SIGNATURE AND ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1. SUMMARY OF CONCLUSIONS

Ramboll US Corporation (Ramboll)¹ was retained by ARE-Seattle No. 30, LLC (ARE) to perform a Phase I Environmental Site Assessment (ESA) of the property located at 701 Dexter Avenue North in Seattle, Washington (herein referred to as the “facility” or the “site”). Ramboll’s assessment was conducted in connection with a potential purchase of the site. The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International’s *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the “ASTM Standard”), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 2.1).

In addition to the Phase I ESA scope of work, Ramboll conducted a limited Phase II subsurface investigation including the collection of soil, soil vapor, and groundwater samples at the site to evaluate subsurface soils for disposal purposes and potential migration of impacted groundwater or soil vapor onto the site from adjacent or up-gradient properties. Findings are incorporated into this report, and the details of the investigation are presented in Section 6.

1.1 Site Summary

701 Dexter Investments, LLC, a subsidiary of Unico Properties, LLC, owns and leases commercial office space in Seattle, Washington. The 0.62-acre site is improved with one 58,681-square-foot building. The site was used for residential purposes since at least the 1890s to at least the 1920s. The site was used as a restaurant from at least the 1930s to the 1980s. The current commercial tenant building was constructed in 1984. Numerous commercial companies have leased portions of the commercial building including Gray and Osborne, Inc. Consulting Engineers, Francis and Company LLC, and Thomas Hart Advertising between at least 1986 and 2013. The current owner, 701 Dexter Investments, LLC, a subsidiary of Unico Properties, LLC, acquired the site in 2015 and leases the building to Gray & Osborne (engineering consultants), OAC Services, Inc. (forensic architecture and engineering firm), Horace C. Francis (accounting firm), and KOM Consulting (state and local tax advisors).

1.2 Recognized Environmental Conditions

Ramboll performed a Phase I ESA of the site at 701 Dexter Avenue North in Seattle, Washington in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no RECs in connection with the site.

1.3 2018 Site Investigation

Ramboll conducted a limited subsurface investigation at the site in May 2018. The investigation included the collection of soil, groundwater, and/or soil vapor samples from approximately 10 locations to evaluate subsurface soils for disposal purposes and potential migration of impacted groundwater or soil vapor onto the site from adjacent or up-gradient properties. The investigation identified the presence of heavy range petroleum hydrocarbons and metals in soil; chloroform in groundwater; and several volatile organic compounds (VOCs) in shallow and deep soil vapor. When compared to relevant Washington Department

¹ Ramboll was previously known as Ramboll Environ US Corporation and ENVIRON International Corporation.

of Ecology (Ecology) Model Toxics Control Act (MTCA) criteria, results of the limited investigation did not identify significant impacts beneath the site in soil, groundwater or soil vapor.

Detected analyte concentrations in soil did not exceed Ecology's MTCA criteria.

In groundwater, one analyte (chloroform) was detected slightly above MTCA criteria at the presumed upgradient site boundary (west). A source for the chloroform detection has not been identified on the site, and it does not appear to be the result of impacts from the neighboring dry cleaner site to the east. Due to the nature of this grab groundwater sample (i.e., from temporary probe, not a developed well), this result is likely biased high, and does not represent a significant concern.

The majority of soil vapor detections are below or only slightly exceed the MTCA criteria. Based on available soil vapor results, it is likely that redevelopment activities (including soil removal and the installation of a sealed concrete parking structure with typical venting and air exchange rates associated with parking garages) may be sufficient to mitigate potential vapor intrusion risks for future building occupants.

1.4 Other Findings

Although not considered to be RECs based on currently available information, Ramboll identified the following other findings. The term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Potential Impact from Off-Site Properties.** The site is located adjacent to and in the presumed downgradient direction from several off-site properties listed with open status on databases indicative of potential soil or groundwater contamination. Specifically, in July 1989, benzene, non-halogenated organics, petroleum diesel, and petroleum gasoline were discovered in soil and groundwater at 700 Dexter Avenue North (700 Dexter property), located adjacent to the east of the site. The impacts were attributed to releases from a refueling facility that operated between 1930 and 1966 and an automotive repair shop that operated between 1947 and 1966. In August 1993, chlorinated volatile organic compounds (CVOCs) were discovered in soil and groundwater at 700 Dexter Avenue North. The CVOC impacts were attributed to releases from dry cleaning operations that occurred between 1966 and the mid-1990s on the 700 Dexter property. From the mid-1990s through 2012, buildings on 700 Dexter property were occupied by businesses that included automotive repair, a bakery, and a car rental office. The property was vacant in 2013 in preparation for demolition of the existing structures and redevelopment of the lot. In March 2013, five underground storage tanks (USTs) were removed from the 700 Dexter property. Mercury and petroleum-impacted soil was discovered upon the removal of the USTs and the impacted soil was excavated from 700 Dexter Avenue North. In April 2013, an electrical resistivity heating and soil vapor extraction (ERH/SVE) system was installed to remediate CVOCs in soil and groundwater beneath the 700 Dexter property. An estimated 12,000 pounds of CVOCs (reportedly, representing approximately 98 percent of the original CVOC mass from soil and groundwater) was removed by November 2013. The ERH/SVE system was shut down in December 2013. Various feasibility studies and pilot tests occurred between 2013 and 2017 to evaluate the next stage of remediation. In January 2018, injection of edible oil substrate was conducted to remediate low concentrations of CVOCs remaining at 700

Dexter property. Groundwater flows generally to the east, and the depth to impacted groundwater is approximately 30 feet below ground surface (bgs) in the west portion of 700 Dexter property. Cleanup is still in progress.

In addition, there are a number of properties with identified impacts to soil and/or groundwater for constituents, including gasoline and petroleum products, located upgradient between approximately 490 and 1,100 feet west of the site, that have not received regulatory closure. Based on the available information in Washington Department of Ecology's (Ecology's) Toxics Cleanup Program Web Reporting, there is no information as to whether contamination from the noted properties is migrating to the site. If contamination associated with off-site properties is found to have migrated onto the subject site, it is expected that any remedial activities would be the responsibility of the entity(ies) named in the listing or other designated responsible party and not 701 Dexter Investments, LLC in accordance with Washington State law.

The risk of widespread contamination as the result of migration from an adjacent or upgradient property is mitigated by the results of the limited 2018 site investigation that did not identify significant or widespread impacts in soil, groundwater, or soil vapor at the site. Future construction of a subsurface parking garage may also minimize the potential for vapor intrusion.

- **Past Operations at the Site.** The site was previously used for residential purposes from at least the 1890s through the 1930s. During this time period, a few scattered residences and associated outbuildings were present on the site, and it is possible that aboveground or underground fuel oil tanks may have been used for heating purposes. Absent further information regarding the specific nature of historical chemical use, chemical handling practices, and associated wastes, Ramboll cannot rule out the possibility that spills or releases of chemicals or petroleum products may have occurred and adversely affected the soil and groundwater conditions at the site. However, the risk of widespread contamination is mitigated by several factors: results of the limited 2018 site investigation did not identify significant or widespread impacts, no visual or olfactory evidence of contamination (e.g., stained soil or odors) was observed, facility personnel are not aware of any major spills or releases at the site, there are no floor drains in chemical storage areas, there are no other obvious pathways to the subsurface, and that operations conducted since the 1980s are not chemically intensive and are unlikely to have caused a release.

1.5 Non-Scope Considerations

Ramboll identified the following findings that relate to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials.** The building was constructed after asbestos was generally phased out of use in most building material applications in the early 1980s; thus, none of the building materials at the site are considered presumed asbestos containing material (PACM). In June 2017, a Limited Hazardous Materials Survey was conducted at the site by NVL Laboratories, Inc. (NVL). The survey included the collection and analysis by of approximately 217 samples throughout the building including tile flooring, mastic, ceiling panels, caulking, sink undercoats, laminate, drywall, joint compound, sealant, insulation, carpet padding, fire control room sandy material, insulation board, roofing, roofing tar, exterior insulation and finish system (EIFS) wall

texture, EIFS wall backing, and EIFS wall backing with styrofoam. Only the white undercoat samples collected from sinks in two locations indicated the presence of asbestos above 1 percent. Ramboll has not conducted an independent evaluation to assess the accuracy of the survey and has not confirmed that all materials that may be ACM have been identified. An asbestos Operations and Maintenance Plan (AOMP) should be developed, and prior to redevelopment or demolition activities, all ACMs should be abated by a licensed contractor.

- **Water Intrusion.** Ramboll did not perform a mold survey at the site; however, facility personnel indicated that there have been no previous water intrusion events. During the site visit, Ramboll observed peeling paint and what appeared to be light brown water stained drywall in an approximately 4-inch wide and 4-foot long strip down the wall and an approximately 6 to 7-inch wide 2.5-foot long area along the ceiling in the corner of the stairwell #2 ceiling on the west side of the building. According to facility personnel, they do not know what caused the peeling paint and staining, and they indicated that this was the condition of the area when the building was purchased in 2015. Facility personnel also stated that no new evidence of water intrusion has been observed in this area since at least 2015. Ramboll did not identify obvious visible mold growth in this area during the site visit.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the building in 1984, it is unlikely that lead-based paint was used on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility. However, in June 2017, a Limited Hazardous Materials Survey was conducted at the site by NVL. The survey included the collection and analysis of approximately eleven paint samples from walls, ceilings, and window trims on the 1st and 4th floors, interior stairwells, and interior and exterior piping, walls, columns, and ceilings. Lead-containing paint was identified in samples collected from two locations: blue paint on metal components in an interior stairwell (stairwell #2) and white paint on interior concrete walls and ceilings. Ramboll observed the paint throughout the site to be in good condition, except as noted above in the ceiling of stairwell 2.
- **Radon.** Based on information included in the EDR database report, the site is located in an area categorized as Zone 3, which has average indoor basement radon levels less than 2 picoCuries per liter (pCi/L). The United States Environmental Protection Agency's (USEPA's) continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. Out of 106 sites surveyed in King County, 3% of sites exceeded indoor basement radon levels of 4 pCi/L. The average radon level of a first-floor room within the surveyed sites in King County was 0.334 pCi/L.

2. INTRODUCTION

2.1 Purpose

The purpose of this assessment was to identify RECs, which are defined in the ASTM Standard as:

“The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions.”

2.2 Scope of the Assessment

Ramboll completed the following tasks, consistent with the ASTM Standard, during its Phase I ESA of the property:

- A visit to the site by Amy Kephart of Ramboll on May 30, 2018 and June 1, 2018 to observe the exterior and interior features of the site and to identify the uses and conditions specified in the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during the site visit with the following individuals from Unico Properties, LLC (year of initial hire at the site indicated in parentheses): Addie Calkin, Assistant Property Manager (2016) and Phillip Bing, Chief Engineer Portfolio (2015). The aforementioned individuals are referred to herein as “facility personnel”. The facility personnel interviewed by Ramboll were identified by the Company as having good knowledge of the uses and physical characteristics of the site.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
 - A radius report prepared by EDR, Inc. (EDR, see Appendix B), which presents the results of searches of federal and state databases for the subject site, as well as properties near the subject site. The radius searched for each database, as well as the databases themselves, was selected in accordance with the ASTM Standard.
 - The United States Environmental Protection Agency’s (USEPA’s) EnviroFacts database, which provides site information contained in multiple USEPA regulatory databases.
 - A review of the following databases and maps on the Ecology website: What’s In My Neighborhood, Cleanup Site Search, Toxics Cleanup Program Web Reporting, 2015 Registered UST Listings, Environmental Information Management System (EIM), and Well Reports map.

- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
 - Readily available historical sources, including (where available) historical topographic maps and aerial photographs, city directories, and Sanborn Maps, to develop a history of the previous uses of the site and surrounding area.
 - Historical and site-specific information obtained from the King County Parcel Viewer and King County Department of Assessments websites.
 - An information request to Ecology, the King County Environmental Health Department, City of Seattle Fire Department, and the City of Seattle Building Department.
- A review of physical setting sources, as defined in the ASTM Standard, including:
 - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
 - Geologic, hydrogeologic, or hydrologic sources as provided in the environmental database report and in the previous environmental reports for the site, as listed below.
- A review of documents provided to Ramboll by facility personnel, including site maps, a previous environmental site assessment, and previous geotechnical investigations. In addition, Ramboll was provided with the following previous environmental assessment reports, which are included as Appendix D:
 - Geotechnical Report Proposed Office Building, 701 Dexter Avenue North, Seattle, Washington, prepared by Shannon & Wilson, Inc., dated November 1980;
 - *Phase I Environmental Site Assessment Report*, prepared by Farallon Consulting, L.L.C., dated August 2015 (the “2015 Phase I ESA report”);
 - Environmental Construction Contingency plan for Soil and Groundwater Management, Unico Properties, Inc., 701 Dexter Repositioning Project, Seattle, Washington, prepared by GeoEngineers, dated April 21, 2017; and
 - Geotechnical Engineering Services, 701 Dexter Building Renovation, Seattle, Washington, prepared by GeoEngineers, dated October 19, 2017.
- A search for environmental liens or other activity and use limitations (AULs) for the site, provided by EDR (as shown in Appendix E). Ramboll ordered the lien search using the parcel number believed to be associated with the site, as obtained from the local tax assessor’s office and other online resources.

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and ARE in March 2018. The standard ASTM scope was expanded to include a limited review of asbestos-containing materials, lead-based paint, and radon.

2.3 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- In evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the site are not considered to represent a significant concern to the site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction.

Based on a review of current tenants at the facility and the general similarity in use and construction of the individual tenant spaces, Ramboll determined that it was not necessary to inspect each individual space. Based on a list of tenants and building operations as described by facility personnel, Ramboll selected tenant spaces and areas of the building for visual review based on the potential for that tenant to manage or use hazardous materials above "*de minimis*" amounts (e.g., engineering firm with field equipment and office space). Ramboll has assumed that operations at other current tenant spaces are unlikely to result in the identification of RECs in connection with this review of the property.

2.4 Reliance and General Limitations

This report has been prepared for the exclusive use of ARE and may not be relied upon by any other person or entity without Ramboll's prior express written permission, except as may be otherwise agreed to in the contract between ARE and Ramboll.

The conclusions presented in this report represent Ramboll's best professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. As required by the ASTM Standard, Ramboll evaluated all third-party material to determine its reliability and thoroughness. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Other than as set forth in the contract between Ramboll and ARE, Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media, except as noted in Section 6. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

The scope of work for this assessment did not include an asbestos survey or inspection. According to federal OSHA regulations (29 CFR §1910.1001) and the Model Accreditation Plan (MAP; 40 CFR Part 763, Subpart E, Appendix C), the inspection, testing, evaluation, and/or sampling of suspect asbestos-containing materials must be conducted by an accredited inspector; these activities were not performed as part of this environmental review. Comments in this report regarding the condition of building materials at the site,

including presumed or suspect ACM, represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

Other issues considered outside the scope of the ASTM Standard and this review include lead in drinking water, wetlands, PCBs in building materials, cultural and historic resources, ecological resources, endangered species, and high voltage power lines.

3. SITE DESCRIPTION

3.1 Site Setting

701 Dexter Investments, LLC, a subsidiary of Unico Properties, LLC, owns and leases commercial office space at 701 Dexter Avenue North, Seattle, King County, Washington (the “site” or the “facility”). The approximately 0.62-acre site is located in the South Lake Union neighborhood of downtown Seattle (Figure 1). According to the Assessor’s Office, the assessor’s parcel number (APN) for the site is 224900-0245.

The site is developed with one six-story, 58,681-square-foot, office building. The building footprint covers most of the site, but is located on the east side of the site. The site layout is depicted on Figure 2.

The site is accessed from Dexter Avenue North at the eastern site boundary, Roy Street at the southern site boundary, and Aurora Avenue North at the western site boundary. The site access ramps are paved with concrete. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

Table 1: Physical Setting and Utility Information		
Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map (Seattle North, WA; 2014); Google Earth	Ranges from approximately 59 feet near the northeastern corner to 78 feet near the northwestern corner.
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on-site, with a gentle downward slope to the east/southeast. Regional topography slopes gently downward to the east/northeast toward Lake Union.
Hydrology		
Surface Water Runoff	Visual observations	Percolates into the ground surface at unpaved areas or enters catch basins and roof drains that discharge to the municipal storm sewer system.
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	Lake Union, located approximately 960 feet to the northeast at its nearest point.
Flood Plain	FEMA*; Facility personnel	Facility personnel reported no known occurrences of flooding at the site. The site is not located within a 500-year flood zone.

Table 1: Physical Setting and Utility Information		
Conditions	Source	Description
Wetlands	NWI*; Visual observations	There are no federally-designated wetlands on-site. Ramboll did not identify any obvious suspected wetlands at the site during the site visit.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	2018 700 Dexter Avenue North Interim Action Work Plan	During the most recent groundwater monitoring event on the adjacent property to the east, groundwater flow direction was inferred to be towards the east.
Depth to Groundwater	2018 site investigation; 2018 700 Dexter Avenue North Interim Action Work Plan	During the 2018 site investigation, groundwater beneath the site was encountered along the southern edge of the site at depths of approximately 35 to 38 feet bgs. Groundwater was encountered beneath the east adjacent property (based on monitoring wells installed along Dexter Avenue North close to the site) at depths ranging from approximately 26 feet bgs to 40 feet bgs during the most recent groundwater monitoring event.
On-site Wells	Facility personnel; Visual observations	There are no production, monitoring or injection wells on-site. A monitoring well was observed in Dexter Avenue North near the northeastern corner of the site.
Nearest Groundwater Supply Wells	EDR database report	Three federally registered wells are present within one mile of the site, specifically between one-half mile and one mile south of the site (i.e., crossgradient to the site); none are registered as public supply wells. No private or municipal wells that may be used for water supply are located within one mile of the site.
Nearest Oil or Gas Wells	EDR database report	No oil or gas wells are located on-site or within one mile of the site.
Geologic Conditions	NCSS*, 2018 site investigation	Site soils encountered during the 2018 site investigation were predominantly coarse-grained soils including fine to medium sands and silty sands with varying amounts of gravel and cobbles down to the maximum depth drilled (approximately 40 feet bgs). Fill material (silty fine to coarse sands with varying amounts of gravel and cobbles) was encountered to depths of approximately 20 to 26.5 feet bgs, overlying notably dense native soil. According to the EDR report, regional soils are somewhat excessively drained loamy sands with slow infiltration rates.

Table 1: Physical Setting and Utility Information		
Conditions	Source	Description
Site Utility Information		
Heating and Cooling Equipment	Facility personnel	The building is heated and cooled by a rooftop mounted electrical heating, ventilation, and air conditioning (HVAC) unit.
Electricity Supplier	Facility personnel	Seattle City Light
Natural Gas Supplier	Facility personnel	Puget Sound Energy
Use of Fuel Oil for Building Heat	Facility personnel	No current or former use of fuel oil reported.
Water Supplier	Facility personnel; City website	City of Seattle, which obtains its water from the Cedar and Tolt watersheds.
Sanitary Sewer	Facility personnel	City of Seattle
Septic Systems	Facility personnel	No current or former septic systems reported.
Notes: FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory * - Source was provided in the environmental database report.		

3.2 Current Use of Property

3.2.1 Current Operations

The site is currently leased to four commercial tenants for office and administration operations. Current occupants include Gray & Osborne (engineering consultants), OAC Services, Inc. (forensic architecture and engineering firm), Horace C. Francis (accounting firm), and KOM Consulting (state and local tax advisors).

Occupant	Unit(s)	Square Footage	Floor
Vacant	0100, 0105, 0108	2,928; 3,795; 4,847	1
Gray & Osborne	0101, 0200	3,059 and 14,649	1 (partial) and 2 (entire)

Occupant	Unit(s)	Square Footage	Floor
OAC Services, Inc.	0301	11,582	3
Vacant	0302	3,040	3
Vacant	0400, 0403, 0410, 0415, 0420	3,715; 2,571; 2,037; 1,042; 1,367	4
Horace C. Francis	0404	2,609	4
KOM Consulting	0440	1,502	4

Hazardous wastes are not routinely generated at the site by current tenants, other than the generation of limited amounts of universal wastes (e.g., fluorescent bulbs and batteries). General facility trash and recyclables are collected in dedicated on-site covered dumpsters located in the parking lot on the west side of the building for removal by a commercial solid waste disposal company.

3.3 Current Uses of Adjoining Properties

The site is located in a mixed residential and commercial land use area. The nearest residential area is located adjacent to the north and west of the site. Based on discussions with facility personnel, Ramboll’s visual observations from the site boundary and public rights-of-way, and a limited review of publicly available information, a general determination of the current use of adjacent properties was developed, as described Table 2.

Table 2: Current Use of Adjacent Properties		
Direction	Property/Land Use	Ramboll’s Observations
North	Fulcrum Technologies and commercial office space (to the northwest) and Oakwood Seattle South Lake Union (apartment building to the northeast), beyond which is WRENCH (bicycle repair shop).	No obvious concerns were noted.
East	Dexter Avenue North, beyond which is Dexter Yard or 700 Dexter Avenue North.	Two monitoring wells were observed installed near bike lanes on Dexter Avenue North. The 700 Dexter Avenue North site appears to be a vacant lot. Two 55-gallon steel drums were stored in the northeastern corner of the site.

Table 2: Current Use of Adjacent Properties		
Direction	Property/Land Use	Ramboll's Observations
South	Roy Street, beyond which is Blue Zebra Technologies and a surface parking lot.	No obvious concerns were noted.
West	Aurora Avenue North, beyond which is Downtown Automotive (auto repair shop) and 708 Uptown Apartments.	
Notes: During the site visit, Ramboll walked or drove by the borders of these properties that are adjacent to the site. Ramboll did not enter the neighboring properties.		

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in March 2018 to prepare of summary of listings in federal and state agency databases for the site and facilities within applicable radii of the property, as specified by the ASTM standard.² A copy of the EDR report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by the third-party database provider (see Appendix B) and also conducted searches of databases on Ecology’s website. The site is listed on one environmental database, as discussed in Table 3.

Table 3: Summary of Environmental Database Listings for the Site	
Summary of Information Contained in Database	Ramboll’s Comments
701 Dexter Avenue North is listed on the SPILLS database for a release reported on August 21, 2003. No further information is provided, and the listing does not indicate whether regulatory closure has been granted.	According to records related to this matter provided to Ramboll through a Freedom of Information Act (FOIA) request to Ecology, the SPILLS listed is related to an outside fire that occurred in August 2003. No spill or release of chemicals accorded. As such, this listing does not appear to represent a significant concern to the site.

As detailed above, the subject site is listed on a database (i.e., SPILLS) for which the ASTM Standard specifies that a review of pertinent files or regulatory records be conducted. Ramboll reviewed records regarding this matter obtained from Ecology, which indicated that a release to the subsurface did not occur. No further action was required by the state; therefore, this matter is not considered an environmental concern.

4.1.2 Database Review for Surrounding Properties

There are several listings in the database report for off-site properties within applicable ASTM search radii. Several of these listings (i.e., Resource Conservation and Recovery Act [RCRA] hazardous waste generators, USTs, Historical Auto Stations, compliance listings), by themselves, are not necessarily indicative of a contamination concern and, therefore, are not discussed herein and were not further evaluated for purposes of this assessment. A number of properties appear on databases indicating potential contamination concerns (i.e., Leaking Underground Storage Tank [LUST], Voluntary Cleanup [VCP], Institutional [INST] Control, Brownfield, SPILLS, Drycleaners, Confirmed and Suspected Contaminated Sites List [CSCSL], Underground Injection Wells [UIC], Independent Cleanup Reports [ICR], Hazardous Sites List [HSL]). Of the sites representing a potential environmental concern, Ramboll has discussed in Table 4 below only 1) facilities that are located adjoining to the site; and 2) facilities that

² EDR uses the term “radii” to refer to the ASTM terminology “approximate minimum search distance” in the environmental database report.

are located potentially upgradient of the site and have not been issued regulatory closure for all listings of concern.

Table 4: Summary of Pertinent Database Listings for Off-Site Properties		
Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll's Comments
Listings for Adjoining Sites ¹		
Complete Automotive (Adjoining to the north)	The property is listed in the VCP and CSCSL databases for a release. The matter was granted regulatory closure in October 2012, but no details are provided as to the extent of contamination or remedial actions taken (if any).	According to documents available through Ecology's website, the release was discovered in 2008 during a Phase II ESA. The source was attributed to a 1,000-gallon diesel fuel UST. The UST and approximately 1,600 tons of soil were removed from the site in November 2011. Confirmatory soil samples were collected and no samples exceeded practical quantitation level for heating oil. Ecology granted a no further action (NFA) for this matter on October 10, 2012. Because the matter has been granted regulatory closure by the state agency, it is reasonable to assume that the matter was appropriately evaluated in accordance with regulations in place at the time, and that remaining contamination, if any, is localized and unlikely to migrate at significant levels onto the site. Thus, this closed off-site listing does not appear to represent a significant concern to the site.

Table 4: Summary of Pertinent Database Listings for Off-Site Properties

Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll's Comments
<p>700 Dexter Avenue North/Maryatt Industries (Adjoining to the east)</p>	<p>The property is listed in the CSCSL database with open status (facility ID 3573). The database listing indicates that cleanup has started on the property for impacts to groundwater above cleanup levels by benzene, non-halogenated organics, petroleum diesel, and petroleum gasoline.</p> <p>The property is listed in the UIC database for four underground injection wells ranging from 50 to 95 feet in depth that were installed in January 2018 for aquifer remediation.</p> <p>The property is also listed on the drycleaners database as a drycleaning and laundry services facility in 2012.</p> <p>The property is also listed in the CSCSL database with open status (facility ID 2455). An initial investigation/Federal Primary Assessment was completed in 1993. The database listing indicates that cleanup has started on the property for impacts to groundwater above cleanup levels by halogenated organics, non-halogenated solvents, and petroleum products (not otherwise specified).</p>	<p>According to documents available through Ecology's website, the release was first discovered in 1989 during site characterization activities. The source was attributed to refueling facilities that operated at the property between 1930 and 1966 and dry cleaning operations that occurred at the property between 1966 and the mid-1990s. In 2012, the property was enrolled in the VCP. The cleanup action selected comprises of three parts, 1) excavation of soil to a depth of 10 feet below grade, 2) injection of edible oil substrate, and 3) installation of ERH/SVE system. In April 2013, an ERH/SVE system was installed at the site. In 2015, the property terminated their participation in the VCP and entered into an Agreed Order in 2017. In-situ chemical oxidation injection wells were installed at the site in January 2018. The regulatory status is listed as "Cleanup started." This matter is further discussed in Section 7 of this report.</p>

Table 4: Summary of Pertinent Database Listings for Off-Site Properties		
Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll's Comments
Listings for Non-Adjoining Sites ²		
PCY Corp (601 Sixth Avenue) (approximately 0.1 miles to the southwest)	The PCY Corp property is listed on the CSCSL (facility ID 36533718) and LUST databases for a leak discovered from a gasoline fuel UST in July 1998. According to the database listing, the database listing indicates that cleanup has started on the property for impacts to soil above cleanup levels by petroleum gasoline.	Ramboll submitted a FOIA request to Ecology regarding the CSCSL and LUST listings and is awaiting a reply. This matter is further discussed in Section 7 of this report.
Queens Cleaners (716 Taylor Avenue North) (approximately 0.1 miles west)	The Queens Cleaners property is listed on the Drycleaners database as a "drycleaning plant, except rug cleaning" from 1991 to 1994. No further information is provided.	A listing on this database is not necessarily indicative of concern. The information contained in the EDR report on this listing is insufficient to allow Ramboll to evaluate whether any hazardous materials releases occurred at this property or whether any potential contamination from this property has migrated to off-site areas. This off-site property is unlikely to pose a contamination concern to the site and is not discussed further herein.
Intermark – Queen Anne Property (Roy Street and Taylor Avenue North) (approximately 0.1 miles west)	The Intermark – Queen Anne Property is listed on the ICR database for a petroleum release that occurred in June 1993 that affected soil. No further information is provided.	Ramboll submitted a FOIA request to Ecology regarding the CSCSL and LUST listings and is awaiting a reply. This matter is further discussed in Section 7 of this report.

Table 4: Summary of Pertinent Database Listings for Off-Site Properties

Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll's Comments
707 Taylor Avenue North (approximately 0.1 miles to the west)	The property is listed on the ICR, HSL, CSCSL, and LUST databases with open status (facility ID 24939396). A leak was discovered from a gasoline fuel UST in July 1988. The database listings indicate that cleanup has started on the property for impacts to soil by benzene, non-halogenated organics, and petroleum gasoline.	According to documents available through Ecology's website, the release was first discovered in September 1988 during a site characterization. The suspected source of impacts was gas stations that operated at the property between at least 1941 and 1972. Five USTs and approximately 2,600 cubic yards of soil were removed from the site in August 1992. Gasoline and benzene contaminated soil remains in the southwest corner of the property. Cleanup is still in progress. This matter is further discussed in Section 7 of this report.
City of Seattle (Fifth Avenue North and Mercer Street) (approximately 0.2 miles to the southwest)	The City of Seattle property is listed on the ICR database as having had a release to the soil of petroleum products in 1991. No further information is provided.	Ramboll submitted a FOIA request to Ecology regarding the ICR listing and is awaiting a reply. This matter is further discussed in Section 7 of this report.
520 Fifth Avenue North (approximately 0.2 miles to the southwest)	The property is listed on the CSCSL, LUST, and ICR databases with open status (facility ID 8984). A leak was discovered from a gasoline UST in June 1995. The database listings indicated that cleanup was started in June 1995 on the property for impacts to soil and groundwater by benzene, lead, and petroleum gasoline. Ecology received an Interim Cleanup Report in September 1996.	Ramboll submitted a FOIA request to Ecology regarding the CSCSL, LUST, and ICR listings and is awaiting a reply. This matter is further discussed in Section 7 of this report.

Table 4: Summary of Pertinent Database Listings for Off-Site Properties		
Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll's Comments
420 Mercer Street (approximately 0.2 miles to the southwest)	The property is listed on the CSCSL, LUST, and ICR databases with open status (facility ID 25678675). A leak was discovered from a gasoline UST in July 2011. The database listings indicated that cleanup has started on the property for impacts to soil by benzene and petroleum gasoline.	
<p>Notes:</p> <p>¹ Ramboll's analysis of adjoining properties was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the EDR report. The discussion of adjoining and non-adjoining properties does not include (if applicable) listings for certain databases that are (by themselves) not necessarily indicative of a contamination concern (e.g., compliance listings without indication of a release or chemical mishandling, such as RCRA hazardous waste generators or registered storage tanks). Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are immediately adjacent, even if separated by a road or other physical barrier.</p> <p>² As noted in Table 1, shallow groundwater beneath the site likely flows to the east. Within this section, Ramboll did not discuss any off-site non-adjoining property that is listed on a database indicative of a contamination concern but for which regulatory closure has been issued, as the issuance of regulatory closure suggests that impacts to the subject site from the noted off-site property are unlikely. Finally, Ramboll did not discuss any off-site non-adjoining property that is presumed to be downgradient or cross-gradient of the site. This analysis was based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, but a hazardous material can migrate in the groundwater in a generally downgradient direction; however, the direction of groundwater flow may be affected by localized topographic, hydraulic, and hydrogeologic conditions.</p>		

The EDR report indicates that poor or inadequate address information was available for several properties located in the vicinity of the site; therefore, these properties could not be readily mapped by EDR. Because the location of these properties with respect to the site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the site from these properties. It was beyond the scope of this review to accurately locate each of the unmapped sites identified by EDR; however, Ramboll reviewed the list of unmapped properties and verified that none appeared to be adjacent to the site.

4.2 Historical Uses of the Site and Adjacent Sites

4.2.1 Past Uses of the Site

A summary of Ramboll’s key observations from the available historical sources is presented in Table 5.

The site was used for residential purposes from at least 1893. Two structures were converted to delivery service use in the east portion of the site in approximately 1917. By 1936, all former structures have been removed and one structure identified as a restaurant has been developed on the western portion of the site. The current commercial tenant site structure was developed in 1984. 702 Aurora North Joint Venture acquired the site from Equitable Life Insurance Co in December 1994. 701 Dexter Investments, LLC has owned the site since 2015 and leases the building to various commercial tenants.

Table 5: Summary of Key Observations from Historical Sources for the Subject Site	
Historical Source	Key Observations Regarding Site History
Sanborn Maps (1893, 1905, 1917, 1950 1969)	In the 1893 Sanborn Map, the western portion of the site is occupied by one structure identified as a dwelling, and the southern portion of the site is occupied by two smaller structures. Three additional dwellings and an additional small structure has been developed in the western portion of the site by 1905. In 1917, two of the former dwellings have been converted to flats (residential structures), and the two former small structures have been removed. In addition, a small structure has been developed in the northern portion of the site. In 1950, all former structures have been removed and one structure identified as a restaurant has been developed on the western portion of the site. Minor changes are depicted in the 1969 Sanborn Map, including the eastern portion of the site being identified as a parking area.
Aerial Photographs (1936, 1943, 1953, 1965, 1969, 1977, 1980, 1985, 1990, 2006, 2011, 2015) Satellite Imagery ¹ (1936, 1961, 1968, 1969, 1980, 1990, 1998, 2002, 2003, 2005, 2006, 2007, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017)	On the 1936 through 1980 aerial photographs, one structure is present on the western portion of the site. In the 1985 and subsequent aerial photographs, the site appears in its current configuration, with one large structure and a small paved and landscaped area occupying the entirety of the site.

Table 5: Summary of Key Observations from Historical Sources for the Subject Site	
Historical Source	Key Observations Regarding Site History
Topographic Maps (1894, 1895, 1897, 1908, 1909, 1949, 1968, 1973, 1983, 2014)	Site development on the 1894, 1895, and 1897 topographic maps cannot be discerned due to the quality of the images. The 1908 and 1909 maps depict three small structures on the site. The 1949, 1968, 1973, 1983, and 2014 maps depict the site as being within a general built up urban area, with no depictions of individual structures.
City Directory Abstracts (1920, 1925, 1930, 1935, 1940, 1944, 1951, 1955, 1960, 1966, 1970, 1975, 1980, 1986, 1990, 1996, 2005, 2010, 2014)	The occupants of the site are listed as: residential (1920) and commercial (mid-1980s to mid-2010s) Notable occupants include engineering firms, accounting firms, photography company; consultants; restaurant; construction companies; copying service; advertising, and architects.
King County Department of Assessments websites	The King County Department of Assessments website reports that building permits were issued in 2005 for building remodeling. The building was constructed in 1984. 702 Aurora North Joint Venture acquired the site from Equitable Life Insurance Co in December 1994.
Lien search report	The lien search report indicates that 701 Dexter Investments, LLC acquired the site from 702 Aurora North Joint Venture in November 2015. No liens or activity and use limitations (AULs) are associated with the site.
Notes: ¹ In addition to aerial photographs provided by the third-party provider, Ramboll viewed historical satellite imagery provided via Google Earth. Printed copies were not obtained, and imagery dates were not independently verified.	

4.2.2 Past Uses of Adjacent Properties

The properties in the vicinity of the site have been used for residential and commercial purposes since at least the 1890s and industrial purposes since at least the 1950s. Notable operations on surrounding properties include an auto repair garage (adjacent to the east in the 1950 and 1969 Sanborn Maps), advertising display manufacturing (adjacent to the north in the 1950 Sanborn Map), and electronic supplies and engine repair (adjacent to the north in the 1969 Sanborn Map).

Based on information reviewed on Ecology's website, the east adjacent property (American Linen Co. Dexter Avenue property located at 700 Dexter Avenue North) was a refueling facility in 1930, then used as an automotive repair facility from 1947 to 1966 (as shown in the Sanborn maps), and finally dry cleaning operations from 1966 through the mid-1990s. Uses of the adjacent property after dry cleaning operations included automotive repair, bakery, and a car rental office.

4.3 Review of Local and State Agency Information

Ramboll contacted local governmental agencies and regulatory bodies for information relating to the site. An overview of the findings of this review is presented in Table 6.

Table 6: Local Agency Information for the Site	
Agency Contacted/ Document Reviewed	Information Obtained
King County Parcel Viewer and King County Department of Assessments websites	<p>The King County Department of Assessments website reports that the building is 95,721 gross square feet with 37,040 square feet of the building consisting of parking and 58,681 square feet consisting of a four-story open office. The site is reportedly connected to the public sewer system.</p> <p>According to the King County Parcel Viewer and the King County Department of Assessments websites, the site consists of one parcel (Parcel ID # 224900-0245) and is 0.62 acres. According to the sales history for the parcel, 702 Aurora North Joint Venture acquired the parcel from Equitable Life Insurance Co in December 1994 (Warranty Deed) and 701 Dexter Investments LLC acquired the parcel from 702 Aurora North Joint Venture in November 2015 (Special Warranty Deed).</p>
Department of Ecology State of Washington	An information request was submitted to Ecology. Ecology reported no records on file for the property address.
King County Environmental Health Department	An information request was submitted to the King County Environmental Health Department. A response had not been received at the time of this report.
City of Seattle Fire Department	An information request was submitted to the City of Seattle Fire Department. City of Seattle Fire Department reported no records on file for the property address.
City of Seattle Building Department	An information request was submitted to the City of Seattle Building Department. According to the response provided, a residence was built on the site in 1903, a restaurant was built on the site in 1954, and the current office building was built on the site in 1984. There has been no fire or environmental response actions at the site. The Fire Department also did not have any information regarding USTs at the site.

4.4 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with facility personnel, the following prior environmental assessment, limited environmental sampling, and geotechnical investigations are known to have been conducted at the site.

- **2017 Environmental Construction Contingency Plan for Soil and Groundwater Management (April) and Geotechnical Engineering Services (October).** In 2017, a construction contingency plan for soil and groundwater and a geotechnical engineering study for the site was conducted by GeoEngineers in relation to potential redevelopment of the site. For the environmental construction contingency plan, three soil samples were collected from depths of approximately 7.5 feet bgs in the southwestern corner of the site, and from depths of approximately 7.5 feet and 20 feet bgs in the northeastern corner of the site. The results of this limited sampling identified low level detections of metals, polycyclic aromatic hydrocarbons (reported as total carcinogenic PAHs), and three VOCs (acetone, carbon disulfide, and 2-butanone) in soil. None of these values exceeded Ecology MTCA criteria. GeoEngineers concluded that contaminated soils were not detected at the site, but that soils at the site would be categorized as both “impacted” and “non-regulated” (i.e., for disposal purposes). According to GeoEngineers, “impacted” soils contain metals or VOCs at concentrations that exceed laboratory reporting limits but are less than Ecology’s MTCA criteria or there is physical evidence of contamination such as a visible sheen or odor. “Non-regulated” soils do not contain metals or VOCs at concentrations that exceed laboratory reporting limits and there is no physical evidence of contamination such as a visible sheen or odor. The soil samples were also analyzed for the presence of petroleum hydrocarbons, but none were detected at concentrations exceeding the laboratory reporting limits. Additional geotechnical parameters were assessed and described to provide recommendations for design and redevelopment of the site.
- **2017 Limited Hazardous Materials Survey.** In June 2017, a Limited Hazardous Materials Survey was conducted at the site by NVL. The survey included the collection and analysis by of building material samples for asbestos, lead-based paint, toxicity characteristics leaching procedure (TCLP) for total leachable lead, polychlorinated biphenyls (PCBs), and mercury. The survey included collection of approximately 217 asbestos, eleven lead-based paint, and one TCLP sample. Visual inspections were conducted to identify PCB and mercury containing materials.

Asbestos samples were collected from various materials including tile flooring, mastic, ceiling panels, caulking, sink undercoats, laminate, drywall, joint compound, sealant, insulation, carpet padding, fire control room sandy material, insulation board, roofing, roofing tar, EIFS wall texture, EIFS wall backing, and EIFS wall backing with styrofoam. Only the white undercoat samples collected from sinks in two locations indicated the presence of asbestos above 1 percent. Ramboll has not conducted an independent evaluation to assess the accuracy of the survey and has not confirmed that all materials that may be ACM have been identified.

Approximately eleven paint samples from walls, ceilings, and window trims on the 1st and 4th floors, interior stairwells, and interior and exterior piping, walls, columns, and ceilings. Lead-containing paint was identified in samples collected from two locations: blue paint on metal components in an interior stairwell (stairwell #2) and white paint on interior concrete walls and ceilings.

TCLP analysis for total leachable lead indicated that total leachable lead concentrations were below the threshold that indicates a potential for the materials to leach lead to groundwater.

Visual inspection of the building was conducted to identify materials that potentially contained mercury or PCBs. The visual survey identified 1,014 mercury containing fluorescent light tubes and 485 PCB-containing light ballasts.

- **2015 Phase I Environmental Site Assessment.** A Phase I ESA was conducted at the site by Farallon Consulting (Farallon) in 2015, in association with prior site acquisitions by Unico Properties LLC. Pertinent historical and site-related information contained in the 2015 Phase I report has been incorporated into other sections of this report. The 2015 Phase I report identified the presence of one REC, namely, an adjacent property with known chlorinated volatile organic compound contamination (including PCE, TCE, DCE, and VC) from historical operations by American Linen Supply Company. Further discussion of these issues is contained in Section 7 below. The 2015 Phase I also noted *de minimis* petroleum staining throughout both parking levels at the site.
- **1980 Geotechnical Report.** In November of 1980, a geotechnical engineering study was conducted by Olympic Associates Co. at the site to assess soil and groundwater conditions in a proposed building area.

4.5 User-Provided Information

Ramboll provided ARE with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, AULs, specialized knowledge of the property, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. The user did not provide any information that was not otherwise obtained and reviewed by Ramboll.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Ramboll conducted visits to the site on May 30, 2018 and June 1, 2018. During the site visits, observations of both the interior of the building and exterior portions of the site were made to evaluate if any RECs, as defined in Chapter 2, are present.

5.2 General Site Setting and Observations

Ramboll made observations concerning all of the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in Table 7. Additional information regarding observed and historical items is provided in the sections following the table.

Table 7: Summary of Site Reconnaissance Observations		
ASTM Section	Issue	Observation
Interior and Exterior Issues		
9.4.2.1	Current use(s) of the property	See Section 3.2
9.4.2.2	Past use(s) of the property	See Section 4.2
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the property in connection with identified present or past uses	Present (see Section 5.2.1)
9.4.2.4	Storage tanks: Underground storage tanks (fill ports, vent pipes, manholes) Aboveground storage tanks	Absent Absent
9.4.2.5	Odors (strong, pungent or noxious)	Absent
9.4.2.6	Pools of liquid, standing surface water or sumps	Present (see Section 5.2.3)
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes)	Present (see Section 5.2.1)
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses)	Absent
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products	Absent

Table 7: Summary of Site Reconnaissance Observations		
ASTM Section	Issue	Observation
9.4.2.10	Polychlorinated biphenyls (PCBs) Electrical equipment on-site (e.g., transformers, capacitors) Electrical equipment known or likely to contain PCBs Hydraulic equipment on-site (e.g., elevators, truck dock lifts) Hydraulic equipment known or likely to contain PCBs	(see Section 5.2.2) Present Absent Absent (traction elevators) Absent
Interior Issues		
9.4.3.1	Heating/cooling systems	Present (see Table 1)
9.4.3.2	Stains or corrosion on interior floors, walls or ceilings (except for staining from water)	Absent
9.4.3.3	Floor drains and interior sumps	Present (see Section 5.2.3)
Exterior Issues		
9.4.4.1	Pits, ponds or lagoons on property or adjacent sites	Absent
9.4.4.2	Stained soil or pavement	Present (see Section 5.2.4)
9.4.4.3	Stressed vegetation (from other than insufficient water)	Absent
9.4.4.4	On-site solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal	Absent
9.4.4.5	Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the property	Present (see Section 5.2.3)
9.4.4.6	Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)	Absent
9.4.4.7	Septic systems or cesspools	Absent
Non-Scope Considerations		
N/A	Asbestos Containing Materials	(see Section 5.2.5)
N/A	Lead-Based Paint	(see Section 5.2.6)

Table 7: Summary of Site Reconnaissance Observations		
ASTM Section	Issue	Observation
N/A	Water Intrusion	(see Section 5.2.7)
N/A	Radon	(see Section 5.2.8)
<p>Notes:</p> <p>Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4.</p> <p>See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section.</p> <p>Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered.</p> <p>N/A – Not applicable.</p>		

5.2.1 Hazardous Substances and Petroleum Products

Chemical storage at the site is limited to inks and toners used in printers and copiers, latex paints, and field related chemicals used for field operations by Gray and Osborne, Inc. Consulting Engineers. During the site visit, Ramboll observed several approximately 1-liter pH meter calibration solution bottles, seven boxes of 5-gallon containers of liquid smoke storage, more than 15 1-gallon pails of latex paint, several less than 1-gallon containers of unidentified chemicals, and two empty plastic drums. Although none of the chemicals were equipped with secondary containment, no evidence of release was observed in the chemical storage areas. Chemicals are not stored in exterior areas of the site.

In addition to the chemical listed above, the property management company and janitorial services use maintenance-related materials, such as sanitizers and detergents, which are stored in the janitorial closets.

Wastes are collected in dumpsters (general trash, recycling), which are positioned on pavement west of the building. No evidence of releases was observed in this area.

5.2.2 Polychlorinated Biphenyls

Facility personnel were not aware of on-site equipment that is known to contain polychlorinated biphenyls (PCBs). Transformers are present in an underground vault in the southeast corner of the site and are owned by Seattle City Light. Ramboll could not determine the number of transformers nor their PCB content. Ramboll saw no indication of leaks or releases from electrical equipment observed during the site visit. The installation date of the units is unknown, so it is possible that the transformer oils contain PCBs. However, the units were likely installed at the time of the site development in 1984, after the 1979 federal ban on the manufacture of PCBs, and it is unlikely that the units contain PCBs.

Because the building was constructed after the 1979 federal ban on the manufacture of PCBs, it is also unlikely that hydraulic oils or other types of electrical equipment, such as

capacitors or light ballasts, contain PCBs. Ramboll observed no indication of leaks or releases from electrical equipment during the site visit.

5.2.3 Wastewater and Storm Water

Sanitary wastewater, which includes wastewater from bathrooms, kitchen areas, and janitorial closets, is discharged to the municipal sanitary sewer system. Floor drains were observed in janitorial closets. The facility does not generate process wastewater with the exception of floor washwater, which is discharged to the floor drain in the janitorial closet, and ultimately discharged to the municipal storm sewer system.

Storm water at the site infiltrates into small landscaped areas or enters storm drains on the roof or in paved areas of the site (e.g., the parking garage). Roof drains discharge the storm water to the municipal storm sewer system. Storm drains in the parking garage (and according to the previous site owner possibly the roof drains) discharge to a subsurface collection vault/sand separator (concrete vault) in the northeast corner of the lower parking garage, and ultimately to the municipal storm sewer system (a combined storm/sanitary sewer along Dexter Avenue North). According to facility personnel, the sand separator vault has not been cleaned since the property was purchased in 2015.

5.2.4 Stained Soil or Pavement

Ramboll observed minor petroleum staining across both levels of the parking garage. The underlying asphalt appeared to be in good condition.

5.2.5 Asbestos Containing Materials

Although an asbestos inspection and sampling of suspect building materials in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, were beyond our scope of work, Ramboll made limited visual observations³ of representative building materials in those areas accessed during the site tour to identify readily apparent PACMs and suspect ACMs. OSHA's definition of PACMs is limited to thermal system insulation (TSI) and surfacing materials present in buildings constructed before 1981. Vinyl floor tiles are not considered PACM, but OSHA nonetheless requires that asphalt and vinyl floor tiles present in buildings constructed before 1981 be treated similarly to PACM. The term suspect ACM is not defined by OSHA but can include numerous building materials manufactured using asbestos currently or in the past (e.g., ceiling tiles, roofing materials, joint compound), as well as TSI, surfacing materials, and flooring materials installed after 1981.

The building at the site was not constructed prior to 1981; thus, none of the building materials at the site are considered PACM. Asbestos has continued to be used in some building materials since that time, although it was phased out of use in many building materials during the 1980s. Facility personnel were not aware of any ACM within the building and a comprehensive asbestos survey has not been conducted. Given that the building was constructed in 1984, the possibility that some asbestos is present in the building materials cannot be ruled out. During the site visit, Ramboll observed suspect ACMs [i.e., floor tile, ceiling tile, roofing materials].

³ Ramboll did not observe all building materials or formally survey the facility to determine the presence and condition of PACM and suspect ACM.

There are no regulatory requirements to remove ACMs or evaluate whether building materials contain asbestos unless the materials are damaged and have the potential to release fibers or the materials have the potential to be disturbed during renovation or demolition activities. Ramboll did not observe any obviously damaged building materials.

5.2.6 Lead-Based Paint

Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the building in 1984, it is unlikely that lead-based paint was used historically on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility. Ramboll observed the paint to be in good condition except as described below in Section 5.2.7.

5.2.7 Water Intrusion

Ramboll did not perform a mold survey at the site; however, facility personnel indicated that there have been no previous water intrusion events. During the site visit, Ramboll observed peeling paint and what appeared to be light brown water stained drywall in an approximately 4-inch wide and 4-foot long strip down the wall and an approximately 6 to 7-inch wide 2.5-foot long area along the ceiling in the corner of the stairwell #2 ceiling on the west side of the building. According to facility personnel, they do not know what caused the peeling paint and staining, and they indicated that this was the condition of the area when the building was purchased in 2015. Facility personnel also stated that no new evidence of water intrusion has been observed in this area since at least 2015. Ramboll did not identify obvious visible mold growth in this area during the site visit.

5.2.8 Radon

Based on information included in the EDR database report, the site is located in an area categorized as Zone 3, which has average indoor basement radon levels less than 2 picoCuries per liter (pCi/L). The United States Environmental Protection Agency's (USEPA's) continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. Out of 106 sites surveyed in King County, 3% of sites exceeded indoor basement radon levels of 4 pCi/L. The average radon level of a first-floor room within the surveyed sites in King County was 0.334 pCi/L.

6. LIMITED SUBSURFACE INVESTIGATION

6.1 Scope of Work

As described in Section 1, Ramboll identified the following Other Findings that are indicative of potential subsurface impacts at the site:

- On-Site Impact from Adjacent Property
- Potential Impact from Off-site Properties
- Past Operations at the Site

Ramboll conducted a limited subsurface investigation that included collection of soil, groundwater, and soil vapor samples to evaluate subsurface conditions at the site. Based on Ramboll's review of the site uses and known impacts to adjacent properties, additional investigation was recommended conducted to evaluate subsurface soils for disposal purposes and assess potential migration of impacted groundwater or soil vapor onto the site from adjacent or up-gradient properties.

Ramboll retained subcontractors for utility location services, drilling, and laboratory analysis. Between May 16th and May 23rd, 2018, Ramboll advanced borings at 10 locations (Figure 3) to collect soil, groundwater, and soil vapor samples. Three of the boring locations were advanced in the exterior parking lot on the west side of the site building (SB-1 through SB-3), and seven were advanced in the parking garage (SB-4 through SB-10), which is located at street level beneath the building.

Access to sampling locations in the parking garage beneath the building footprint was limited by low overhead clearance, which limited the size of drilling equipment that could be used to collect samples. Because of the access limitation, the soil borings beneath the garage typically encountered refusal at approximately 10 feet bgs.

6.1.1 Lithology and Hydrogeology

The lithology encountered during this investigation was predominantly coarse-grained soils including fine to medium sands and silty sands with varying amounts of gravel and cobbles down to the maximum depth drilled (approximately 40 feet bgs at 6 locations). Fill material was encountered to approximately 20 to 21.5 feet bgs on the western side of the site (SB-1, SB-2, and SB-3) and to approximately 22.5 to 26.5 feet bgs on the eastern side of the site (SB-6, SB-9, and SB-10). Native soil underlying the fill varied in color (i.e., brown or gray) and lithology (i.e., gradations of silt content, lenses of silts or clean sands) and had a noticeable increase in density from the fill material.

Groundwater was encountered in two locations (SB-3 and SB-9) along the southern edge of the site at depths of approximately 35 to 38 feet bgs.

6.1.2 Soil Sample Collection and Analysis

At soil sampling locations SB-1, SB-2, SB-3, SB-6, SB-9, and SB-10 (Figure 3), an 8-inch diameter borehole was advanced to depths ranging between approximately 37.5 and 41.5 feet bgs using hollow stem auger (HSA) drilling equipment. Due to overhead height access constraints at the borehole locations inside the parking garage, the boreholes at soil sampling locations SB-6, SB-9, and SB-10 were advanced using an HSA limited access rig (LAR), which has a lower overhead clearance height. At soil sample locations SB-4, SB-5,

SB-7, and SB-8, a 2.25-inch diameter borehole was advanced using direct-push technology (DPT) drilling equipment. In these locations, the boreholes were advanced until drilling refusal, likely due to cobbles and/or rocks at depths ranging between 7 and 10 feet bgs. In each borehole, soil cores were withdrawn from the subsurface and screened for VOCs using a photoionization detector (PID). Depending on soil recovery, soil samples were generally collected at approximately 5-foot intervals. Sample containers were labeled, sealed in zip-closure bags, stored on ice in an insulated container, and delivered to a fixed-base analytical laboratory under chain-of-custody documentation.

Soil samples were analyzed for VOCs by United States Environmental Protection Agency (USEPA) Method 8260B, total petroleum hydrocarbons (TPH) by Northwest Methods NWTPH-Gx (gasoline-range) and NWTPH-Dx (diesel and heavy oil-range), and Resource Conservation and Recovery Act (RCRA)-8 metals. Select deeper samples from each location (i.e., samples from below 30 feet bgs), were placed on hold by the laboratory pending initial analytical results.

6.1.3 Grab Groundwater Sample Collection and Analysis

At two boring locations where groundwater was reached (SB-3 and SB-9), grab groundwater samples were collected through dedicated, two-inch diameter polyvinyl chloride (PVC) temporary well casings which were installed within 8-inch HSA soil borings. Screened intervals extended from approximately 25 feet bgs to 38 feet bgs. Samples were collected in laboratory-provided containers using disposable polyethylene 1.5" diameter bailers.

Groundwater samples were labeled, sealed in zip-closure bags, stored on ice in an insulated container, and delivered to a fixed-base analytical laboratory under chain-of-custody documentation. Groundwater samples were analyzed for VOCs by USEPA Method 8260B and total petroleum hydrocarbons by Northwest Methods NWTPH-Gx (gasoline-range) and NWTPH-Dx (diesel and heavy oil-range).

6.1.4 Soil Vapor Probe Installation and Sampling

Soil vapor probes were installed in 8 of the 10 boreholes installed across the site (all but SB-2 and SB-6), and soil vapor samples were collected in general accordance with Ecology protocols for soil vapor investigations.

At SB-1, SB-3, SB-9, and SB-10, bentonite granules were placed in each borehole in six-inch lifts and hydrated between lifts using potable water. Bentonite was placed to depths selected based on lithology and other field observations, such as moisture. A stainless steel sintered soil vapor probe was then connected to Teflon tubing and suspended in each borehole at depths ranging from 21.0 to 30.0 feet bgs. A one-foot sand pack of clean No. 2/12 sand was emplaced around the soil vapor probe. Additional bentonite granules were placed in six-inch lifts and hydrated between lifts using potable water to depths selected based on lithology. A second stainless steel sintered soil vapor probe was then connected to Teflon tubing and suspended in each borehole at depths ranging from 5.5 to 6.5 feet bgs. A one-foot sand pack of clean No. 2/12 sand was emplaced around the soil vapor probe. Additional bentonite granules were placed in six-inch lifts and hydrated between lifts using potable water to approximately 1.0 to 3.0 feet bgs.

The soil vapor samples were collected in accordance with Ecology's "Guidance for Evaluation Soil Vapor Intrusion in Washington State: Investigation and Remedial Action" document⁴ in laboratory-provided one-liter Summa canisters that were individually certified as clean to the method detection limit for target analytes, and shipped to a fixed-base analytical laboratory under chain-of-custody documentation. The samples were analyzed for VOCs and TPH-Gx by EPA Method TO-15. At the conclusion of soil vapor sampling, each soil vapor probe was destroyed and the surface was completed with concrete to match the existing grade.

6.2 Screening Criteria

Analytical results presented in this report are compared to applicable Washington State MTCA criteria established by Ecology. Groundwater and soil results are compared to MTCA Method A criteria for unrestricted land use (or Method B criteria, for analytes with no Method A criteria established). For soil vapor, there are no established Method A values. Thus, samples collected between approximately 5 to 15 feet bgs, results are compared to MTCA Method B subslab soil gas screening levels and for samples collected at depths below 15 feet bgs, results are compared to MTCA Method B deep soil gas screening levels.

MTCA criteria are health-risk based screening criteria developed by Ecology. The specific MTCA criteria used for soil, groundwater, and soil vapor constituents are further detailed in Tables 8 through 10.

6.3 Soil Sampling Results

Concentrations detected in soil samples collected during this sampling event are summarized below and in Table 8, and laboratory results are provided in Appendix G.

No volatile organic compounds, including chlorinated organic compounds, were detected in soil above laboratory reporting limits. Eight constituents were detected in soil including seven metals (arsenic, barium, cadmium, chromium [total], lead, selenium, and silver) and total petroleum hydrocarbon heavy oil range organics (TPH-Heavy Oil). None of the detected metals concentrations exceeded Ecology MTCA Method A criteria. All metals detected in soil were below regional background concentrations in soil. TPH-Heavy Oil was detected at concentrations ranging from 119 to 386 milligrams per kilogram (mg/kg), which are well below the most conservative MTCA Method A criteria for unrestricted land use (2,000 mg/kg). Because impacts to soil were not identified above the MTCA criteria, none of the soil samples held for additional testing were analyzed.⁵

For potential future waste classification purposes (in the event redevelopment generates soil for off-site disposal), concentrations of metals detected appear to be well below concentrations that would be expected to trigger federal hazardous waste or Washington State Dangerous Waste criteria for metals. Due to access limitations, additional waste characterization may be required as part of future site redevelopment activities.

6.4 Groundwater Sampling Results

Chemicals detected in groundwater samples collected during this sampling event are summarized below and in Table 9. Sample locations are shown on Figure 3 and along with

⁴ During sampling of soil vapor, helium was used as a leak detection tracer gas.

⁵ For several constituents, the laboratory reporting limit was higher than the MTCA Method A/B criteria. According to the laboratory, this may occur due to low sample volume, or adjustments to laboratory reporting limits due to sample moisture.

concentrations for those analytes that exceeded applicable MTCA criteria. Laboratory results are provided in Appendix G.

Two constituents (chloroform and #2 fuel oil/diesel) were detected in groundwater samples collected from the southwestern and southeastern corners of the site (SB-3 and SB-9, respectively). Chloroform was detected in groundwater at a concentration (3.54 micrograms per liter [$\mu\text{g/L}$]) slightly exceeding MTCA Method B criteria (1.41 $\mu\text{g/L}$) in the southwest corner of the site (SB-3, the same location where shallow and deep soil vapor concentrations of chloroform exceeded applicable MTCA criteria). Concentrations of #2 fuel oil/diesel were detected in both ground water samples, but at concentrations well below MTCA Method A criteria (500 $\mu\text{g/L}$).

6.5 Soil Vapor Sampling Results

VOC concentrations in soil vapor samples collected during this sampling event are summarized below and in Table 10. Sample locations are shown on Figure 3, and laboratory analytical data is provided in Appendix G.

Thirty VOCs were detected in shallow and deep soil vapor. Of these, only five (i.e., acrolein, benzene, bromodichloromethane, chloroform, and naphthalene) were detected at concentrations exceeding MTCA Method B criteria.

- Acrolein (at SB-3) and naphthalene (at SB-1, SB-3, and SB-4) were only detected at concentrations exceeding MTCA Method B criteria in shallow soil vapor (approximately 5.5 to 6.5 feet bgs) on the western side of the site.
- Bromodichloromethane was only detected in deep soil vapor (approximately 23 feet bgs) in one location in the northeastern corner of the site (SB-10) at a concentration slightly exceeding MTCA Method B criteria.
- Benzene and chloroform were both detected in shallow and deep soil vapor on the western and eastern sides of the site.
 - Benzene was detected at concentrations slightly exceeding MTCA Method B in shallow soil vapor (approximately 5.5 to 6.5 feet bgs) at SB-1, SB-3, SB-4, SB-7, SB-8, SB-9, SB-10. SB-9, in the southeastern corner of the site, is the only location where benzene was detected in both shallow and deep soil vapor at concentrations slightly exceeding MTCA Method B criteria (deep soil vapor collected at approximately 30 feet bgs).
 - Chloroform was detected in shallow (approximately 5.5 to 6.5 feet bgs) and deep soil vapor (approximately 21 to 21.5 feet bgs) on the west side of the site at SB-1 and SB-3. In the southeastern corner, at SB-9, chloroform was only detected in deep soil vapor (approximately 30 feet bgs). All detected concentrations of chloroform exceeded their respective MTCA Method B criteria, except deep soil vapor at SB-9.
- Gasoline range organics were detected in all soil vapor sample locations at concentrations ranging from 464 to 2,160 micrograms per cubic meter ($\mu\text{g/m}^3$) in shallow soil vapor (approximately 5.5 to 6.5 feet bgs) and 1,650 to 4,070 $\mu\text{g/m}^3$ in deep soil vapor (approximately 21 to 30 feet bgs). There are no Ecology MTCA criteria for this constituent. For reference, in Oregon, the Oregon Department of Environmental Quality publishes generic risk based concentrations (RBCs) for preliminary assessment of risks to human health and the environment. Generic gasoline soil vapor RBCs for

residential/urban residential properties is 79,000 µg/m³ and 1,700,000 µg/m³ for occupational properties.

6.6 Site Investigation Conclusions

Based on the results of the limited soil, groundwater, and soil vapor sampling conducted as part of this investigation, significant or widespread impacts were not identified (see Figure 3). Analytes detected at the site include heavy range petroleum hydrocarbons and metals in soil; chloroform in groundwater; and several VOCs in shallow and deep soil vapor.

As part of future redevelopment activities, additional sampling to further refine the existing dataset may be necessary to further evaluate vapor intrusion risks, and develop a more comprehensive soil profile for disposal purposes. These activities should be conducted after demolition of the existing building.

7. FINDINGS, OPINION, AND CONCLUSIONS

Ramboll performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the site in April 2018. The objective of the ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Section 8 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 6.2.

7.1 Findings, Opinions, and Conclusions

7.1.1 Recognized Environmental Conditions

This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

7.1.2 2018 Site Investigation

Ramboll conducted a limited subsurface investigation at the site in May 2018. The investigation included the collection of soil, groundwater, and/or soil vapor samples from approximately 10 locations to evaluate subsurface soils for disposal purposes and potential migration of impacted groundwater or soil vapor onto the site from adjacent or up-gradient properties. The investigation identified the presence of heavy range petroleum hydrocarbons and metals in soil; chloroform in groundwater; and several VOCs in shallow and deep soil vapor. When compared to relevant Ecology MTCA criteria, results of the limited investigation did not identify significant impacts beneath the site in soil, groundwater or soil vapor.

Detected analyte concentrations in soil did not exceed Ecology's MTCA criteria.

In groundwater, one analyte (chloroform) was detected slightly above MTCA criteria at the presumed upgradient site boundary (west). A source for the chloroform detection has not been identified on the site, and it does not appear to be the result of impacts from the neighboring dry cleaner site to the east. Due to the nature of this grab groundwater sample (i.e., from temporary probe, not a developed well), this result is likely biased high, and does not represent a significant concern.

The majority of soil vapor detections are below or only slightly exceed the MTCA criteria. Based on available soil vapor results, it is likely that redevelopment activities (including soil removal and the installation of a sealed concrete parking structure with typical venting and air exchange rates associated with parking garages) may be sufficient to mitigate potential vapor intrusion risks for future building occupants.

7.1.3 Other Findings

In addition to REC discussed above, the following additional findings related to potential contamination concerns were identified:

- **Potential Impact from Off-Site Properties.** The site is located adjacent to and in the presumed downgradient direction from several off-site properties listed with open status on databases indicative of potential soil or groundwater contamination. Specifically, in July 1989, benzene, non-halogenated organics, petroleum diesel, and petroleum gasoline were discovered in soil and groundwater at 700 Dexter property, located adjacent to the east of the site. The impacts were attributed to releases from a refueling facility that operated between 1930 and 1966 and an automotive repair shop that operated between 1947 and 1966. In August 1993, chlorinated volatile organic compounds (CVOCs) were

discovered in soil and groundwater at 700 Dexter Avenue North. The CVOC impacts were attributed to releases from dry cleaning operations that occurred between 1966 and the mid-1990s on the 700 Dexter property. From the mid-1990s through 2012, buildings on 700 Dexter property were occupied by businesses that included automotive repair, a bakery, and a car rental office. The property was vacant in 2013 in preparation for demolition of the existing structures and redevelopment of the lot. In March 2013, five underground storage tanks (USTs) were removed from the 700 Dexter property. Mercury and petroleum-impacted soil was discovered upon the removal of the USTs and the impacted soil was excavated from 700 Dexter Avenue North. In April 2013, an ERH/SVE system was installed to remediate CVOCs in soil and groundwater beneath the 700 Dexter property. An estimated 12,000 pounds of CVOCs (reportedly, representing approximately 98 percent of the original CVOC mass from soil and groundwater) was removed by November 2013. The ERH/SVE system was shut down in December 2013. Various feasibility studies and pilot tests occurred between 2013 and 2017 to evaluate the next stage of remediation. In January 2018, injection of edible oil substrate was conducted to remediate low concentrations of CVOCs remaining at 700 Dexter property. Groundwater flows generally to the east, and the depth to impacted groundwater is approximately 30 feet bgs in the west portion of 700 Dexter property. Cleanup is still in progress.

In addition, there are a number of properties with identified impacts to soil and/or groundwater for constituents, including gasoline and petroleum products, located upgradient between approximately 490 and 1,100 feet west of the site, that have not received regulatory closure. Based on the available information in Washington Department of Ecology's (Ecology's) Toxics Cleanup Program Web Reporting, there is no information as to whether contamination from the noted properties is migrating to the site. If contamination associated with off-site properties is found to have migrated onto the subject site, it is expected that any remedial activities would be the responsibility of the entity(ies) named in the listing or other designated responsible party and not 701 Dexter Investments, LLC in accordance with Washington State law.

The risk of widespread contamination as the result of migration from an adjacent or upgradient property is mitigated by the results of the limited 2018 site investigation that did not identify significant or widespread impacts in soil, groundwater, or soil vapor at the site. Future construction of a subsurface parking garage may also minimize the potential for vapor intrusion.

- **Past Operations at the Site.** The site was previously used for residential purposes from at least the 1890s through the 1930s. During this time period, a few scattered residences and associated outbuildings were present on the site, and it is possible that aboveground or underground fuel oil tanks may have been used for heating purposes. Absent further information regarding the specific nature of historical chemical use, chemical handling practices, and associated wastes, Ramboll cannot rule out the possibility that spills or releases of chemicals or petroleum products may have occurred and adversely affected the soil and groundwater conditions at the site. However, the risk of widespread contamination is mitigated by several factors: results of the limited 2018 site investigation did not identify significant or widespread impacts, no visual or olfactory evidence of contamination (e.g., stained soil or odors) was observed, facility personnel are not aware of any major spills or releases at the site, there are no floor drains in

chemical storage areas, there are no other obvious pathways to the subsurface, and that operations conducted since the 1980s are not chemically intensive and are unlikely to have caused a release.

7.1.4 De Minimis Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll identified the following *de minimis* conditions related to the site:

- **Sand Separator/Storm water vault.** A subsurface collection vault/sand separator (concrete vault) in the northeast corner of the lower parking garage, and ultimately to the municipal storm sewer system (a combined storm/sanitary sewer along Dexter Avenue North). According to facility personnel, the sand separator vault has not been cleaned since the property was purchased in 2015. Although the integrity of the vault has not been assessed recently, facility personnel indicated that the vault only collects storm water from drains in the parking garage (and according to the previous site owner possibly the roof drains) prior to discharge to the combined municipal storm and sanitary sewer. Because results of the recent 2018 site investigation did not identify evidence of widespread impacts to soil, groundwater, and soil vapor in this area of the site, the nature of the fluids collected in the separator, and the absence of known past releases at the site, it is unlikely to represent a threat to human health or the environment. Thus, Ramboll characterizes this finding as a *de minimis* condition.
- **Pavement Staining.** Ramboll observed multiple areas of exterior pavement where oil stains were apparent, approximately one to two square feet in size. The stains were limited in areal extent, the underlying pavement appeared to be intact, and no stains appeared to reach storm water drains. As such, Ramboll considers this matter to represent a *de minimis* condition.

7.1.5 Non-Scope Considerations

Ramboll identified the following findings that relate to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials.** The building was constructed after asbestos was generally phased out of use in most building material applications in the early 1980s; thus, none of the building materials at the site are considered PACM. In June 2017, a Limited Hazardous Materials Survey was conducted at the site by NVL. The survey included the collection and analysis by of approximately 217 samples throughout the building including tile flooring, mastic, ceiling panels, caulking, sink undercoats, laminate, drywall, joint compound, sealant, insulation, carpet padding, fire control room sandy material, insulation board, roofing, roofing tar, EIFS wall texture, EIFS wall backing, and EIFS wall backing with styrofoam. Only the white undercoat samples collected from sinks in two locations indicated the presence of asbestos above 1 percent. Ramboll has not conducted an independent evaluation to assess the accuracy of the survey and has not confirmed that all materials that may be ACM have been identified. An AOMP should be developed, and prior to redevelopment or demolition activities, all ACMs should be abated by a licensed contractor.

- **Water Intrusion.** Ramboll did not perform a mold survey at the site; however, facility personnel indicated that there have been no previous water intrusion events. During the site visit, Ramboll observed peeling paint and what appeared to be light brown water stained drywall in an approximately 4-inch wide and 4-foot long strip down the wall and an approximately 6 to 7-inch wide 2.5-foot long area along the ceiling in the corner of the stairwell #2 ceiling on the west side of the building. According to facility personnel, they do not know what caused the peeling paint and staining, and they indicated that this was the condition of the area when the building was purchased in 2015. Facility personnel also stated that no new evidence of water intrusion has been observed in this area since at least 2015. Ramboll did not identify obvious visible mold growth in this area during the site visit.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the building in 1984, it is unlikely that lead-based paint was used on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility. However, in June 2017, a Limited Hazardous Materials Survey was conducted at the site by NVL. The survey included the collection and analysis of approximately eleven paint samples from walls, ceilings, and window trims on the 1st and 4th floors, interior stairwells, and interior and exterior piping, walls, columns, and ceilings. Lead-containing paint was identified in samples collected from two locations: blue paint on metal components in an interior stairwell (stairwell #2) and white paint on interior concrete walls and ceilings. Ramboll observed the paint throughout the site to be in good condition, except as noted above in the ceiling of stairwell 2.
- **Radon.** Based on information included in the EDR database report, the site is located in an area categorized as Zone 3, which has average indoor basement radon levels less than 2 pCi/L. The United States Environmental Protection Agency's (USEPA's) continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. Out of 106 sites surveyed in King County, 3% of sites exceeded indoor basement radon levels of 4 pCi/L. The average radon level of a first-floor room within the surveyed sites in King County was 0.334 pCi/L.

7.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Due to extended age of the site, it was not possible to interview representatives dating back to the site's first developed commercial use in the 1930s. However, Ramboll

conducted interviews with representatives of Unico Properties with tenure at the site dating back to 2015 and reviewed other historical sources regarding former uses of the property.

- Ramboll did not inspect all areas of each individual space. Ramboll selected tenant spaces for visual review based on the potential for that tenant to manage or use hazardous materials above "*de minimis*" amounts (e.g., engineering firm with field equipment storage). Ramboll toured occupied and vacant office areas that, according to facility personnel, are presentative of the office spaces that were not toured. Areas not toured during the site visit include: Horace C. Francis (accounting firm) and KOM Consulting (state and local tax advisors) office space on Floor 4, all but one vacant suite on floor 4 (Ramboll only toured suite 410 on the northeast side of the site), and a vacant suite (108) on the north side of Floor 1.
- Historical information, such as aerial photographs, was not readily available to characterize the property from the present back to the property's obvious first developed use or 1940, whichever is earlier. The earliest readily available historical source that would indicate specific site uses is a Sanborn Map dated 1893, which shows that at least a portion of the property was already developed for residential uses.
- Due to access constraints, Ramboll was not able to inspect the interior of the subsurface transformer vault.
- Ramboll provided the Client with a User Questionnaire consistent with Appendix X3 of the ASTM Standard; however, a response to the questionnaire had not been received as of the time this report was prepared.
- Ramboll has requested site-related information, but not yet received a response, from the King County Environmental Health Department.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps.

9. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

De minimis Condition:

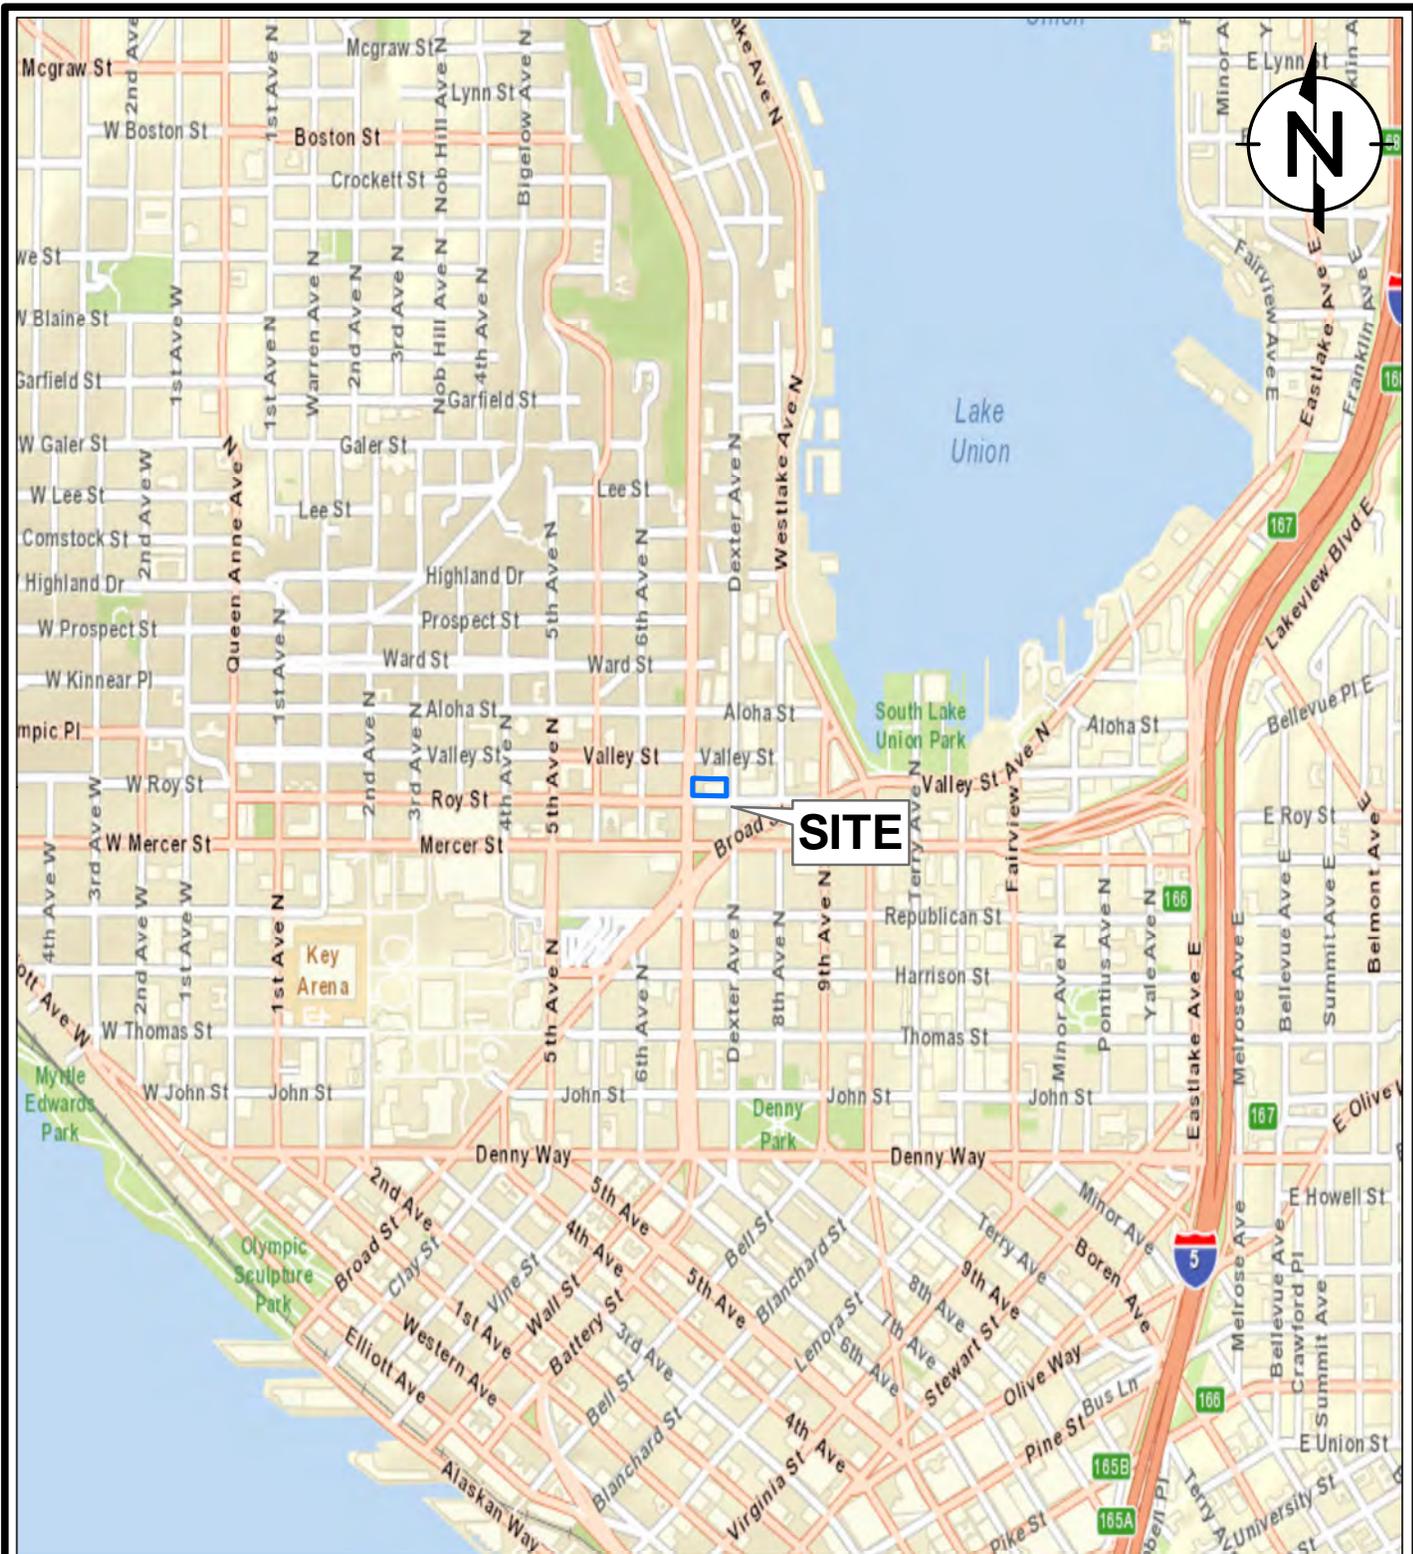

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap / Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

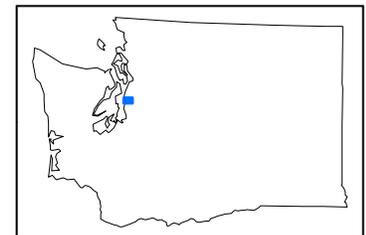

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

Notes:

Bolded values indicate detections

Orange highlighted values indicate samples with no detections, but laboratory reporting limits exceed Method B MTCA cleanup levels

Yellow highlighted values indicate exceedances in MTCA Method B cleanup levels

* = Flagged value is not within established control limits

< = concentration is less than the lab reporting limit

bgs = below ground surface

CUL = Cleanup Level

D = Dilution was required

E = Value above quantitation range

µ/m³ = micrograms per cubic meter

MTCA = Washington State Model Toxics Control Act

NA = Not available/not applicable

NWTPH-Gx = Northwest Total Petroleum Hydrocarbons - Gasoline Range

VOCs = Volatile Organic Compounds

APPENDIX B ENVIRONMENTAL DATABASE REPORT

NOTES ON ENVIRONMENTAL DATABASE REPORT

The third-party provider conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology “approximate minimum search distance” to refer to the radii searched in the environmental database report.

The third-party provider conducted the search of environmental databases in March 2018. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/11/2017 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 5 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

WA HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the WA HSL list, as provided by EDR, and dated 09/13/2017 has revealed that there are 28 WA HSL sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 01/17/2018 has revealed that there are 116 WA CSCSL sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

WA LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Ecology's Leaking Underground Storage Tanks Site List.

A review of the WA LUST list, as provided by EDR, has revealed that there are 22 WA LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

WA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Ecology's Statewide UST Site/Tank Report.

A review of the WA UST list, as provided by EDR, and dated 11/20/2017 has revealed that there are 26 WA UST sites within approximately 0.25 miles of the target property.

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 01/17/2018 has revealed that there are 36 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/11/2017 has revealed that there are 40 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

WASHINGTON NATURAL G	815 MERCER ST	ESE 0 - 1/8 (0.122 mi.)	P68	318

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 52 EDR Hist Auto sites within approximately 0.25 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 27 EDR Hist

EXECUTIVE SUMMARY

Cleaner sites within approximately 0.25 miles of the target property.

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110009511625

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

FINDS:

Registry ID: 110005405365

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Comments:	There were an extra of 10,606.6 sf of asbestos texture and join compound associated with sheet rock that was abated. There might be more walls and ceiling that might be abated, thats why this was put on hold.

FINDS:

Registry ID: 110005394867

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

Tank Closure Date: Not reported
Capacity Range: 10,000 to 19,999 Gallons
Tank Permit Expiration Date: 02/28/2010
Tank Upgrade Date: 02/05/1998
Tank Spill Prevention: Spill Bucket/Spill Box
Tank Overfill Prevention: Overfill Alarm
Tank Material: Fiberglass Reinforced Plastic
Tank Construction: Single Wall Tank
Tank Tightness Test: Part of Automatic Tank Gauging (ATG) System
Tank Corrosion Protection: Corrosion Resistant
Tank Manifold: Not reported
Tank Release Detection: Automatic Tank Gauging
Tank SFC Type: Not reported
Pipe Material: Fiberglass
Pipe Construction: Double Wall Pipe
Pipe Primary Release Detection: Automatic Line Leak Detector (ALLD)
Pipe Second Release Detection: Interstitial Monitoring (or Sump Sensor)
Pipe Corrosion Protection: Corrosion Resistant
Pipe Pumping System: Pressurized System
Responsible Unit: NORTHWEST
Dispencer/Pump SFC Type: Not reported

Tank Name: 3
Tag Number: A0407
Tank Status: Removed

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

- . Waste code: F005
- . Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

- . Waste code: P014
- . Waste name: BENZENETHIOL (OR) THIOPHENOL

- . Waste code: P098
- . Waste name: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

- . Waste code: P105
- . Waste name: SODIUM AZIDE

- . Waste code: U003
- . Waste name: ACETONITRILE (I,T)

- . Waste code: U007
- . Waste name: 2-PROPENAMIDE (OR) ACRYLAMIDE

- . Waste code: U044
- . Waste name: CHLOROFORM (OR) METHANE, TRICHLORO-

- . Waste code: U056
- . Waste name: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

- . Waste code: U067
- . Waste name: ETHANE, 1,2-DIBROMO- (OR) ETHYLENE DIBROMIDE

- . Waste code: U080
- . Waste name: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

- . Waste code: U112
- . Waste name: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

- . Waste code: U117
- . Waste name: ETHANE, 1,1'-OXYBIS-(I) (OR) ETHYL ETHER (I)

- . Waste code: U122
- . Waste name: FORMALDEHYDE

- . Waste code: U123
- . Waste name: FORMIC ACID (C,T)

- . Waste code: U133
- . Waste name: HYDRAZINE (R,T)

Comments: I am receiving an error code that has "production process" listed in both "i" and "ii". These definitions are not the same as in the help menu, but the system will not let me submit. Error msg: The waste Source Code you reported in Section A-7 does not match the Origin Code you reported in Section A-9. Please correct the Source Code or the Origin Code. Wastes from production processes, service activities, routine clean-ups, and residuals from treating other waste streams are recurrent. Wastes from spill cleanups, production processes, services, and routine clean-up are non-recurrent. A chart showing Origin Codes and Source Codes in on the Annual Reporting Website at <http://www.ecy.wa.gov/programs/hwtr/waste-report/index.html>, and in

the current "Dangerous Waste Annual Report Forms and Line by Line Instructions", Ecology publication number 03-04-018. (Rule ID: 199) The Help tab definition of "i" in the A-9 origin code section reads: i. The waste stream is recurrent: it was generated on-site from a production process, a service activity, or a routine cleanup (including off-specification or spent chemicals). This waste is from a routine Laboratory Analytical production process. I will use G19 in place of G22 in order to submit. Please let me know your preference. Thank you.

Comments: I am receiving an error code that has "production process" listed in both "i" and "ii". These definitions are not the same as in the help menu, but the system will not let me submit. Error msg: The waste Source Code you reported in Section A-7 does not match the Origin Code you reported in Section A-9. Please correct the Source Code or the Origin Code. Wastes from production processes, service activities, routine clean-ups, and residuals from treating other waste streams are recurrent. Wastes from spill cleanups, production processes, services, and routine clean-up are non-recurrent. A chart showing Origin Codes and Source Codes in on the Annual Reporting Website at <http://www.ecy.wa.gov/programs/hwtr/waste-report/index.html>, and in

the current "Dangerous Waste Annual Report Forms and Line by Line Instructions", Ecology publication number 03-04-018. (Rule ID: 199) The Help tab definition of "i" in the A-9 origin code section reads: i. The waste stream is recurrent: it was generated on-site from a production process, a service activity, or a routine cleanup (including off-specification or spent chemicals). This waste is from a routine Laboratory Analytical production process. I will use G19 in place of G22 in order to submit. Please let me know your preference. Thank you.

Comments: I am receiving an error code that has "production process" listed in both "i" and "ii". These definitions are not the same as in the help menu, but the system will not let me submit. Error msg: The waste Source Code you reported in Section A-7 does not match the Origin Code you reported in Section A-9. Please correct the Source Code or the Origin Code. Wastes from production processes, service activities, routine clean-ups, and residuals from treating other waste streams are recurrent. Wastes from spill cleanups, production processes, services, and routine clean-up are non-recurrent. A chart showing Origin Codes and Source Codes in on the Annual Reporting Website at <http://www.ecy.wa.gov/programs/hwtr/waste-report/index.html>, and in

the current "Dangerous Waste Annual Report Forms and Line by Line Instructions", Ecology publication number 03-04-018. (Rule ID: 199) The Help tab definition of "i" in the A-9 origin code section reads: i. The waste stream is recurrent: it was generated on-site from a production process, a service activity, or a routine cleanup (including off-specification or spent chemicals). This waste is from a routine Laboratory Analytical production process. I will use G19 in place of G22 in order to submit. Please let me know your preference. Thank you.

Comments: I am receiving an error code that has "production process" listed in both "i" and "ii". These definitions are not the same as in the help menu, but the system will not let me submit. Error msg: The waste Source Code you reported in Section A-7 does not match the Origin Code you reported in Section A-9. Please correct the Source Code or the Origin Code. Wastes from production processes, service activities, routine clean-ups, and residuals from treating other waste streams are recurrent. Wastes from spill cleanups, production processes, services, and routine clean-up are non-recurrent. A chart showing Origin Codes and Source Codes in on the Annual Reporting Website at <http://www.ecy.wa.gov/programs/hwtr/waste-report/index.html>, and in

the current "Dangerous Waste Annual Report Forms and Line by Line Instructions", Ecology publication number 03-04-018. (Rule ID: 199) The Help tab definition of "i" in the A-9 origin code section reads: i. The waste stream is recurrent: it was generated on-site from a production process, a service activity, or a routine cleanup (including off-specification or spent chemicals). This waste is from a routine Laboratory Analytical production process. I will use G19 in place of G22 in order to submit. Please let me know your preference. Thank you.
