (soldier piles with lagging)	Same as 1.
3. Tieback shoring	Rectangular Pressure Diagram with load of $20H$ (psf) where H is the excavation height in feet.

Further details regarding design of the tieback anchors can be provided if this method is considered.

G. LIMITATIONS

The analyses, conclusions and recommendations contained in this report are based on site conditions as they presently exist and further assume that the exploratory borings are representative of the subsurface conditions throughout the site, i.e., the subsurface conditions everywhere are not significantly different from those disclosed by the exploration. If, during construction, subsurface conditions different from those

encountered in the exploratory holes are observed or appear to be present beneath excavations, we should be advised at once so that we can review these conditions and reconsider our recommendations where necessary. If there is a substantial lapse of time between the submission of this report and the start of work at the site, or if conditions have changed due to natural causes or construction operations at or adjacent to the site, it is recommended that this report be reviewed to determine the applicability of the conclusions and recommendations considering the changed conditions and time lapse.

If you desire we will review those portions of the plans and specifications which pertain to earthwork and foundations to determine if they are consistent with our recommendations. If desired, we are also available to probe footing foundations to determine if actual conditions throughout the site are consistent with our recommended bearing value or to make other field measurements or observations, as necessary.

This report was prepared for the exclusive use of the Owner and Architect and/or Engineer in the design of the subject facility. It should be made available to prospective Contractors and/or the Contractor for information on factual data only and not as a warranty of subsurface conditions, such as those interpreted from the boring logs presented in discussions of subsurface conditions included in this report.

Unanticipated soil conditions are commonly encountered and cannot be fully determined by merely taking soil samples or test borings. Such unexpected conditions frequently require that additional expenditures be made to attain a properly constructed project. Therefore, some contingency fund is recommended to accommodate such potential extra costs.

BORING NO.	SAMPLE NO.	DEPTH, FT.	WATER CONTENT, %	SOIL DESCRIPTION
B-1	S-1	2.5-4.0	23.6	Medium dense, mottled gray and brown, slightly clayey, silty, fine to coarse SAND; scattered fine gravel and charcoal debris; numerous iron-oxide stains; trace of fine organics; lenses of fine sandy clayey silt.
	S-3	7.5-9.0	17.1	Dense, gray-brown, fine gravelly, silty, fine to coarse SAND; trace of coarse gravel; lenses of fine sandy silt.
	S-5	12.5-14.0	17.4	Very stiff, light brown, fine sandy SILT; scattered lenses of clean, fine to medium sand trace of medium to coarse sand and fine gravel; trace of iron-oxide stains.
	S-7	17.5-17.9	7.8	Very dense, gray-brown, fine gravelly, silty, fine to coarse SAND; trace of coarse gravel.
	S-1	2.5-4.0	16.6	Loose, light brown, fine gravelly, silty, fine to coarse SAND; scattered charcoal debris and iron-oxide stains; thin lenses of fine sandy, silty clay.
B-2	S-3	7.5-9.0	17.2	Loose, mottled light brown, red-brown and dark brown, fine gravelly, silty, fine to coarse SAND; scattered coarse gravel, iron-oxide stains and organics; one thin lense of silty clay.
	S-5	12.5-14.0	12.3	Loose, red-brown, fine gravelly, silty, fine to coarse SAND; scattered burnt wood fragments and organics; trace of coarse gravel.
	S-7	17.5-19.0	13.3	Dense, mottled gray and brown, silty, fine gravelly, fine to coarse SAND; numerous iron-oxide stains; thin lenses of fine sandy, silty clay.
	S-9	22.5-23.1	6.7	Very dense, gray, silty, fine gravelly, fine to coarse SAND; trace of coarse gravel.

EXECUTIVE SUMMARY

Farallon Consulting, L.L.C. (Farallon) has prepared this Phase I Environmental Site Assessment (Phase I ESA) Report for the property at 701 Dexter Avenue North in Seattle, Washington (herein referred to as the Site). The Phase I ESA was conducted by Mr. Clifford Nale and was reviewed and approved by Ms. Tina Huff. Both are experienced environmental professionals in the field of Phase I ESAs and related environmental investigations.

This Phase I ESA Report was prepared for Unico Properties LLC in accordance with *Work Order 463-016-WO 001* for Phase I Environmental Site Assessment, 701 Dexter Avenue North, Seattle, Washington dated July 15, 2015, prepared by Farallon. The scope of work for this Phase I ESA is consistent with ASTM International Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13). ASTM E1527-13 is intended to assist the user in satisfying one of the requirements to qualify for protection from potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act as the innocent landowner, contiguous property owner, or bona fide prospective purchaser. ASTM E1527-13 constitutes “all appropriate inquiry” into the previous ownership, uses, and environmental conditions of a property consistent with good commercial or customary practice, as defined in Section 9601(35)(B) of Title 42 of the U.S. Code.

There were no deviations from ASTM E1527-13 during the completion of this Phase I ESA, with the exception of providing an opinion regarding recommendations for additional investigation requested by Unico. Limiting conditions encountered during the completion of the Phase I ESA included the presence of vehicles parked on the two-level parking structure on lower levels of the Site that prevented Farallon from observing the entire ground surface of the Site, and furniture and equipment in the Site building that prevented Farallon from observing the entire interior floor surface. Based on information obtained from the Site representative, these limiting conditions are not expected to hinder the conclusions of this report.

The purpose of the Phase I ESA was to identify, as practicable, recognized environmental conditions on the Site or proximate to the Site that have caused and/or may cause an adverse environmental condition. This Phase I ESA Report provides the results of investigation into past and present ownership and uses of the Site, consistent with good commercial and/or customary practice.

The Site includes King County Tax Parcel No. 224900-0245, which totals approximately 0.62 acre of land developed with a six-story reinforced concrete structure with parking on the first two levels of the building that comprises approximately 61,800 square feet of commercial space, built in 1984. The Site building currently is occupied by 15 tenants for commercial office use. Access to the Site is gained from Dexter Avenue North, east of the Site, and Aurora Avenue North (Highway 99), west of the Site. According to the King County Department of Assessments, the Site is owned by 702 Aurora North Joint Venture.

At the time of the site reconnaissance, Farallon observed minor amounts of hazardous substances, including janitorial cleaning supplies and photocopier/printing toner, throughout the tenant suites. The materials were observed to be properly labeled and stored in designated areas of the building. No staining or evidence of releases was observed in or around the containers at the time of the reconnaissance. An electrical transformer room was observed on the lower parking level. No staining or evidence of releases was observed in or around the electrical transformer room. Farallon also observed de minimis petroleum staining throughout paved parking areas of the Site that appeared to be from parked vehicles on the Site.

Historically, the Site was developed with one single-family residence in 1893 and two single-family residences and two multifamily residences from 1905 to at least 1925. From 1936 to the early 1980s, the Site was depicted as developed with a restaurant on the western portion of the Site and asphalt-paved parking on the remainder of the Site. From 1984 to the present, the current Site building has occupied the Site. City directory listings for the Site address included numerous residences from 1920 to 1925 and numerous commercial businesses, including Gray and Osborne, Inc. Consulting Engineers, Francis and Company, LLC, and Thomas Hart Advertising, from 1986 to 2013.

Farallon did not observe evidence of or locate records of heating oil tanks at the Site. Based on the dates when historical residences occupied the Site, heating oil stored in aboveground storage tanks or underground storage tanks (USTs) may have been used to heat the structures. However, during construction of the current building at the Site in 1984, it is likely that any remaining subsurface features and/or impacted soil associated with historical operations at the Site would have been removed. In the event that heating oil tanks are encountered during future redevelopment of the Site, they should be removed and disposed of in accordance with local and state regulations.

Adjacent properties at the time of Farallon's site reconnaissance included a multifamily residential building and a commercial office building to the north, a vacant lot to the east, City of Seattle Department of Transportation to the south, and a multifamily residential building and restaurant to the west across Aurora Avenue North.

Historically, adjacent properties consisted of single-family residences from at least 1893 to 1925. By 1936, the north-, south-, and east-adjacent properties were developed with commercial structures while the west-adjacent properties remained single-family residences. From the early 1940s through the late 2000s, adjacent property uses remained consistent, with the addition of auto repair facilities on the north-adjacent properties beginning in the 1940s. City directory listings for adjacent properties from 1935 to 2013 included numerous residences on the west-adjacent property; commercial businesses, including auto repair facilities on the north-adjacent property; and a dry cleaning facility and UST use on the east-adjacent property. The south-adjacent property included numerous commercial businesses and light manufacturing from the 1920s to 2013, including a gasoline station in 1920 and an auto repair facility in 1937 in addition to an oil truck garage with oil burner sales and service on the southwest-adjacent property in the 1950s. The southwest-adjacent property was redeveloped with an electronics

school by the 1960s. By 2011, the west-adjacent property was redeveloped into a large multifamily residential building and, by 2012, the eastern portion of the north-adjacent property also was developed into a large multifamily residential building. In 2013, the east-adjacent property was demolished and remains vacant to the present. Based on the redevelopment of adjacent properties that formerly operated as repair facilities and the southwest-adjacent property that formerly operated as an oil truck garage, these former facilities do not represent a recognized environmental condition in connection with the Site.

In 1930, the east-adjacent property at 700 Dexter Avenue North was a refueling facility that included multiple USTs containing petroleum fuel. Between 1947 and 1966, an automotive repair shop also was located at the property. Dry cleaning operations related to American Linen Supply Company began at the property in 1966 and operated through the mid-1990s. From the mid-1990s through 2012, buildings on the property were occupied by businesses that included automotive repair, a bakery, and a car rental office. The property was vacant in 2013 in preparation for demolition of the existing structures and redevelopment of the lot. Farallon has actual knowledge regarding the east-adjacent property, including the known chlorinated solvent groundwater plume in the vicinity that originated from this property due to historical operations. Contaminants of concern at the property consist of chlorinated volatile organic compounds, including tetrachloroethene, trichloroethene, dichloroethene, and vinyl chloride. Other contaminants include gasoline-, diesel-, and oil-range petroleum hydrocarbons; and benzene, toluene, ethylbenzene, and xylenes. Contamination is confirmed in soil and in groundwater beneath the property. The plume extends beyond the property boundary; however, the plume boundaries have not been fully defined. The potential migration of hazardous substances from the east-adjacent property to the Site represents a recognized environmental condition in connection with the Site.

The Environmental Data Resources, Inc. (EDR) database report prepared for the Site (EDR report) identified the Site address on the State of Washington's SPILLS regulatory database. The listing is related to an incident dated August 21, 2003. Farallon searched the Washington State Department of Ecology Toxics Cleanup Program database for the Site, but found no listings. Regulatory files for the Site were not reviewed due to the time and/or cost constraints of this Phase I ESA. Based on the information provided by EDR and the current regulatory status of the Site, this listing does not represent a recognized environmental condition in connection with the Site.

The EDR report identified several facilities adjacent to or proximate to the Site on various regulatory databases reviewed. The American Linen facility located on the east-adjacent property has a known release. Farallon has actual knowledge regarding the east-adjacent property, including the known chlorinated solvent groundwater plume that originated from this property. Based on Farallon's actual knowledge regarding the known release at this property, the current regulatory status, and distance of this property from the Site, the potential migration of hazardous substances to the Site represents a recognized environmental condition for the Site.

Based on review of the Site history, interviews with persons knowledgeable about the Site, reconnaissance of the Site and adjacent properties, and review of regulatory agency lists, this assessment identified the potential migration of hazardous substances from the east-adjacent property at 700 Dexter Avenue North to the Site as a recognized environmental condition in connection with the Site.

At the request of Unico, Farallon has included recommendations for the Site that are beyond the scope of ASTM E1527-13. According to recent soil and groundwater data available for the 700 Dexter Avenue North property and the topographic location of this property relative to the Site, the chlorinated solvent groundwater plume likely does not extend up-gradient beyond the west side of Dexter Avenue North, east of the Site. In addition, the first two levels of the Site building, which are aboveground, include paved parking areas; therefore, the potential for vapor intrusion into occupied areas of the Site building is highly unlikely. Based on information obtained during completion of the Phase I ESA, additional investigation of the Site is not warranted at this time. In the event the Site is redeveloped and soil is excavated and/or groundwater is encountered during construction activities, the Site should be evaluated for the potential migration of hazardous substances from the east-adjacent 700 Dexter Avenue North property.

1.0 INTRODUCTION

This Phase I Environmental Site Assessment (Phase I ESA) Report was prepared by Farallon Consulting, L.L.C. (Farallon) for the property at 701 Dexter Avenue North in Seattle, Washington (herein referred to as the Site) (Figure 1). This section discusses the project authorization, and the qualifications of the environmental professionals conducting and reviewing the Phase I ESA work. Also included in this section are the project purpose, objective, scope of services, deviations, limiting conditions, and data gaps.

1.1 PROJECT AUTHORIZATION

This Phase I ESA Report was prepared for Unico Properties LLC in accordance with the *Work Order 463-016-WO 001* for Phase I Environmental Site Assessment, 701 Dexter Avenue North, Seattle, Washington dated July 15, 2015, prepared by Farallon. The scope of work for this Phase I ESA is consistent with ASTM International Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13).

1.2 PROFESSIONAL QUALIFICATIONS

The Phase I ESA was conducted by Mr. Clifford Nale and was reviewed and approved by Ms. Tina Huff. Both have an understanding of surface and subsurface environmental conditions and the processes used to evaluate these conditions, and the ability to develop opinions regarding conditions indicative of a release or threatened release of hazardous substances and petroleum products. These environmental professionals have developed and performed all appropriate inquiry, in conformance with the standards and practices set forth in Part 312 of Title 40 of the Code of Federal Regulations. The professional qualifications of Mr. Nale and Ms. Huff are provided in Appendix A.

1.3 PROJECT PURPOSE AND OBJECTIVE

The purpose of the Phase I ESA was to identify, as practicable, recognized environmental conditions on the Site and within the appropriate study area that have caused and/or may cause an adverse environmental impact. ASTM E1527-13 is intended to permit a user to satisfy one of the requirements to qualify for protection from potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act as the innocent landowner, contiguous property owner, or bona fide prospective purchaser. ASTM E1527-13 constitutes “all appropriate inquiry” into the previous ownership, uses, and environmental conditions of a property consistent with good commercial or customary practice, as defined in Section 9601(35)(B) of Title 42 of the U.S. Code.

The objective of the Phase I ESA was to perform an appropriate inquiry into past and present ownership and uses of the Site, consistent with good commercial and/or customary practice. This Phase I ESA Report is to be used as a risk management tool to meet all appropriate inquiry

requirements and the Comprehensive Environmental Response, Compensation, and Liability Act liability defense. The Phase I ESA does not guarantee that there are no impacts to the Site.

For the purpose of this Phase I ESA Report, the term “recognized environmental condition” is defined as the presence or likely presence of any hazardous substance or petroleum product in, on, or at the Site due to releases to the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment. The term is not intended to include “de minimis conditions” that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the applicable governmental agencies.

The term “controlled recognized environmental condition” is defined as a recognized environmental condition resulting from a past release of a hazardous substance or petroleum product that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances of petroleum products allowed to remain in-place subject to implementation of required controls.

The term “historical recognized environmental condition” is defined as a past release of any hazardous substance or petroleum product that has occurred in connection with the Site and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the Site to any required controls.

1.4 PROJECT SCOPE OF SERVICES

This Phase I ESA Report has been prepared in accordance with the scope of work presented in ASTM E1527-13 and the letter regarding Proposal for Phase I Environmental Site Assessment, 701 Dexter Avenue North, Seattle, Washington dated July 15, 2015, prepared by Farallon.

The scope of work for this Phase I ESA included a records review, literature research and review, a site reconnaissance, interviews with individuals familiar with the Site, interviews with local governmental officials, and preparation of this report.

1.5 DEVIATIONS

There were no deviations from ASTM E1527-13 during the completion of this Phase I ESA, with the exception of providing an opinion regarding recommendations for additional investigation requested by Unico.

1.6 LIMITING CONDITIONS

Limiting conditions encountered during the completion of the Phase I ESA included the presence of vehicles parked on the two-level parking structure on lower levels of the Site that prevented Farallon from observing the entire ground surface of the Site, and furniture and equipment in the Site building that prevented Farallon from observing the entire interior floor surface. Based on

information obtained from the Site representative, these limiting conditions are not expected to hinder the conclusions of this report.

1.7 DATA GAPS

Data gaps may affect the ability to identify recognized environmental conditions and Farallon's ability to render opinions and conclusions for presentation in the Phase I ESA Report. Farallon did not identify significant data gaps during the completion of this Phase I ESA.

04/16/2018 8:58 AM

2.0 SITE OVERVIEW

This section includes an overview of the Site location, improvements, and operations. A description of adjacent and surrounding land use also is provided.

2.1 SITE LOCATION

The Site is northwest of intersection of Dexter Avenue North and Roy Street in Seattle, King County, Washington. The location is in a commercial and residential area in the City Center area of downtown Seattle (Figure 1).

2.2 SITE DESCRIPTION

The Site includes King County Tax Parcel No. 224900-0245, which totals approximately 0.62 acre of land developed with a six-story reinforced concrete structure with parking on the first two levels of the building that comprises approximately 61,800 square feet of commercial space, built in 1984. The Site building currently is occupied by 15 tenants for commercial office use. Access to the Site is gained from Dexter Avenue North, east of the Site and Aurora Avenue North (Highway 99), west of the Site.

Figure 2 presents a plan map of the Site. Additional details pertaining to the Site are provided in Section 8.2, Site Reconnaissance Observations. Site photographs are presented in Appendix B.

2.3 SITE OPERATIONS

According to the King County Department of Assessments, the Site is owned by 702 Aurora North Joint Venture. The Site building currently is occupied by 15 tenants for commercial office use.

2.4 ADJACENT AND SURROUNDING LAND USE

Adjacent properties at the time of Farallon's site reconnaissance included a multifamily residential building and a commercial office building to the north, a vacant lot to the east, City of Seattle Department of Transportation to the south, and a multifamily residential building to the west across Aurora Avenue North. No visual evidence of recognized environmental conditions was observed on abutting or nearby properties during the site reconnaissance with the exception of several groundwater monitoring wells observed in the right-of-way in the vicinity of the east-adjacent property and on the east-adjacent property. Farallon observed equipment likely used for remediation operations on the east-adjacent property. Farallon has actual knowledge regarding the east-adjacent property, including the known chlorinated solvent groundwater plume that originated from this property due to the historical operations discussed in Section 6.2, Adjacent and Other Facility Listings. The plume extends beyond the east-adjacent property boundary; however, the plume boundaries have not been fully defined. Based on Farallon's actual knowledge regarding the known release at this property, the current regulatory status, and

distance of this property from the Site, the potential migration of hazardous substances to the Site represents a recognized environmental condition in connection with the Site. Observations were restricted to areas readily observable from the Site, and to public rights-of-way within an approximately 0.25-mile radius of the Site.

Confidentially provided to
Hart Cole
Alexandria Real Estate Equities, Inc.
169.234.207.217
04/16/2018 8:58 AM

3.0 PHYSICAL SETTING

The physical setting of the Site, including topography, geology, and hydrogeology, is described in this section. Farallon's assessment of sensitive receptors in the area also is discussed.

3.1 TOPOGRAPHY

Farallon reviewed the U.S. Geological Survey (USGS) topographic map for Seattle North, Washington dated 1983 provided by Environmental Data Resources, Inc. (EDR). The map depicts that the Site is at an elevation of approximately 50 feet above mean sea level. The Site topography is relatively flat. Regional topography is generally flat, with a slight slope down to the east toward Lake Union.

3.2 GEOLOGY AND HYDROGEOLOGY

The Puget Sound region is underlain by Quaternary sediments deposited by a number of glacial episodes. Deposition occurred during a number of glacial advances and retreats, which created the existing subsurface conditions. The regional sediments consist primarily of interlayered and/or sequential deposits of alluvial clays, silts, and sands that typically are situated over deposits of glacial till that consist of silty sand to sandy silt with gravel. Outwash sediments consisting of sands, silts, clays, and gravels were deposited by rivers, streams, and post-glacial lakes during the glacial retreats. With the exception of the most-recent recessional deposits, the outwash sediments have been over-consolidated by the overriding ice sheets.

Groundwater migration in the Puget Sound region generally is confined to the most-recent alluvial deposits of sands and gravel. These materials commonly are underlain, and occasionally overlain, by relatively impermeable glacial till deposits. Lateral and vertical migration of the groundwater is impeded by the dense and relatively impermeable nature of the till, and by the commonly laterally discontinuous nature of the aquifer-bearing materials. Perched and discontinuous zones of shallow groundwater may be present seasonally and locally above the impervious till. Shallow groundwater flow direction typically can be estimated by examination of surface topography or by the location of nearby surface water bodies.

Based on the Farallon's actual knowledge of the Site vicinity, groundwater flows to the east. Farallon cannot determine the precise groundwater depth on the Site without the installation of groundwater monitoring wells.

3.3 SENSITIVE RECEPTORS

Farallon conducted a limited assessment of sensitive receptors on or in the vicinity of the Site that was confined to visually apparent features such as surface water bodies (e.g., low-lying wet areas, streams, ponds) and residential and recreational areas. Farallon's assessment of sensitive receptors also included a review of readily ascertainable information relating to the presence of private, semiprivate, public, and industrial water supply wells.

According to The EDR Radius Map Report with GeoCheck prepared for the Site dated July 21, 2015 (EDR report), the Site is not located in a 100-year or 500-year flood plain. No public or private water supply wells are present within 0.5 mile of the Site. The nearest water body and federally designated wetland identified is Lake Union, less than 0.25 mile east of the Site.

4.0 USER-PROVIDED INFORMATION

Farallon understands that the user of this report, Unico Properties LLC, is seeking to follow the standards set forth in ASTM E1527-13 to complete an environmental assessment of the Site. The user has specific responsibilities for fulfilling ASTM E1527-13 requirements to help identify the possibility of recognized environmental conditions in connection with the Site. These responsibilities do not require the technical expertise of an environmental professional, and were not performed by the environmental professional who conducted the Phase I ESA at the Site.

To facilitate fulfillment of the ASTM E1527-13 requirements identified below, Farallon provided Unico Properties LLC with a copy of the *Phase I ESA User Questionnaire* (User Questionnaire) to complete. The User Questionnaire is provided in Appendix C of this Phase I ESA Report.

4.1 TITLE AND LIEN RECORDS

Unico Properties LLC indicated that it was not aware of environmental liens against the Site.

4.2 EXPERIENCE AND SPECIALIZED KNOWLEDGE

Unico Properties LLC indicated that it has no experience or specialized knowledge regarding the Site.

4.3 COMMONLY KNOWN INFORMATION

Unico Properties LLC indicated that it is not aware of commonly known information regarding the Site that would lead to the identification of recognized environmental conditions.

4.4 PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT USERS

Unico Properties LLC will rely on this Phase I ESA report.

4.5 PREVIOUS ENVIRONMENTAL STUDIES

Previous environmental studies were not provided to Farallon for review.

5.0 SITE BACKGROUND AND HISTORY

Farallon reviewed the following historical sources during the completion of this Phase I ESA:

- Aerial photographs of the Seattle, Washington area dated 1936, 1943, 1953, 1956, 1965, 1969, 1977, 1980, 1985, 1990, 2006, 2009, and 2011 obtained from EDR; and dated 2012, 2014 and 2015 obtained from Google Earth;
- Cole Information Services, Pacific Northwest Bell Telephone Company, and Polk City Directories of Seattle, Washington dated 1920, 1925, 1930, 1935, 1940, 1944, 1951, 1955, 1960, 1966, 1970, 1975, 1977, 1980, 1986, 1990, 1996, 2005, 2008, and 2013 obtained from EDR;
- USGS topographic maps of Seattle, Washington dated 1894, 1897, and 1909; Snohomish, Washington dated 1895; and Seattle North dated 1949, 1968, and 1983 obtained from EDR; and
- Sanborn Fire Insurance Maps for the Site dated 1893, 1905, 1917, 1950, and 1969 obtained from EDR.

Farallon is not responsible for the accuracy or completeness of the historical sources reviewed. The historical sources documented were reasonably ascertainable and practically reviewable during the completion of this Phase I ESA.

5.1 SITE

Historically, the Site was developed with one single-family residence in 1893 and two single-family residences and two multifamily residences from 1905 to at least 1925. From 1936 to the early 1980s, the Site was depicted as developed with a restaurant on the western portion of the Site and asphalt-paved parking on the remainder of the Site. From 1984 to the present, the current six-story commercial building with parking on the first two levels of the building has occupied the Site. City directory listings for the Site address included numerous residences from 1920 to 1925 and numerous commercial businesses, including Gray and Osborne, Inc. Consulting Engineers, Francis and Company LLC, and Thomas Hart Advertising, from 1986 to 2013.

Farallon did not observe evidence of or locate records of heating oil tanks at the Site. Based on the dates when historical residences occupied the Site, heating oil stored in aboveground storage tanks (ASTs) or underground storage tanks (USTs) may have been used to heat the former structures. However, during redevelopment of the Site with the existing Site building in 1984, it is likely that any remaining subsurface features and/or impacted soil associated with historical operations at the Site would have been removed. In the event that heating oil tanks are encountered during future redevelopment of the Site, they should be removed and disposed of in accordance with local and state regulations.

5.2 ADJACENT PROPERTIES

Historically, adjacent properties consisted of single-family residences from at least 1893 to 1925. By 1936, the north-, south-, and east-adjacent properties were developed with commercial structures while the west-adjacent properties remained single-family residences. From the early 1940s through the late 2000s, adjacent property uses remained consistent, with the addition of auto and repair facilities on the north-adjacent properties beginning in the 1940s. City directory listings for adjacent properties from 1935 to 2013 included numerous residences on the west-adjacent property; commercial businesses, including auto repair facilities, on the north-adjacent property; and a dry cleaning facility and UST use on the east-adjacent property. The south-adjacent property included numerous commercial businesses and light manufacturing from the 1920s to 2013, including a gasoline station in 1920 and an auto repair facility in 1937 in addition to an oil truck garage with oil burner sales and service on the southwest-adjacent property in the 1950s. The southwest-adjacent property was redeveloped with an electronics school by the 1960s. By 2011, the west-adjacent property was redeveloped into a large multifamily residential building and, by 2012, the eastern portion of the north-adjacent property also was developed into a large multifamily residential building. In 2013, the east-adjacent property was demolished and remains vacant to the present. Based on the redevelopment of adjacent properties that formerly operated as repair facilities and the southwest-adjacent property that formerly operated as an oil truck garage, these former facilities do not represent a recognized environmental condition in connection with the Site. Additional information regarding these former facilities is presented in Section 5.2, Adjacent and Other Facility Listings.

In 1930, the east-adjacent property was the site of a refueling facility that included multiple USTs containing petroleum fuel. Between 1947 and 1966, an automotive repair shop also was located at the property. Dry cleaning operations related to American Linen Supply Company began at the property in 1966 and operated through the mid-1990s. From the mid-1990s through 2012, buildings on the property were occupied by businesses that included automotive repair, a bakery, and a car rental office. The property was vacant in 2013 in preparation for demolition of the existing structures and redevelopment of the lot. Farallon has actual knowledge regarding the east-adjacent property, including the known chlorinated solvent groundwater plume that originated from this property due to historical operations. The plume extends beyond the property boundary; however, the plume boundaries have not been fully defined. Based on Farallon's actual knowledge regarding the known release at this property, the current regulatory status, and distance of this property from the Site, the potential migration of hazardous substances to the Site represents a recognized environmental condition in connection with the Site.

6.0 REGULATORY REVIEW

EDR conducted a review of environmental regulatory agency database listings to identify reported environmental issues related to the Site and facilities in the Site vicinity. Farallon used the greater of each approximate minimum search distance from the Site for each of the referenced federal and state environmental databases, as specified in ASTM E1527-13. The descriptions of the databases searched and the associated search distances from the Site are provided in the EDR report presented in Appendix D.

Farallon reviewed the results of the EDR report to note reported facilities in the vicinity of the Site that were considered to have a potential to adversely impact the Site (i.e., are known to have resulted in or are expected to result in a recognized environmental condition). Reported facilities identified in the EDR report were evaluated with respect to the nature and extent of a given release, the distance of the reported facility from the Site, the stratigraphy of soils, the expected soil permeability, and the topographic position of a reported facility with respect to known or expected local and/or regional groundwater flow direction.

The descriptions of the databases searched, the complete database names for the abbreviations used in this Phase I ESA Report, and the associated search distances from the Site are provided in the EDR report presented in Appendix D.

6.1 ON-SITE LISTINGS

The EDR report identified the Site address on the State of Washington's SPILLS regulatory database. The listing is related to an incident dated August 21, 2003. Farallon searched the Washington State Department of Ecology (Ecology) Toxics Cleanup Program database (Ecology database) for the Site, but found no listings. Regulatory files for the Site were not reviewed due to the time and/or cost constraints of this Phase I ESA. Based on the information provided by EDR and the current regulatory status of the Site, this listing does not represent a recognized environmental condition in connection with the Site.

6.2 ADJACENT AND OTHER FACILITY LISTINGS

Reported facilities within 0.25 mile up-gradient, 0.125 mile cross-gradient, or adjacent down-gradient of the Site are considered to have a potential to have impacted the Site. Facilities that were listed in the EDR report but not identified as a reported facility (e.g., a facility listed as a hazardous waste generator but not as having had a release) and facilities that were listed as "Closed" were not considered to have a potential to have impacted the Site.

- **American Linen Supply Company**, east-adjacent to the Site at 701 Dexter Avenue North, was identified in the State of Washington's CSCSL, VCP, ALLSITES and MANIFESTS databases. According to the EDR report, the contaminants of concern at the facility include chlorinated volatile organic compounds, which include tetrachloroethylene, trichloroethene, dichloroethene, and vinyl chloride. Other

contaminants include gasoline, diesel, and oil range petroleum hydrocarbons and benzene, toluene, ethylbenzene, and xylenes. Contamination is present in the soil and in groundwater beneath the property. The facility was a refueling facility that included multiple USTs containing petroleum fuel. Between 1947 and 1966, an automotive repair shop also was located at the property. Dry cleaning operations related to American Linen Supply Company began at the property in 1966 and operated through the mid-1990s. From the mid-1990s through 2012, buildings on the property were occupied by businesses that included automotive repair, a bakery, and a car rental office. The property building was demolished in 2013 in preparation for redevelopment of the lot. Farallon has actual knowledge regarding the east-adjacent property, including the known chlorinated solvent groundwater plume in the vicinity that originated from this property due to historical operations. Contaminants of concern at the property consist of chlorinated volatile organic compounds, including tetrachloroethene, trichloroethene, dichloroethene, and vinyl chloride. Other contaminants include gasoline-, diesel-, and oil-range petroleum hydrocarbons; and benzene, toluene, ethylbenzene, and xylenes. Contamination is confirmed in soil and in groundwater beneath the property. The plume extends beyond the property boundary; however, the plume boundaries have not been fully defined. The potential migration of hazardous substances from the east-adjacent property to the Site represents a recognized environmental condition in connection with the Site.

- **Auto Service Europa/Complete Automotive**, north-adjacent to the Site at 717 Dexter Avenue North, was identified in the State of Washington's CSC&D NFA, VCP, ALLSITES and UST databases, as well as RCRA NonGen/NLR and FINDS databases. The facility historically was an auto repair shop from at least 1986 to 2006. The listing is related to soil contamination from a 1000-gallon diesel fuel UST. Remedial actions between 2008 and 2011 led to Ecology issuance of a "No Further Action" determination for the facility on October 10, 2012. Based on the information provided in the EDR report and its current regulatory status, this facility does not represent a recognized environmental condition in connection with the Site.

Farallon did not review regulatory files for the Site or facilities proximate to the Site due to the time and/or cost constraints of this Phase I ESA; additional information may be available at Ecology.

6.3 HISTORICAL AUTO STATIONS

Reported historical auto and gasoline stations within 250 feet of the Site are considered to have a potential to have impacted the Site. The EDR report identified three historical auto and gasoline stations within 250 feet of the Site and at an equal or higher elevation. 717 and 715 Dexter Avenue North, north-adjacent to the Site, were listed as auto repair facilities from 1986 to 2007. As presented above, 717 Dexter Avenue North was issued a "No Further Action" determination by Ecology on October 10, 2012. According to the EDR report, no violations or spills have been reported for 715 Dexter Avenue North. 722 Dexter Avenue North, approximately 59 feet north

of the Site, was listed as an auto repair facility from 1935 to 1960. No violations or spills have been reported for 722 Dexter Avenue North. Farallon searched the Ecology database for 715 and 722 Dexter Avenue North, but found no records. In addition, 717 and 715 Dexter Avenue North have been redeveloped into residential and commercial office uses, respectively. Based on the information provided in the EDR report and their current regulatory status, these facilities do not represent a recognized environmental condition in connection with the Site.

6.4 HISTORICAL DRY CLEANERS

The EDR report did not identify any historical dry cleaner facilities within 250 feet of the Site and at equal or higher elevations. As presented above, based on historical sources reviewed and Farallon's actual knowledge of the east-adjacent property, dry cleaning operations related to American Linen Supply Company were conducted at 700 Dexter Avenue North.

6.5 UNMAPPABLE LISTINGS

EDR identified 15 facilities as "orphan sites," which EDR was unable to map due to inaccurate or inadequate address information. Farallon located these orphan sites according to the addresses provided by EDR. The orphan sites are not located within the respective search radii and, therefore, do not represent a recognized environmental condition in connection with the Site.

7.0 INTERVIEWS

Farallon conducted interviews with individuals familiar with the Site and contacted relevant local governmental agencies to obtain additional Site information. The responses from the parties contacted are provided below.

7.1 INTERVIEW WITH SITE REPRESENTATIVE

During the site reconnaissance, Farallon interviewed Ms. Kari Lund, building manager and a representative of the owner of the Site, on July 20, 2015. The following information was obtained from this interview:

- No known ASTs or USTs are present on the Site.
- Hazardous materials are present on the Site in the form of typical janitorial cleaning supplies and photocopier/printing toner.
- Utilities are provided by the local municipality. Electricity is provided by Seattle City Light and natural gas service is provided by Puget Sound Energy.
- There have been no reportable spills or releases on the Site.

Ms. Lund, stated that she had not been made aware of any pending, threatened, or past:

- Litigation relevant to hazardous substances or petroleum products in, on, or from the Site;
- Administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Site; or
- Notices from a governmental entity regarding violations of environmental laws or liability relating to hazardous substances or petroleum products.

7.2 INTERVIEW WITH FIRE DEPARTMENT

Farallon contacted the Seattle Fire Department on July 21, 2015 regarding previous and current ASTs and USTs at the Site. No response was received prior to the completion of this report.

7.3 INTERVIEW WITH CITY

Farallon contacted the City of Seattle on July 21, 2015 to inquire whether notices of violations and/or reported hazardous spills at the Site were on file, and regarding previous and current ASTs and USTs at the Site. No response was received prior to the completion of this report.

8.0 SITE RECONNAISSANCE

Farallon conducted a site reconnaissance on July 20, 2015 to observe the Site for physical evidence of recognized environmental conditions. The methodology used for the site reconnaissance and the observations made during the reconnaissance are discussed below. A description of the Site is provided in Section 2.2, Site Description. Photographs taken during the site reconnaissance are presented in Appendix B.

8.1 SITE RECONNAISSANCE METHODOLOGY

Farallon completed a walk around the entire perimeter of the Site and inspected accessible areas of the Site. There were no deviations from ASTM E1527-13. Limiting conditions encountered during the completion of the Phase I ESA included the presence of vehicles parked on the two-level parking structure on lower levels of the Site that prevented Farallon from observing the entire ground surface of the Site, and furniture and equipment in the Site building that prevented Farallon from observing the entire interior floor surface. Based on information obtained from the Site representative, these limiting conditions are not expected to hinder the conclusions of this report.

8.2 SITE RECONNAISSANCE OBSERVATIONS

Weather conditions at the time of the reconnaissance were sunny, with a temperature of approximately 75 degrees Fahrenheit. There were no weather-related Site-access restrictions encountered during the reconnaissance.

The Site includes King County Tax Parcel No. 224900-0245, which totals approximately 27,127 square feet or 0.62 acre of land. The Site is a six-story reinforced concrete structure with parking on the first two levels of the building that comprises approximately 61,800 square feet of commercial space, built in 1984. The Site building currently is occupied by 15 tenants for commercial office use. Access to the Site is gained from Dexter Avenue North, east of the Site, and Aurora Avenue North, west of the Site.

8.2.1 Interior Observations

Farallon's observations of the interior of the Site building during the site reconnaissance are documented in the table below. Comments pertaining to notable interior observations follow in Section 8.2.2. Photographs taken during the site reconnaissance are provided in Appendix B.

INTERIOR OBSERVATIONS	YES	NO
Odor		X
Heating/Cooling System	X	
Drain(s) and/or Sump(s)	X	

INTERIOR OBSERVATIONS	YES	NO
Staining and/or Corrosion	X	
Storage Tank(s), Vent Pipe(s), Fuel Port(s), and/or Fill Pipes		X
Clarifier(s)		X
Discharge Area		X
Drum(s) and/or Other Container(s)		X
Pool(s) of Liquid		X
Automobile Lift(s)		X
Monitoring Well(s)		X
Hazardous Material(s) and/or Petroleum Product(s)	X	
Hazardous Waste	X	

8.2.2 Interior Observation Comments

Drain(s) and/or Sump(s)

Stormwater catch basins are located on each of the two levels of parking at the Site. The catch basins are connected and discharge to the City of Seattle stormwater system.

Staining and/or Corrosion

Farallon observed de minimis petroleum staining throughout both levels of parking at the Site that appeared to be from parked vehicles on the Site.

Heating/Cooling System

During the site reconnaissance, Farallon observed a heating, ventilating, and cooling (HVAC) system located on the roof of the Site building. The HVAC system is powered by electricity. No staining or evidence of releases was observed in or around the HVAC system at the time of the reconnaissance.

Hazardous Material(s) and/or Petroleum Product(s)

Farallon observed minor amounts of hazardous substances, including janitorial cleaning supplies and photocopier/printing toner, throughout the tenant suites. The materials were observed to be properly labeled and stored in designated areas of the building. No staining or evidence of releases was observed in or around the containers at the time of the reconnaissance.

Hazardous Waste

As presented above, Farallon observed minor amounts of hazardous substances, including photocopier/printing toner. According to the Site representative, used toner cartridges are recycled by tenants or by an outside contractor.

8.2.3 Exterior Observations

Farallon's observations of the exterior of the Site during the reconnaissance are documented in the table below. Comments pertaining to notable exterior observations follow in Section 8.2.4. Photographs taken during the reconnaissance are provided in Appendix B.

EXTERIOR OBSERVATIONS	YES	NO
Odor		X
Staining and/or Corrosion		X
Storage Tank(s), Vent Pipe(s), and/or Fuel Port(s)		X
Drum(s) and/or Other Container(s)		X
Pool(s) of Liquid		X
Hazardous Material(s) and/or Petroleum Product(s)		X
Hazardous Waste		X
Pit(s), Pond(s), and/or Lagoon(s)		X
Stressed Vegetation		X
Solid (Non-Hazardous) Waste—Evidence of Dumping		X
Wastewater		X
Domestic Water	X	
Water Well(s)		X
Septic/Sewer System	X	
Stormwater	X	
Transformer(s)	X	
Significant Amount of Fill Material		X

8.2.4 Exterior Observation Comments

Domestic Water

Domestic water is supplied to the Site building by the City of Seattle.

Septic/Sewer System

The Site is connected to the municipal sanitary sewer system.

Stormwater

Stormwater on the Site is directed either into curb-side catch basins on streets adjacent to the Site or through rooftop gutters and is discharged to the City of Seattle stormwater system.

Transformer(s)

Farallon observed an electrical transformer room on the lower parking level. According to the Site representative, the electrical transformer room is owned and maintained by the property owners. No staining or evidence of releases was observed in or around the electrical transformer room.

9.0 FINDINGS AND OPINIONS

Farallon observed de minimis petroleum staining throughout both levels of parking at the Site that appeared to be from parked vehicles on the Site.

The American Linen Supply Company, east-adjacent to the Site at 701 Dexter Avenue North, was identified in the State of Washington's CSCSL, VCP, ALLSITES and MANIFESTS databases. According to the EDR report, the contaminants of concern at the facility include chlorinated volatile organic compounds, which include tetrachloroethylene, trichloroethene, dichloroethene, and vinyl chloride. Other contaminants include gasoline, diesel, and oil range petroleum hydrocarbons and benzene, toluene, ethylbenzene, and xylenes. Contamination is present in the soil and in groundwater beneath the property. The facility was a refueling facility that included multiple USTs containing petroleum fuel. Between 1947 and 1966, an automotive repair shop also was located at the property. Dry cleaning operations related to American Linen Supply Company began at the property in 1966 and operated through the mid-1990s. From the mid-1990s through 2012, buildings on the property were occupied by businesses that included automotive repair, a bakery, and a car rental office. The property building was demolished in 2013 in preparation for redevelopment of the lot. Farallon has actual knowledge regarding the east-adjacent property, including the known chlorinated solvent groundwater plume in the vicinity that originated from this property due to historical operations. Contamination is confirmed in soil and in groundwater beneath the property. The plume extends beyond the property boundary; however, the plume boundaries have not been fully defined. The potential migration of hazardous substances from the east-adjacent property to the Site represents a recognized environmental condition in connection with the Site.

10.0 CONCLUSIONS

Farallon conducted a Phase I ESA for the property at 701 Dexter Avenue North in Seattle, Washington in conformance with the scope and limitations of ASTM E1527-13. Any exceptions to or deletions from this practice are described in Section 1.5, Deviations.

The results of this assessment identified the potential migration of hazardous substances from the east-adjacent property at 700 Dexter Avenue North to the Site as a recognized environmental condition in connection with the Site.

At the request of Unico, Farallon has included recommendations for the Site that are beyond the scope of ASTM E1527-13. According to recent soil and groundwater data available for the 700 Dexter Avenue North property and the topographic location of this property relative to the Site, the chlorinated solvent groundwater plume likely does not extend up-gradient beyond the west side of Dexter Avenue North, east of the Site. In addition, the first two levels of the Site building, which are aboveground, include paved parking areas; therefore, the potential for vapor intrusion into occupied areas of the Site building is highly unlikely. Based on information obtained during completion of the Phase I ESA, additional investigation of the Site is not warranted at this time. In the event the Site is redeveloped and soil is excavated and/or groundwater is encountered during construction activities, the Site should be evaluated for the potential migration of hazardous substances from the east-adjacent 700 Dexter Avenue North property.

12.0 STATEMENT OF LIMITATIONS

The conclusions and recommendations contained in this report/assessment are based on professional opinions with regard to the subject matter. These opinions have been arrived at in accordance with currently accepted hydrogeologic and engineering standards and practices applicable to this location, and are subject to the following inherent limitations:

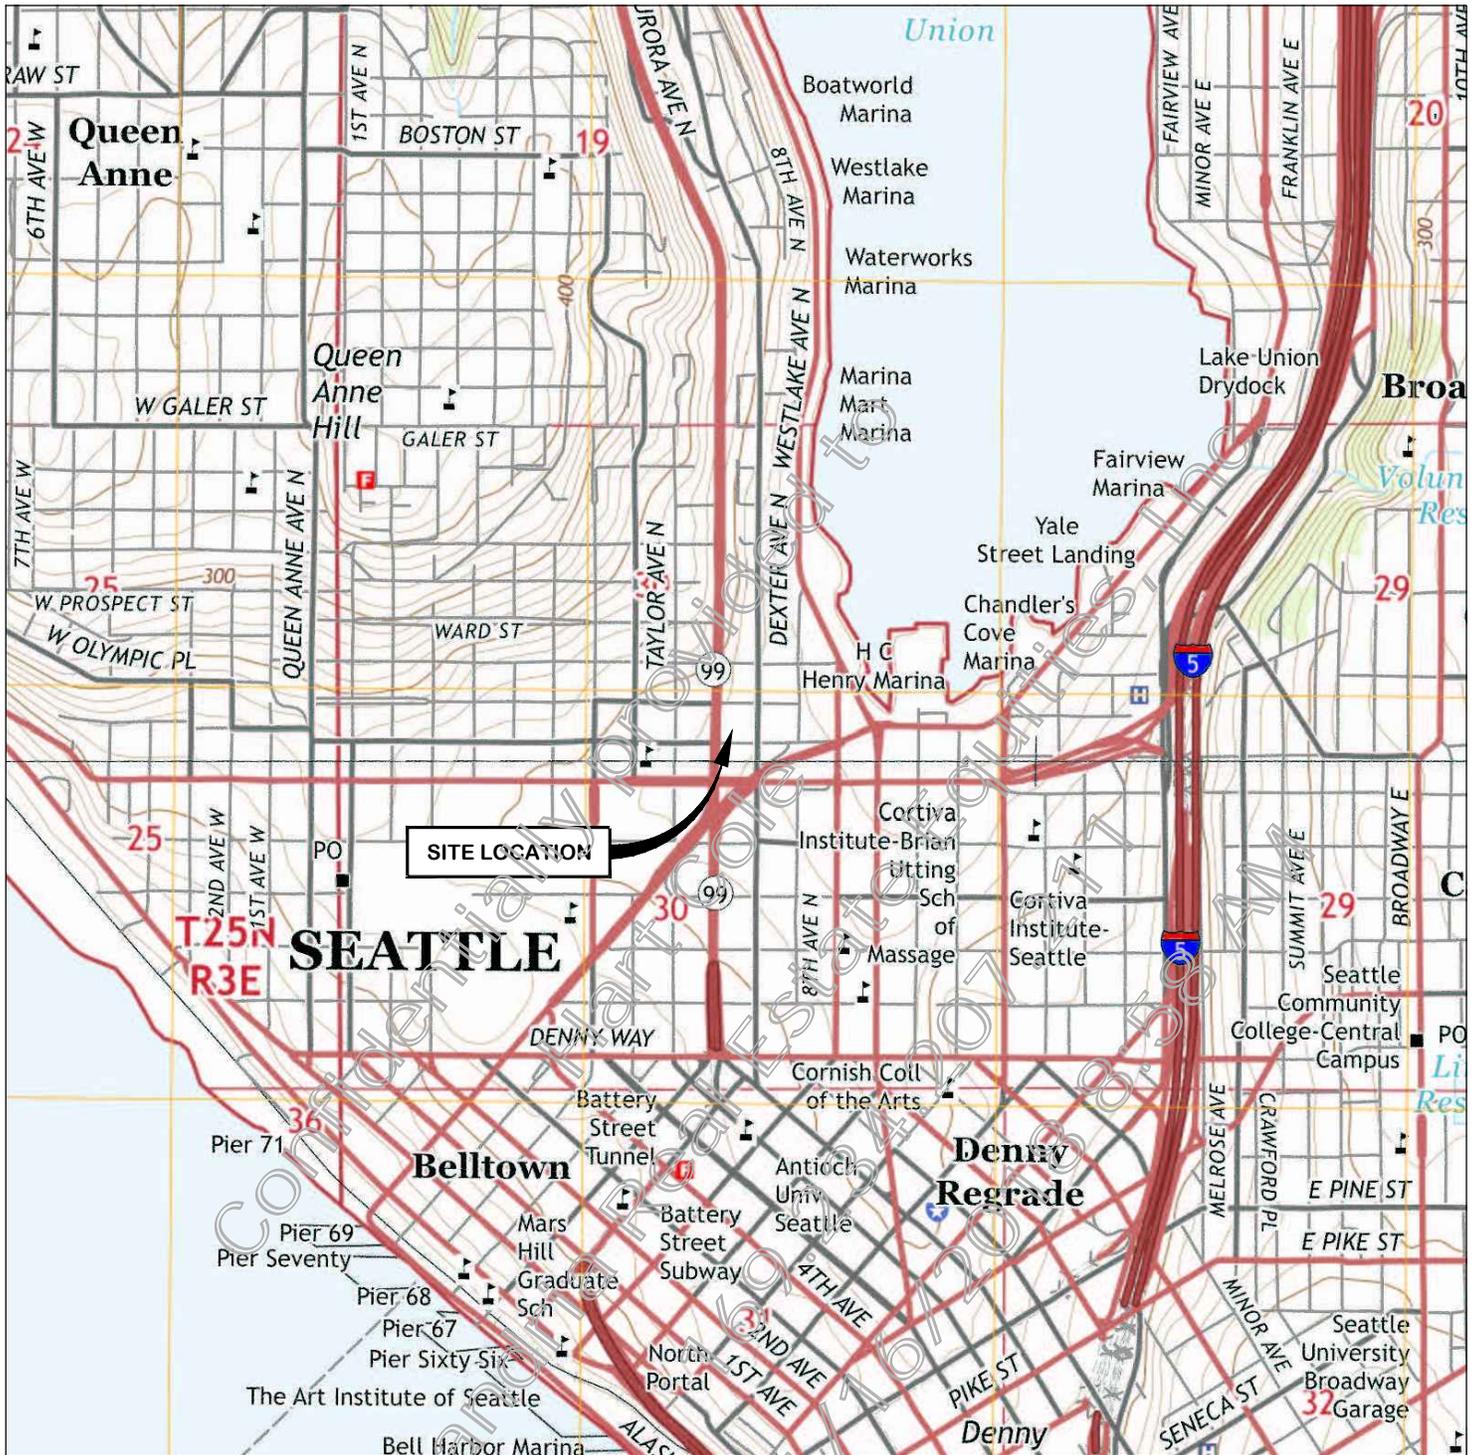

- **Accuracy of Information.** Certain information reviewed and evaluated by Farallon as part of this Phase I ESA was obtained from various sources believed to be reliable, including the previously discussed interviewed parties. Although Farallon's conclusions, opinions, and recommendations are based in part on such information, Farallon's services did not include verification of its accuracy or authenticity. Should such information prove to be inaccurate or unreliable, Farallon reserves the right to amend or revise its conclusions, opinions, and/or recommendations.
- **Reconnaissance.** Farallon conducted a reconnaissance of the Site that is the subject of this report/assessment to document current conditions. Farallon focused on areas deemed more likely to exhibit hazardous substance or conditions, while other areas received limited attention, or were inaccessible at the time of the reconnaissance.
- **Limitations.** Because Farallon's report is based on information, the accuracy of which has not been determined, and because Farallon's observations made during the site reconnaissance are limited, Farallon cannot and does not guarantee that the Site is free of hazardous or potentially hazardous substances or conditions, or that latent or undiscovered conditions will not become evident in the future. Because Site activities beyond Farallon's control could change at any time after the completion of this report/assessment, Farallon's observations, findings, and opinions can be considered valid only as of the date of the report hereof. This report/assessment has been prepared in accordance with the client contract and currently accepted industry standards, and no other warranties, representations, or certifications are made. Unless stated otherwise herein, this report is intended for and restricted to the sole use of Unico Properties LLC. Any use, interpretation, or reliance upon this report/assessment by anyone other than Unico Properties LLC is at the sole risk of that party, and Farallon will have no liability for such unauthorized use, interpretation, or reliance.

Total Sq. Ft. of Buildings: 61,000 Date(s) of Renovation(s)/Phases: 1989

Does Site have an undeveloped area equal to 1 acre or more? Yes No

Are any bodies of water on or immediately adjacent to the Site? Yes No If Yes, describe:

Comments:

Potable water source at Site? On-Site well Utility (Specify provider)

Wastewater discharge at Site? Septic Tank/Drainfield Sanitary Sewer Other (Specify):

Building plans available at the Site? Yes No Unknown Already provided

■ OWNERS

Current Owner(s): 701 Aurora Joint Venture

Previous Owner(s):

■ OCCUPANTS/TENANTS

Current Occupant(s)/Tenant(s) and operations:

Gray & Osborne
 Muscular Distrophy District
 Guy F. Atkinson Construction, LLC
 OAC Services
 Travel and Transport
 White Thompson & Co
 Horace C. Francis
 Intrafish Media
 Silkworth, Gennill, Khin
 KOM Consulting, PLLC

Previous Occupant(s)/Tenant(s) and operations:

■ PREVIOUS PROPERTY USES

Describe previous use(s) of the Site:
 Residences, a restaurant, and businesses

■ PREVIOUS INVESTIGATIONS

Has any previous environmental investigation been conducted at Site? Yes No Unknown

If Yes, note type and describe: Phase I ESA Asbestos Lead Paint Lead in Water
 Radon Wetlands Indoor Air UST/AST Other (Specify type below)

Comments:

■ ON-SITE ENVIRONMENTAL CONDITIONS

Are you aware of any of the following environmental conditions at the Site, either current or former?

Environmental Condition/Issue	Response	Comment if Yes Response
Aboveground Storage Tank	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Underground Storage Tank	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Hazardous/Toxic Substance	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Stored Chemical	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	

Chemical Spill/Release	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Dump Area/Landfill	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Waste Treatment System	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Wastewater Discharge	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

(1) Environmental cleanup liens that have been filed or recorded against the Site (Part 312.25 of Title 40 of the Code of Federal Regulations [40 CFR 312.25])

Are you aware of any environmental cleanup liens against the Site that have been filed or recorded under federal, tribal, state, or local law?

no

(2) Activity and land use limitations that are in place at the Site or that have been filed or recorded in a registry (40 CFR 312.26)

Are you aware of any activity and land use limitation (such as engineering controls, land use restrictions, or institutional controls) that are in place at the Site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?

no

(3) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28)

As the user of the Phase I ESA Report, do you have any specialized knowledge or experience related to the Site or nearby properties? For example, are you involved in the same line of business as the current or former occupant(s) of the Site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

no

(4) Relationship of the purchase price to the fair market value of the Site if it were not contaminated (40 CFR 312.29)

Does the purchase price being paid for this Site reasonably reflect the fair market value of the Site? If you conclude that there is a difference between the purchase price and the fair market value, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Site?

no

(5) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30)

Are you aware of commonly known or reasonably ascertainable information about the Site that would help Farallon Consulting, L.L.C. to identify conditions indicative of a chemical or other release or threatened release? For example, as user of the Phase I ESA Report:

Do you know the past use(s) of the Site? (If yes, please specify.)

no

Do you know of a specific chemical(s) present at the Site, or present at one time? (If yes, please specify.)

no

Do you know of a chemical and/or other spill(s) or release(s) that have taken place at the Site? (If yes, please specify.)

no

Do you know of any environmental cleanup(s) that have taken place at the Site? (If yes, please specify.)

no

(6) The degree of obviousness of the presence or likely presence of contamination at the Site, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)

As the user of the Phase I ESA Report, based on your knowledge and experience related to the Site, is there any obvious indicator(s) that point to the presence or likely presence of contamination at the Site? (If yes, please specify.)

no

Identify all parties who will rely on the Phase I ESA Report, including:

Name of Business: Unico Properties

Name of Contact: Aaron McGinley

Address: 1215 4th Avenue, Suite 600, Seattle, WA

Telephone Number: 206-628-6918

E-mail Address: aaronm@unicoprop.com

Has any party that will rely on the Phase I ESA Report required services beyond the standard ASTM E1527-13? (For example, an asbestos, lead-based paint, lead in drinking water, or wetlands investigation) (If yes, please specify)

no

Who is the Site contact, and how can the contact be reached?

Name of Business: Sebco

Name of Contact: Jay Blasingame

Address:

Telephone Number: 206-323-9507

E-mail Address: jayb@sebcoinc.com

Are there any special terms and conditions that must be agreed upon by Farallon Consulting, L.L.C.?
(If yes, please specify.)

no

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed

EXECUTIVE SUMMARY

and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 2 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/10/2015 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>Not reported</i>	<i>601 WESTLAKE AVE N</i>	<i>ESE 1/8 - 1/4 (0.222 mi.)</i>	<i>AD131</i>	<i>426</i>

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/10/2015 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are

EXECUTIVE SUMMARY

2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 04/20/2015 has revealed that there are 110 WA CSCSL sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

WA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Ecology's Statewide UST Site/Tank Report.

A review of the WA UST list, as provided by EDR, and dated 05/27/2015 has revealed that there are 21 WA UST sites within approximately 0.25 miles of the target property.

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 04/20/2015 has revealed that there are 23 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/10/2015 has revealed that there are 34 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EXECUTIVE SUMMARY

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
WASHINGTON NATURAL G	815 MERCER ST	SE 1/8 - 1/4 (0.127 mi.)	N58	282

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 61 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 21 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCD B (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No
 Mixed waste (haz. and radioactive): No
 Recycler of hazardous waste: No
 Transporter of hazardous waste: No
 Treater, storer or disposer of HW: No
 Underground injection activity: No
 On-site burner exemption: No
 Furnace exemption: No
 Used oil fuel burner: No
 Used oil processor: No
 User oil refiner: No
 Used oil fuel marketer to burner: No
 Used oil Specification marketer: No
 Used oil transfer facility: No
 Used oil transporter: No

. Waste code: D001
 . Waste name: IGNITABLE WASTE

Historical Generators:

Date form received by agency: 12/31/2003
 Site name: SEATTLE AUTO CENTER
 Classification: Not a generator, verified

Violation Status: No violations found

Evaluation Action Summary:

Evaluation date: 01/25/2000
 Evaluation: FOCUSED COMPLIANCE INSPECTION
 Area of violation: Not reported
 Date achieved compliance: Not reported
 Evaluation lead agency: State

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Owner/Op start date: 12/31/2003
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington

MAP FINDINGS

(Continued)

1005445263

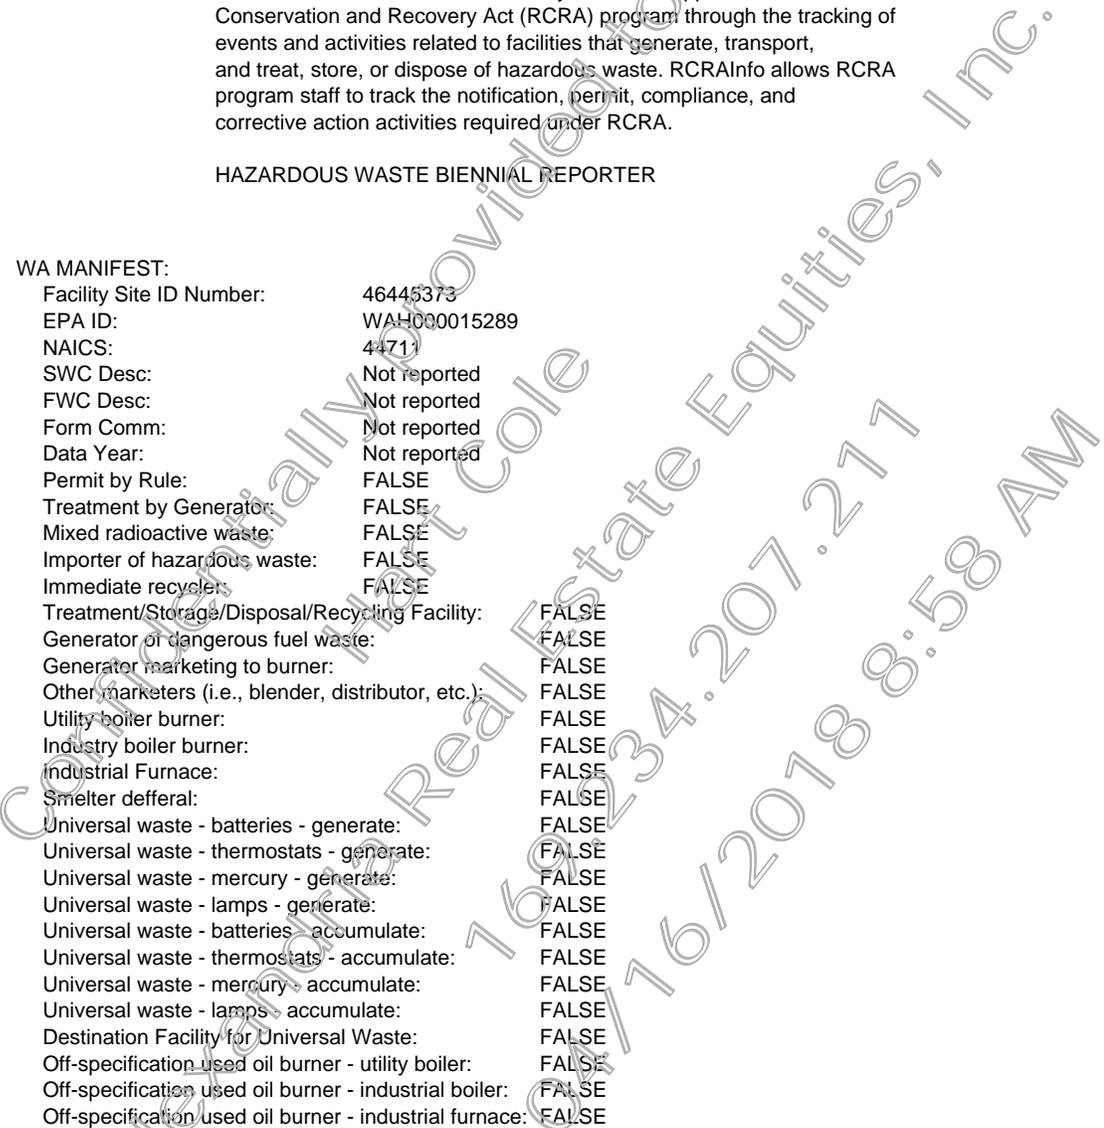

Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

WA MANIFEST:

Facility Site ID Number: 46445373
EPA ID: WAH000015289
NAICS: 44711
SWC Desc: Not reported
FWC Desc: Not reported
