**QUARTERLY REPORT  
RCRA CORRECTIVE ACTION PROGRAM  
FOURTH QUARTER 2017**  
Boeing Renton Facility  
Renton, Washington

## **1.0 INTRODUCTION**

This report provides progress reporting in conformance with Section VII.B.1 of Agreed Order No. 8191 (Order) and summarizes cleanup actions and monitoring conducted at the Boeing Renton Facility (the Facility) during the fourth quarter 2017. This work is required under the Resource Conservation and Recovery Act (RCRA) Corrective Action Program being performed at the Boeing Renton Facility in Renton, Washington. Corrective action activities are performed for those solid waste management units (SWMUs), areas of concern (AOCs), and other areas where cleanup actions are ongoing. Monitoring, cleanup activities, and reporting are being conducted as part of the final remedy implementation described in the Engineering Design Report (EDR) (AMEC, 2014). The groundwater monitoring program is detailed in the Second Addendum to the Compliance Monitoring Plan (Amec Foster Wheeler, 2017a) which contains changes to the revised Compliance Monitoring Plan (Amec Foster Wheeler, 2016a) that superseded the original plan presented in Appendix D of the EDR (AMEC, 2014).

Groundwater monitoring and final cleanup action implementation are being conducted at the following areas (the ongoing remedies for each of these areas are noted in parentheses):

- SWMU-168: (monitored natural attenuation [MNA]);
- SWMU-172 and SWMU-174: (bioremediation, soil vapor extraction [SVE] and monitored attenuation [MA]);
- Building 4-78/79 SWMU/AOC Group: (bioremediation, SVE, MNA, and MA);
- Former Fuel Farm AOC Group: (MNA);
- AOC-001 and AOC-002: (bioremediation and MA);
- AOC-003: (bioremediation and MA);
- AOC-004: (bioremediation and MA);
- AOC-034 and AOC-035: (MNA);

- AOC-060: (bioremediation and MA);
- AOC-090: (bioremediation and MA);
- Building 4-70: (bioremediation and MA);
- Lot 20/Former Building 10-71 Parcel: (bioremediation and MA); and
- Apron A: (bioremediation and MA).

The background and investigation history for each affected unit or group of units is described in the Cleanup Action Plan (CAP) (AMEC, 2012) and/or EDR (AMEC, 2014). It should be noted that monitoring for the Building 10-71 area and Building 4-70 area is included in this monitoring report to maintain continuity with the monitoring program that has been conducted for these areas for several years and as approved by the Washington State Department of Ecology (Ecology); these two areas are not addressed explicitly in the Compliance Monitoring Plan but are being addressed per Ecology's December 30, 2015, email to Boeing with comments on the revised Compliance Monitoring Plan. Monitoring for Apron A is also included, as semiannual monitoring began in this area starting in the fourth quarter of 2016, as reported in the Apron A Investigation Results report (Amec Foster Wheeler, 2016b).

This quarterly report:

- Describes work completed during the reporting quarter;
- Describes any deviations from corrective action tasks required under the Order and/or CAP;
- Describes revisions to the corrective action schedule;
- Describes work projected to occur during the next quarter, including any planned deviation from the CAP;
- Discusses remediation operation and maintenance activities conducted at the Facility during the reporting period;
- Documents monitoring activities conducted during the quarter;
- Describes and discusses trends in monitoring data;
- Assesses remediation at each area; and
- Assesses attainment of cleanup levels (CULs) at the conditional points of compliance (CPOCs).

This report presents this information for the fourth quarter of 2017, the period from October through December 2017.

## **1.1 QUARTERLY PROGRESS REPORTING**

In accordance with the requirements of the Order, corrective action activities were conducted at the Facility, as described in this report. As approved by Ecology in their letter dated November 18, 2015, progress reporting is conducted on a quarterly basis in conjunction with monitoring, operations, and maintenance activities conducted under the CAP.

### **1.1.1 Work Completed in the Fourth Quarter 2017**

The following work was completed during the fourth quarter of 2017, the period from October through December 2017:

- The SVE systems for the Building 4-78/79 area and for SWMU-172/174 continued operation until December 15, 2017, when both systems were shut down.
- Groundwater monitoring for the fourth quarter of 2017 was completed during November 2017.
- On behalf of Boeing, Amec Foster Wheeler submitted the Third Quarter 2017 Report to Ecology on November 15, 2017.
- On behalf of Boeing, Amec Foster Wheeler submitted the Second Addendum to the Compliance Monitoring Plan on December 8, 2017.
- Five injection wells (B78-17, B78-18, B78-19, B78-20, and B78-21) were installed on October 5, 2017 at the Building 4-78/79 SWMU/AOC Group. After development and baseline sampling, an initial round of nitrate/sulfate injections was completed in these wells, as well as in B78-11 and B78-13, on October 11, 2017. All work was performed in accordance with the Tech Memo submitted to Ecology in September 2017, except that the nitrate/sulfate injections were conducted in injection wells B78-11 and B78-13 since they were in the immediate treatment area.
- On behalf of Boeing, Amec Foster Wheeler submitted the Apron R Well Abandonment and Replacement Memo describing the impact to monitoring wells during Apron R construction on December 21, 2017.

### **1.1.2 Deviations from Required Tasks**

No deviations from tasks required in the Order occurred during this activity period.

### **1.1.3 Deviations from CAP**

There were no deviations from the CAP during this activity period, and there are no planned deviations from the CAP expected for the next activity period.

### **1.1.4 Schedule Revisions**

There were no significant revisions to the schedule for this reporting period and no revisions are expected for the next activity period.

### **1.1.5 Work Projected for the Next Quarter**

The following work is projected for the first quarter of 2018:

- Reporting will be completed in accordance with the Order, CAP, EDR, and any changes approved by Ecology.
- Groundwater sampling and analysis for the first quarter of 2018 will be completed.
- SVE rebound vapor sampling will continue at SWMU-172/174 and the Building 4-78/79 Area as described in Section 3.2 of Appendix D of the Third Quarter Monitoring Report (Amec Foster Wheeler, 2017b).
- Substrate injections are planned for January 2018 for the Building 4-78/79 Area as described in Section 3.0 or Appendix D.
- CALIBRE will conduct additional investigations at the Building 4-78/79 Area to address the benzene concentrations observed in groundwater in accordance with their work plan proposal submitted on January 12, 2018.

## 2.0 GROUNDWATER SAMPLING METHODOLOGY

Groundwater was sampled and analyzed as described in Appendix A. These procedures are in accordance with the methods specified in the soil and groundwater sampling methodology, which is described in more detail in the revised Compliance Monitoring Plan (Amec Foster Wheeler, 2016a). Table A-1 summarizes the current groundwater monitoring program and constituents of concern (COCs) specified in the CAP and revised in the Second Addendum to the Compliance Monitoring Plan (Amec Foster Wheeler, 2017a) for all Facility corrective action areas. Table A-1 also includes Building 4-70, Lot 20/Former Building 10-71, and Apron A, which were not included in the CAP. Table A-2 summarizes the current groundwater monitoring program for the corrective action areas that include MNA or MA as part of the cleanup remedy specified in the CAP. Table A-2 also includes Building 4-70 and Apron A, which were not specified in the CAP. Any changes or exceptions to the sampling or analytical methods cited in Appendix A during the quarter are described in the applicable subsections in Section 3. The field data sheets, which document the groundwater sample collection and field parameter monitoring for each well sampled during this quarter, are included in Appendix B.

The analytical methods, field duplicate, lab duplicate, and matrix spike/matrix spike duplicate frequencies are specified in the Quality Assurance Project Plan (Amec Foster Wheeler, 2016c). The full analytical reports provided by the laboratory are provided separately on compact disc. The data validation memoranda are included in Appendix C.

### **3.0 CORRECTIVE ACTION ACTIVITIES COMPLETED DURING QUARTER**

This section describes the corrective action activities conducted at the Facility during the fourth quarter of 2017. Operation of the SVE systems at the SWMU-172/174 area and the Building 4-78/79 SWMU/AOC Group continued during the fourth quarter. Quarterly compliance monitoring was also conducted in accordance with the Second Addendum to the Compliance Monitoring Plan (Amec Foster Wheeler, 2017a).

#### **3.1 SWMU-168**

SWMU-168 is monitored semiannually during the first and third quarters; therefore, no monitoring was conducted for this area during the fourth quarter of 2017.

#### **3.2 SWMU-172 AND SWMU-174**

This section describes corrective action activities conducted at these two SWMUs. The cleanup remedy for SWMU-172 and SWMU-174 is a combination of bioremediation, SVE, and MA. Figure 1 shows the layout of the groundwater monitoring wells and the remediation system for these SWMUs.

##### **3.2.1 Cleanup Action Activities**

###### ***3.2.1.1 Installation/Construction Activities***

No installation/construction activities were conducted for these SWMUs during the fourth quarter.

###### ***3.2.1.2 Soil Vapor Extraction and Bioremediation Operations***

The SVE system at SWMU-172 and SWMU-174 operated normally during the fourth quarter, until December 15, 2017, when it was shut down. Details for system operations are included in the SVE operations and monitoring report prepared by CALIBRE and included as Appendix D.

##### **3.2.2 Compliance Monitoring Plan Deviations**

No deviations from the compliance monitoring plan occurred for this area during the fourth quarter.

##### **3.2.3 Water Levels**

Groundwater elevations for the SWMU-172 and SWMU-174 area measured during the fourth quarter 2017 are summarized in Table 1 and shown on Figure 1. The contoured data for November 2017 show that groundwater generally flows east from SWMU-172 and SWMU-174 toward the Cedar River Waterway, with an approximate horizontal gradient of 0.01.

### 3.2.4 Groundwater Monitoring Results

Groundwater in this area is monitored following the schedules presented in Tables A-1 and A-2 in Appendix A. Results for primary geochemical indicators are presented in Table 2; results for the SWMU-172 and SWMU-174 area COCs are presented in Table 3.

#### 3.2.4.1 Monitored Attenuation/Geochemical Indicators

The geochemical indicator results are presented in Table 2. TOC concentrations ranged from 1.03 milligrams per liter (mg/L) to 11.3 mg/L for all SWMU-172 and SWMU-174 monitoring wells. The other natural attenuation parameter results indicate that geochemical conditions were generally uniform and appropriate for reductive dechlorination of chlorinated volatile organic compounds (VOCs). The pH in all monitoring wells were near neutral. The oxidation reduction potential (ORP) and dissolved oxygen (DO) results indicate reducing conditions were present.

#### 3.2.4.2 COC Results for Source and Downgradient Plume Areas

Table 3 lists fourth quarter 2017 analytical results for the SWMU-172 and SWMU-174 COCs. Figures 2 and 3 show historical trend plots for tetrachloroethene (PCE), trichloroethene (TCE), vinyl chloride (VC), and *cis*-1,2-dichloroethene (*cis*-1,2-DCE) in source area wells GW152S and GW153S, and in downgradient plume area wells GW172S and GW173S. Flow generally moves from the vicinity of source area well GW152S to downgradient plume area well GW172S, and from source area well GW153S to downgradient plume area well GW173S. PCE and TCE are the chlorinated solvents that were used at the Facility, and *cis*-1,2-DCE and VC are breakdown products resulting from biodegradation processes.

As shown in Table 3, *cis*-1,2-DCE, TCE, PCE, and VC concentrations exceeded the CULs in the groundwater collected from both source area and downgradient plume area wells. As shown in Figure 2, the concentrations of COCs in groundwater from source area wells have continued to generally decrease since the substrate injections were completed during the second quarter of 2016, except for PCE in groundwater collected from source area well GW152S, which increased during the fourth quarter. As shown in Figure 3, COC concentrations increased in the groundwater sample collected from downgradient plume area well GW172S during the third quarter, but overall, COC concentrations have decreased over time. Decreasing COC concentrations are also observed in groundwater from GW173S.

Arsenic was detected above the CUL in all source area and downgradient plume area wells. As shown in Figure 4, the arsenic concentrations in the groundwater from both source area and downgradient wells decreased during the fourth quarter sampling event. Copper was detected at

concentration above the CUL in the groundwater from downgradient wells GW173S and GW226S, and lead was detected above the CUL in the groundwater from source area well GW152S and in downgradient plume area wells GW172S and GW173S. The observed variations for metals concentrations are influenced by the naturally occurring reducing conditions and potentially by the conditions created to support reductive dechlorination of the chlorinated solvents. Additional evaluations of metals will be performed during the First Quarter 2018 sampling event to compare total and dissolved concentrations of arsenic in groundwater with the local and/or regional naturally occurring background concentrations of arsenic in groundwater. Arsenic occurs naturally in soil and groundwater; and is known to be regionally elevated; therefore, evaluations of total and dissolved arsenic in background concentrations may be warranted. Additionally, as site COCs are dropped it may be appropriate to re-evaluate CULs based on the total risk which could result in an arsenic CUL adjustment.

### **3.2.4.3 COC Results for Conditional Point of Compliance Area**

Results from the CPOC area wells are presented in Table 3 and trend charts for cis-1,2-DCE, TCE, and VC for all CPOC area wells are presented in Figure 5. As shown in Table 3, cis-1,2-DCE was detected at concentrations above the CUL, ranging from 0.0352 to 0.519 micrograms per liter ( $\mu\text{g/L}$ ) in the groundwater collected from all CPOC area wells; TCE was detected above the CUL in the groundwater from monitoring well GW235I; and VC was detected above the CUL in the groundwater from monitoring well GW232S. Concentrations of VC in well GW232S are expected to decrease over time, as concentrations in the immediate upgradient well GW173S continue to decrease. One option under consideration would be to convert GW173S to an injection well to more rapidly reduce VOCs at this location. PCE was not detected in the groundwater collected from the CPOC wells and is not shown in Figure 5. As shown on Figure 5, concentrations of cis-1,2-DCE have exceeded the CUL in the CPOC wells since compliance monitoring began, but are generally stable, except for the slight increase in concentration observed in the groundwater from GW232S. TCE and PCE concentrations exceed the CUL in the groundwater from CPOC wells GW235I and GW232S, respectively, and generally appear to be stable.

Arsenic was detected above the CUL in the groundwater from CPOC area wells GW232S, GW234S, and GW236S. Copper was detected above the CUL in the groundwater from monitoring well GW234S. Lead was detected above the CUL in the groundwater from monitoring wells GW234S and GW236S (Table 3). Figure 6 shows arsenic, copper, and lead trends since the beginning of compliance monitoring in groundwater from CPOC wells. As shown in Figure 6, though arsenic, copper and lead concentrations appear to vary over time, there are no increasing trends in the groundwater collected from CPOC wells.

### **3.3 BUILDING 4-78/79 SWMU/AOC GROUP**

This section describes corrective action activities conducted at the Building 4-78/79 SWMU/AOC Group during the fourth quarter of 2017. The cleanup remedy for this SMWU/AOC group is bioremediation, SVE, MNA, and MA. Figure 7 shows the location of groundwater monitoring wells, bioremediation wells, and SVE wells for this area.

#### **3.3.1 Cleanup Action Activities**

##### ***3.3.1.1 Installation/Construction Activities***

Five injection wells were installed on October 5, 2017 (B78-17, B78-18, B78-19, B78-20, and B78-21). All work was performed in accordance with the Tech Memo submitted to Ecology in September 2017.

##### ***3.3.1.2 Soil Vapor Extraction and Bioremediation Operations***

The SVE system at the Building 4-78/79 SWMU/AOC Group was in normal operation during the fourth quarter until December 15, 2017, when it was shut down. Details for system operations are included in the SVE operations and monitoring report prepared by CALIBRE and included as Appendix D.

#### **3.3.2 Compliance Monitoring Plan Deviations**

No deviations from the compliance monitoring plan occurred for this area during the fourth quarter.

#### **3.3.3 Water Levels**

Table 4 presents the groundwater elevations measured during the fourth quarter 2017 groundwater monitoring event at the Building 4-78/79 SWMU/AOC group. As shown in Figure 7, the observed direction of groundwater flow from the source area during November 2017 is generally to the west, with a hydraulic gradient of 0.001.

#### **3.3.4 Groundwater Monitoring Results**

Results for primary geochemical indicators are presented in Table 5; results for the COCs for Building 4-78/79 SWMU/AOC Group are presented in Table 6. Groundwater at this area is monitored following the schedule presented in Tables A-1 and A-2 in Appendix A.

##### ***3.3.4.1 Natural Attenuation/Geochemical Indicators***

The geochemical indicator results are presented in Table 5. In general, source area, downgradient, and CPOC area wells had low levels of DO and ORP, indicating that reducing conditions are present over the area and are generally favorable for reductive dechlorination of chlorinated VOCs. The pH in all monitoring wells was above 6.0 standard units during the fourth quarter monitoring period. Results

for the other primary geochemical indicators were fairly consistent throughout this area. TOC concentrations in source area wells ranged from 4.03 to 16.2, indicating that additional substrates injections would be beneficial for continued enhanced bioremediation.

### **3.3.4.2 COC Results for Source and Downgradient Plume Areas**

Table 6 lists fourth quarter 2017 analytical results for the Building 4-78/79 SWMU/AOC Group COCs. The CULs established in the CAP are also presented on Table 6. Figures 8 and 9 are trend charts showing historical trends for COCs for four groundwater monitoring wells that have a history of frequent detections. Trend charts have not been prepared for groundwater monitoring wells or COCs that do not have a history of frequent detections.

As shown in Table 6, benzene, *cis*-1,2-DCE, TCE, and VC were detected in groundwater samples from several source area wells at concentrations above their respective CULs, except for groundwater from source area wells GW034S and GW039S, which had concentrations below CULs for all COCs. Total petroleum hydrocarbons in the gasoline range (TPH-G) was detected in the groundwater from source area well GW031S, at a concentration of 3,040 µg/L (the field duplicate concentration was 2,940 µg/L). TPH-G was also detected in the groundwater from source area wells GW033S and GW243I, at concentrations below the CUL.

Benzene was detected at a concentration of 8.45 µg/L in the groundwater collected from downgradient plume area well GW210S and VC was detected in the groundwater collected from downgradient plume area wells GW038S and GW209S at concentrations of 0.25 µg/L and 0.26 µg/L, respectively. Benzene has been sporadically detected in the groundwater samples from GW210S and the concentration observed during the fourth quarter is consistent with historical concentrations of benzene in the groundwater from this well. The remaining COCs were below detection in the groundwater collected from downgradient plume area wells.

Figure 8 shows trends for selected COCs for source area wells GW031S and GW033S and Figure 9 shows trends for selected COCs for source area well GW034S and downgradient plume area well GW209S. COC concentrations in the groundwater collected from GW031S are generally consistent with historical results and trends. While the concentrations of TCE and benzene in the groundwater collected from source area well GW033S are generally consistent with historical results, the concentrations of *cis*-1,2-DCE and VC have continued the increasing trend first observed in the first quarter 2017 sampling event. Groundwater samples from GW033S historically had the highest concentrations of *cis*-1,2-DCE and VC prior to the Duct Bank dewatering project. COC concentrations in groundwater samples collected from source area well GW034S (Figure 9) are stable. Nitrate and

sulfate injections described in Appendix D are continuing to be performed to address elevated benzene present between GW210S and GW031S.

Figure 9 shows a trend chart for downgradient plume area well GW209S, which was installed in 2008 and is located west of Building 4-79. Monitoring results for benzene and VC for GW209S decreased in 2015 and have remained low through the fourth quarter 2017 monitoring event, with VC detected at a concentration equal to the reporting limit and all other COCs below reporting limits.

### **3.3.4.3 COC Results for Conditional Point of Compliance Area**

Groundwater monitoring results from the fourth quarter for the CPOC area are summarized in Table 6. Trends for CPOC wells GW143S, GW237S and GW240D are shown in Figures 10 through 12. Benzene was detected above the CUL in GW237S at a concentration of 2.88 µg/L in the groundwater sample from CPOC well GW237S; all other benzene results for the CPOC area were below detection. As shown in Figure 11, benzene has been sporadically detected in the groundwater from CPOC well GW237S and has not been detected in the groundwater samples from any other CPOC wells at concentrations above the CUL. The only other COCs detected in the groundwater samples from the CPOC area during the fourth quarter was TPH-G at a concentration of 1,780 µg/L in the groundwater sample from CPOC well GW237S and *cis*-1,2-DCE at 0.23 µg/L in well GW143S. As shown in Figure 12, TPH-G has been detected in the groundwater sample from CPOC GW237S well at sporadic concentrations since the fourth quarter of 2015.

## **3.4 FORMER FUEL FARM AOC GROUP**

The Former Fuel Farm AOC group is monitored semiannually in May and November. The fourth quarter 2017 monitoring event is the sixth monitoring event since the start of compliance monitoring. The final remedy for the Former Fuel Farm is MNA.

### **3.4.1 Cleanup Action Activities**

No installation/construction activities were conducted for this cleanup action area during the fourth quarter.

### **3.4.2 Compliance Monitoring Plan Deviations**

No deviations from the compliance monitoring plan occurred for this area during the fourth quarter.

### **3.4.3 Water Levels**

Groundwater elevations for the Former Fuel Farm AOC Group measured during the fourth quarter 2017 are summarized in Table 7 and shown on Figure 13. Groundwater elevation contours are not shown on Figure 13 due to anomalous measurements.

### **3.4.4 Groundwater Monitoring Results**

Results for primary geochemical indicators are presented in Table 8; results for COCs for the Former Fuel Farm AOC Group are presented in Table 9. Groundwater in this area is monitored following the schedule presented in Tables A-1 and A-2 in Appendix A.

#### ***3.4.4.1 Monitored Natural Attenuation Indicators***

The geochemical indicator results are presented in Table 8. Results in Table 8 indicate that geochemical conditions are generally consistent throughout the Former Fuel Farm AOC Group. The pH in CPOC area wells GW212S and GW224S was below 6.0 standard units; low pH may interfere with biological degradation of site COCs. The other geochemical indicators indicate that conditions are generally conducive to natural attenuation of the COCs for the Former Fuel Farm AOC Group.

#### ***3.4.4.2 COC Results for Source Area***

Table 9 lists fourth quarter 2017 analytical results for the Former Fuel Farm AOC Group COCs. The CULs established in the CAP are also presented on Table 9. As shown in Table 9, TPH in the diesel and Jet A ranges was not detected above the reporting limit in the groundwater from source area well GW255S.

#### ***3.4.4.3 COC Results for Conditional Point of Compliance Area***

CPOC area monitoring results are presented in Table 9. Figure 14 shows trend data for CPOC area wells GW211S, GW221S, and GW224S. Table 9 shows that COC concentrations were below their respective CULs for all CPOC area wells except GW211S, GW221S, and GW224S. Diesel range organics exceeded the CUL in the groundwater collected from all three wells and Jet A range petroleum hydrocarbons exceeded the CUL in the groundwater from CPOC wells GW221S and GW224S. Figure 14 shows that the fourth quarter results for these wells are consistent with the historical monitoring results since late 2013, except for the concentrations in the groundwater from CPOC well GW221S.

## **3.5 AOC-001 AND AOC-002**

This section describes corrective action activities conducted at these AOCs during the fourth quarter of 2017. The cleanup remedy for this corrective action area is bioremediation and MA. Bioremediation

commenced for this area in late 2004, following source area excavation. Figure 15 shows the location of groundwater monitoring wells and the bioremediation injection system for AOC-001 and AOC-002, as well as the groundwater elevations measured during this monitoring event.

### **3.5.1 Cleanup Action Activities**

No installation/construction activities were conducted for this cleanup action area during the fourth quarter.

### **3.5.2 Compliance Monitoring Plan Deviations**

No deviations from the compliance monitoring plan occurred for this area during the fourth quarter.

### **3.5.3 Water Levels**

Table 10 presents the groundwater elevations measured during the fourth quarter 2017 monitoring event at AOC-001 and AOC-002. Figure 15 shows the groundwater elevations from this event. Groundwater flow directions cannot be determined from the available groundwater elevation data.

### **3.5.4 Groundwater Monitoring Results**

Groundwater in this area is monitored following the schedule presented in Tables A-1 and A-2 in Appendix A. Results for primary geochemical indicators are presented in Table 11; results for the AOC-001 and AOC-002 COCs are presented in Table 12.

#### ***3.5.4.1 Monitored Attenuation/Geochemical Indicators***

The geochemical indicator results are presented in Table 11. The pH was near neutral in all CPOC wells and is conducive to microbial activity. Table 11 also suggests that geochemical conditions are appropriate for reductive dechlorination of the COCs in the AOC-001 and AOC-002 CPOC area, as indicated by the reducing conditions, low DO levels, and generally appropriate TOC concentrations.

#### ***3.5.4.2 COC Results for Source and Downgradient Plume Areas***

Source area and downgradient wells are monitored semiannually in March and August; therefore, no monitoring for source area or downgradient plume wells was conducted in the fourth quarter.

#### ***3.5.4.3 COC Results for Conditional Point of Compliance Area***

As shown in Table 12, 1,1-dichloroethene, benzene, and TCE concentrations in the groundwater samples collected from CPOC wells were either below detection or below the CUL. Concentrations of *cis*-1,2-DCE and VC were above the CUL in the groundwater samples from all CPOC area wells except for GW194S and GW245S. Concentrations of *cis*-1,2-DCE in groundwater from the CPOC

wells ranged from 0.0352 µg/L to 0.510 µg/L, all greater than the CUL of 0.02 µg/L. VC was detected above the CUL of 0.05 µg/L at concentrations ranging from 0.0582 to 0.461 µg/L.

As shown in Figure 16, aside from the increase in concentrations of *cis*-1,2-DCE and VC observed in the in the groundwater samples collected from GW185S in the second and third quarters of 2016; concentrations of *cis*-1,2-DCE and VC in the CPOC area monitoring wells have been generally stable since compliance monitoring began. COPC area wells GW194S and GW245S are not shown on Figure 16 because COCs are generally not detected in the groundwater samples from these wells. Similarly, the remaining COCs are generally below the CUL in the CPOC area monitoring wells and are not included on Figure 16.

### **3.6 AOC-003**

This section describes corrective action activities conducted at AOC-003 for the fourth quarter of 2017. The cleanup remedy for this AOC is bioremediation and MA. Figure 17 shows the location of groundwater monitoring and bioremediation wells at AOC-003, as well as the groundwater elevations measured during this monitoring event.

#### **3.6.1 Cleanup Action Activities**

No installation/construction activities were conducted for this cleanup action area during the fourth quarter.

#### **3.6.2 Compliance Monitoring Plan Deviations**

No deviations from the compliance monitoring plan occurred for this area during the fourth quarter.

#### **3.6.3 Water Levels**

Table 13 presents the groundwater elevations measured during the fourth quarter 2017 monitoring event at AOC-003 and AOC-092. Figure 17 shows the groundwater elevations from this event. Groundwater flow directions cannot be determined from the available groundwater elevation data.

#### **3.6.4 Groundwater Monitoring Results**

Groundwater at AOC-003 is monitored following the schedule presented in Tables A-1 and A-2 in Appendix A. Results for geochemical indicators are presented in Table 14; results for the AOC-003 COCs are presented in Table 15.

#### **3.6.4.1 Monitored Attenuation//Geochemical Indicators**

The geochemical indicator results are presented in Table 14. Results in Table 14 indicate that geochemical conditions are generally consistent throughout this AOC. The data indicate that conditions are generally conducive to biodegradation of the COCs for this AOC.

#### **3.6.4.2 COC Results for Source and Downgradient Plume Areas**

Source area and downgradient wells are monitored semiannually in March and August; therefore, no monitoring for source area or downgradient plume wells was conducted in the fourth quarter.

#### **3.6.4.3 COC Results for Conditional Point of Compliance Area**

Groundwater collected from the two CPOC monitoring wells did not have detections of PCE, TCE or *cis*-1,2-DCE above their respective CULs. VC was detected at concentrations above the CUL in the groundwater samples collected from CPOC wells GW247S and GW248I, at concentrations of 0.489 and 0.671 µg/L, respectively.

### **3.7 AOC-004**

AOC-004 is monitored semiannually during the first and third quarters; therefore, no monitoring was conducted for this area during the fourth quarter of 2017.

### **3.8 AOC-034 AND AOC-035**

This section describes corrective action activities conducted at AOC-034 and AOC-035 during the fourth quarter of 2017. The cleanup remedy for these AOCs is MNA. Figure 18 shows the locations of the groundwater monitoring wells at AOC-034 and AOC-035, as well as the groundwater elevations measured during this sampling event.

#### **3.8.1 Cleanup Action Activities**

No construction or operations work was conducted for this AOC during the fourth quarter.

#### **3.8.2 Compliance Monitoring Plan Deviations**

No deviations from the compliance monitoring plan occurred for this area during the fourth quarter.

#### **3.8.3 Water Levels**

Table 16 presents the groundwater elevations measured during the fourth quarter 2017 monitoring event at AOC-034 and AOC-035. Figure 18 shows the groundwater elevation contours based on the groundwater elevations. Based on these contours, groundwater in the vicinity of AOC-034 and

AOC-035 flows to the west-northwest, toward the Cedar River Waterway/Lake Washington, with a horizontal hydraulic gradient of approximately 0.0005.

### **3.8.4 Groundwater Monitoring Results**

Groundwater at this area is monitored following the schedule presented in Tables A-1 and A-2 in Appendix A. Results for geochemical indicators are presented in Table 17; results for COCs are presented in Table 18.

#### ***3.8.4.1 Monitored Natural Attenuation/Geochemical Indicators***

The geochemical indicator results are presented in Table 17. In general, the results indicate uniform conditions are present across this corrective action area and that conditions are conducive to natural attenuation of chlorinated VOCs, as indicated by the pH, ORP, and DO measurements.

#### ***3.8.4.2 COC Results for Source and Downgradient Plume Areas***

Table 18 presents the fourth quarter 2017 analytical results for the AOC-034 and AOC-035 groundwater COCs. Trend charts have not been developed for this area, because the COCs are not commonly detected in the AOC-034 and AOC-035 groundwater monitoring wells. As shown in Table 18, neither *cis*-1,2-DCE nor VC were detected in the groundwater collected from source area well GW217S or cross-gradient plume area well GW216S.

#### ***3.8.4.3 COC Results for Conditional Point of Compliance Area***

Table 18 shows that COC concentrations in groundwater samples from the CPOC area wells were below reporting limits and CULs for the fourth quarter of 2017. This is the sixth consecutive semiannual monitoring event with COC concentrations below CULs in the CPOC area well samples.

### **3.9 AOC-060**

AOC-060 is monitored semiannually during the first and third quarters; therefore, no monitoring was conducted for this area during the fourth quarter of 2017.

### **3.10 AOC-090**

AOC-090 is monitored semiannually during the first and third quarters; therefore, no monitoring was conducted for this area during the fourth quarter of 2017.

### **3.11 BUILDING 4-70 AREA**

The Building 4-70 Area is monitored semiannually during the first and third quarters; therefore, no monitoring was conducted for this area during the fourth quarter of 2017.

### **3.12 LOT 20/FORMER BUILDING 10-71 PARCEL**

This section describes corrective action activities conducted for this area during the fourth quarter 2017. Figure 19 shows the locations of the groundwater monitoring wells and the bioremediation injection system at the Lot 20/Former Building 10-71 Parcel, as well as the groundwater elevations measured during the fourth quarter. The Lot 20/Former Building 10-71 Parcel was not included in the EDR, but was later added to the Compliance Monitoring Plan (Amec Foster Wheeler, 2016a) and has been regularly monitored in conjunction with the Facility corrective action areas. The cleanup remedy for the Lot 20/Former Building 10-71 Parcel is bioremediation and MA. This area is monitored semiannually in the second and fourth quarters, in accordance with Table A-1 in Appendix A.

#### **3.12.1 Cleanup Action Activities**

No construction or operations work was conducted for the Lot 20/Former Building 10-71 Parcel during the fourth quarter.

#### **3.12.2 Water Levels**

The groundwater elevations measured during the fourth quarter at the Lot 20/Former Building 10-71 Parcel are presented in Table 19 and on Figure 19. Groundwater contours are not shown on Figure 19 because the three monitoring wells measured are arranged nearly in a straight line and do not provide enough water level data to prepare contours. Based on the fourth quarter water level measurements, the apparent groundwater flow appears to be generally to the northwest.

#### **3.12.3 Groundwater Monitoring Results**

Results for primary geochemical indicators for groundwater from the Lot 20/Former Building 10-71 Parcel monitoring wells are presented in Table 20; results for COCs for the Lot 20/Former Building 10-71 Parcel monitoring wells are presented in Table 21. Groundwater in this area is monitored following the schedule presented in Tables A-1 in Appendix A.

##### ***3.12.3.1 Monitored Attenuation/Geochemical Indicators***

The geochemical indicator results are presented in Table 20. The pH in groundwater from the Lot 20/Former Building 10-71 Parcel monitoring wells was near neutral and the remaining parameters appear uniform in the groundwater samples collected from these monitoring wells.

##### ***3.12.3.2 COC Results***

Fourth quarter analytical results for the Lot 20/Former Building 10-71 Parcel COCs are presented in Table 21. The concentrations of all of the COCs—*cis*-1,2-DCE, toluene, TCE, and VC—in the

groundwater samples collected from Lot 20/Former Building 10-71 Parcel monitoring wells were below detection.

### **3.13 APRON A AREA**

This section describes corrective action activities conducted at the Apron A area during the fourth quarter 2017. The cleanup remedy proposed for the Apron A area is bioremediation and MA. Figure 20 shows the locations of the groundwater monitoring wells in the Apron A area.

#### **3.13.1 Cleanup Action Activities**

No construction or operations work was conducted in the Apron A area during the fourth quarter.

#### **3.13.2 Water Levels**

The depth to groundwater measured during the fourth quarter at Apron A are presented in Table 22 and on Figure 20. Groundwater elevations are not available because the top of casing elevations were never surveyed.

#### **3.13.3 Groundwater Monitoring Results**

Results for primary geochemical indicators for groundwater from groundwater monitoring wells GW262S and GW264S are presented in Table 23; results for COCs from these wells are presented in Table 24. Groundwater in this area is monitored following the schedule presented in Tables A-1 and A-2 in Appendix A.

##### ***3.13.3.1 Monitored Attenuation/Geochemical Indicators***

Geochemical parameters are presented in Table 23. TOC concentrations in the monitoring wells were slightly elevated during the fourth quarter 2017 monitoring event. The other primary geochemical indicators show that reducing conditions were present and that conditions were conducive to biological degradation of the chlorinated VOCs.

##### ***3.13.3.2 COC Results***

Table 24 lists fourth quarter analytical results for the Apron A COCs: *cis*-1,2-DCE and VC. *Cis*-1,2-DCE was not detected in the groundwater samples collected from either GW262S or GW264S. VC was detected in the groundwater samples collected from monitoring well GW264S at a concentration of 0.97 µg/L. The reporting limits reported for monitoring well GW262S were elevated. The laboratory stated that a dilution was performed due to sample foaming.

Abbreviations

µg/L = micrograms per liter  
CPOC = conditional point of compliance

**TABLE 19**

**LOT 20/FORMER BUILDING 10-71 PARCEL  
GROUNDWATER ELEVATION DATA**

**NOVEMBER 14, 2017**

Boeing Renton Facility

Renton, Washington

<b>Well ID</b>	<b>Screen Interval Depth (feet bgs)</b>	<b>TOC Elevation (feet) <sup>1</sup></b>	<b>Depth to Groundwater (feet below TOC)</b>	<b>Groundwater Elevation (feet) <sup>1</sup></b>
10-71-MW-1	7 to 17	30.07	8.33	21.74
10-71-MW-2	7 to 17	29.88	8.60	21.28
10-71-MW-3	5 to 15	29.13	NM	NM
10-71-MW-4	6 to 16	28.97	8.42	20.55

Notes

1. Elevations in feet relative to National Geodetic Vertical Datum of 1929.

Abbreviations

bgs = below ground surface

NM = not measured

TOC = top of casing

**TABLE 20**

**LOT 20/FORMER BUILDING 10-71 PARCEL  
PRIMARY GEOCHEMICAL INDICATORS<sup>1</sup>**

**NOVEMBER 14, 2017**

Boeing Renton Facility

Renton, Washington

	Well ID		
	10-71-MW1	10-71-MW2	10-71-MW4
Specific Conductivity ( $\mu\text{S}/\text{cm}$ )	223	232	331
Dissolved Oxygen (mg/L)	0.25	0.18	0.33
Oxidation/Reduction Potential (mV)	72.9	61.8	57.6
pH (standard units)	6.12	6.18	6.21
Temperature (degrees C)	13.81	15.49	14.41

Notes

1. Primary geochemical indicators are measured in the field.

Abbreviations

$\mu\text{S}/\text{cm}$  = microsiemens per centimeter  
CPOC = conditional point of compliance  
degrees C = degrees Celsius  
mg/L = milligrams per liter  
mV = millivolts

**TABLE 21**

Apron A		X (2,4)	NA	GW262S and GW264S	NA	NA		<i>cis</i> -1,2-DCE and VC	SW8260C <sup>6</sup>

Notes:

- The EDR presents the groundwater monitoring frequency for each SWMU/AOC. For sites with semiannual monitoring frequency, specific quarters when monitoring will be conducted is indicated by 1 for quarter 1, 2 for quarter 2, etc.
- Groundwater monitoring wells are also monitored for groundwater levels.
- Additional wells are monitored for groundwater levels only.
- In addition to COCs, primary geochemical indicators will be monitored during each regular monitoring event. Geochemical indicators are listed in Table A-2.
- Details of analytical methods are specified in the Quality Assurance Project Plan, which is Appendix E to the Cleanup Action Plan (AMEC, 2012).
- SIM methods will be used if the cleanup level is lower than the reporting limit achieved by the conventional 8021, 8260 or 8270 method. If cleanup levels become higher or if the conventional 8021, 8260 or 8270 methods are updated and able to achieve reporting limits below the cleanup levels, then the conventional method rather than the SIM method will be used.
- GW228S will not be monitored on a semiannual basis - only the CPOC wells will be monitored on a semiannual basis for SWMU-168.

Abbreviations:

AOC = area of concern	PCE = tetrachloroethene
<i>cis</i> -1,2-DCE = <i>cis</i> -1,2 dichloroethene	SIM = selected ion monitoring
COCs = constituents of concern	SWMU = solid waste management unit
CPOC = conditional point of compliance	TCE = trichloroethene
Cr = chromium	TPH = total petroleum hydrocarbons
EDR = Engineering Design Report	<i>trans</i> -1,2-DCE = <i>trans</i> -1,2 dichloroethene
EPA = Environmental Protection Agency	VC = vinyl chloride
NA = not applicable	VOCs = volatile organic compounds

Boeing Renton Facility  
Renton, Washington

Cleanup Action Area	Groundwater Monitoring Wells				Primary Geochemical Parameters <sup>2</sup>		
	Cross-Gradient Wells	Source Area Wells	Downgradient Plume Wells	CPOC Wells	Indicators	Monitoring Frequency <sup>3</sup>	
						Quarterly	Semiannual
SWMU-168	NA	GW228S <sup>4</sup>	NA	GW229S, GW230I, and GW231S	Dissolved oxygen, pH, ORP, temperature, specific conductance		X (1,3)
SWMU-172/SWMU-174	NA	GW152S and GW153S	GW081S, GW172S, GW173S, and GW226S	GW232S, GW233I, GW234S, GW235I, and GW236S	Dissolved oxygen, pH, ORP, temperature, specific conductance, TOC	X	
Building 4-78/79 SWMU/AOC Group	NA	GW031S, GW033S, GW034S, GW039S, GW243I, and GW244S	GW038S, GW209S, and GW210S	GW143S, GW237S, GW238I, GW239I, GW240D, GW241S, and GW242I	Dissolved oxygen, pH, ORP, temperature, specific conductance in all wells, TOC in all wells except GW241S and GW242I	X	
Former Fuel Farm SWMU/AOC Group	NA	GW255S, GW256S, and GW257S	NA	GW183S, GW184S, GW211S, GW212S, GW221S, GW224S, and GW258S	Dissolved oxygen, pH, ORP, temperature, specific conductance		X (2,4)
AOC-001/AOC-002	NA	GW193S	GW190S, GW191D, GW192S, and GW246S	GW185S, GW194S, GW195S, GW196D, GW197S, and GW245S	Dissolved oxygen, pH, ORP, temperature, specific conductance, TOC	X (CPOC wells)	X (1,3) (all other wells)
AOC-003	NA	GW249S	GW188S	GW247S and GW248I	Dissolved oxygen, pH, ORP, temperature, specific conductance, TOC	X (CPOC wells)	X (1,3) (all other wells)
AOC-004	NA	GW250S	NA	GW174S	Dissolved oxygen, pH, ORP, temperature, specific conductance		X (1,3)
AOC-034/AOC-035	GW216S	GW217S	NA	GW218S and GW251S	Dissolved oxygen, pH, ORP, temperature, specific conductance		X (2,4)
AOC-060	GW012S and GW014S	GW009S	GW147S	GW149S, GW150S, GW252S, GW253I, and GW254S	Dissolved oxygen, pH, ORP, temperature, specific conductance, TOC		X (1,3)
AOC-090	NA	GW189S	GW175I and GW176S	GW163I, GW165I, GW177I, GW178S, GW179I, GW180S, GW207S, and GW208S	Dissolved oxygen, pH, ORP, temperature, specific conductance, TOC <sup>5</sup>		X (1,3)
Building 4-70 Area	NA	NA	NA	GW259S and GW260S	Dissolved oxygen, pH, ORP, temperature, specific conductance, TOC		X (1,3)
Apron A	NA	GW262S and GW264S	NA	NA	Dissolved oxygen, pH, ORP, temperature, specific conductance, TOC		X (2,4)

**Notes:**

- In addition to COCs listed in Table A-1, primary geochemical indicators will be monitored during each regular monitoring event.
- All primary geochemical indicators except TOC are monitored in the field during sampling. TOC is analyzed in the laboratory following methods specified in the Quality Assurance Project Plan, which is Appendix E to the Cleanup Action Plan (AMEC, 2012).  
The primary geochemical indicators differ slightly depending on whether the site is a fuel-related site or a solvent-related site.  
At a fuel related site, TOC is not necessary; at a solvent-related site, TOC is a measure of how much electron donor remains present.
- The EDR presents the groundwater monitoring frequency for each SWMU/AOC. For sites with semiannual monitoring frequency, specific quarters when monitoring will be conducted is indicated by 1 for quarter 1, 2 for quarter 2, etc.
- Primary geochemical parameters will not be collected at GW228S - only at CPOC wells that are sampled semiannually.

**Abbreviations:**

AOC = area of concern  
COCs = constituents of concern  
CPOC = conditional point of compliance  
EDR = Engineering Design Report  
NA = not applicable  
ORP = oxidation reduction potential  
SWMU = solid waste management unit  
TOC = total organic carbon

**APPENDIX C**

Data Validation Memos

Data were reviewed in accordance with the appropriate method procedures and criteria documented in the Quality Assurance Project Plan (QAPP) (Amec Foster Wheeler, 2016). The control limits provided in the QAPP are advisory limits; therefore, the most current control limits provided by the laboratory were used to evaluate the quality control data. In cases where the laboratory did not track limits for an analyte, the limits in the QAPP were used.

Holding times, method/trip blanks, surrogate recoveries, laboratory control samples (LCS) and laboratory control sample duplicates (LCSD), matrix spike/matrix spike duplicates (MS/MSD), field duplicates, and reporting limits were reviewed where available to assess compliance with applicable methods. If qualification was required, data were qualified based on the definitions and use of qualifying flags outlined in the EPA guidance documents (EPA, 2014a and b).

ARI received the samples on November 14, 2017. The temperatures of the coolers were recorded upon receipt and were below the maximum acceptable temperature of 6 degrees Celsius (°C).

**ORGANIC ANALYSES**

Samples were analyzed for VOCs. Laboratory data were evaluated for the following parameters:

1. Preservation and Holding Times – Acceptable
2. Blanks – Acceptable
3. Surrogates – Acceptable
4. LCS/LCSD – Acceptable
5. MS/MSD – Acceptable
6. Field Duplicates – Acceptable

One field duplicate was submitted for each analysis during this sampling event, meeting the project frequency requirement of five percent, or one for every 20 samples. Primary and duplicate results are summarized in the table below. The project-specific control limit for field duplicate relative percent differences (RPDs) is 30 percent for concentrations greater than five times the reporting limit. The RPD is not calculated for results that are less than five times the reporting limit, as indicated on the table below by “NC.” In these cases, the absolute value of the difference between the primary and duplicate result should not exceed the value of the reporting limit. The field duplicate RPDs were within the control limits.

Sample ID/ Field Duplicate ID	Analyte	Primary Result (ng/L)	Duplicate Result (ng/L)	Reporting Limit (ng/L)	RPD (%)
RGW152-171113/ RGWDUP-171113	vinyl chloride	44.9	40.9	20	NC
	cis-1,2-dichloroethene	203	188	20	8
	trichloroethene	146	149	20	2
	tetrachloroethene	529	589	20	11

Notes  
 ng/L = nanograms per liter  
 NC = not calculated  
 RPD= relative percent difference

7. Reporting Limits and Laboratory Flags – Acceptable except as noted:

The vinyl chloride results in samples RGW232S-171113, RGWDUP1-171113, RGW172S-171113, RGW152S-171113, RGW226S-171113, and RGW173S-171113 were flagged with an “M” by the laboratory to indicate that the results were estimated values detected and confirmed by an analyst but with a low spectral match. The results are reported as estimated and flagged with a “J.”

**INORGANIC ANALYSES**

Samples were analyzed for total metals and TOC. Laboratory data were evaluated for the following parameters:

1. Preservation and Holding Times – Acceptable
2. Blanks – Acceptable
3. LCS – Acceptable except as noted:
4. MS/MSD – Acceptable
5. Laboratory Duplicates – Acceptable
6. Field Duplicates – Acceptable

One field duplicate was submitted for each analysis during this sampling event, meeting the project frequency requirement of five percent, or one for every 20 samples. Primary and duplicate results are summarized in the table below. The project-specific control limit for field duplicate RPDs is 30 percent for concentrations greater than five times the reporting limit. The RPD is not calculated for results that are less than five times the reporting limit, as indicated on the table below by “NC.” In these cases, the absolute value of the difference between the primary and duplicate result should not exceed the value of the reporting limit. The field duplicate RPDs were within the control limits, except for total arsenic, copper, and lead. The results for the affected analytes in samples RGW152S-170508 and RGWDUP-170508 are qualified as estimated and flagged with a “J.”

Sample ID/ Field Duplicate ID	Analyte	Primary Result (µg/L)	Duplicate Result (µg/L)	Reporting Limit (µg/L)	RPD (%)
RGW152S-171113/ RGWDUP-171113	TOC	2.84	2.60	0.50	9
	total arsenic	1.56	1.69	0.200	8
	total copper	2.95	3.14	0.500	6
	total lead	1.54	1.79	0.100	15

Notes

µg/L = micrograms per liter  
 RPD= relative percent difference  
 TOC = total organic carbon

7. Reporting Limits and Laboratory Flags – Acceptable

## OVERALL ASSESSMENT OF DATA

The table below summarizes the data assessment. The completeness of work order number 17K0211 is 100 percent. The usefulness of these data was evaluated based on EPA guidance documents listed in the introduction to this report. Few problems were identified, and analytical performance was generally within specified limits.

Sample ID	Qualified Analyte	Qualified Result	Units	Qualifier Reason
RGW233I-171113	none			
RGW232S-171113	vinyl chloride	621 J	ng/L	flagged "M" by laboratory
RGWDUP1-171113	vinyl chloride	40.9 J	ng/L	flagged "M" by laboratory
RGW236S-171113	none			
RGW235I-171113	none			
RGW234S-171113	none			
RGW172S-171113	vinyl chloride	286 J	ng/L	flagged "M" by laboratory
RGW152S-171113	vinyl chloride	44.9 J	ng/L	flagged "M" by laboratory
RGW226S-171113	vinyl chloride	48.3 J	ng/L	flagged "M" by laboratory
RGW153S-171113	none			
RGW173S-171113	vinyl chloride	70.5 J	ng/L	flagged "M" by laboratory
RGW081S-171113	none			
Trip Blanks	none

**Subject: Summary Data Quality Review**

November 2017 Boeing Renton Groundwater Sampling  
 Building 4-78/79 SWMU/AOC Group  
 ARI Work Order Numbers: 17K0213 and 17K0264

This memo presents the summary data quality review of 17 primary groundwater samples, one field duplicate groundwater sample, and two trip blank samples collected on November 13 and 14, 2017. The samples were submitted to Analytical Resources, Inc. (ARI), located in Tukwila, Washington, a laboratory accredited by the Washington State Department of Ecology (Ecology). The samples were analyzed for the following:

- Volatile organic compounds (VOCs) (limited suite: benzene, vinyl chloride, cis-1,2-dichloroethene, and trichloroethene) by U.S. Environmental Protection Agency (EPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline (TPH-G) by Ecology Method NWTPH-G; and
- Total organic carbon (TOC) by Standard Method (SM) 5310B-00.

The samples and the analyses conducted on the samples are listed below.

<u>Sample ID</u>	<u>Laboratory Sample ID</u>	<u>Requested Analyses</u>
RGW234I-171113	17K0213-01	all
RGW-241S-171113	17K0213-02	all
RGW240D-171113	17K0213-03	all
RGW-242I-171113	17K0213-04	all
RGW143S-171113	17K0213-05	all
RGW238I-171113	17K0213-06	all
RGW033S-171113	17K0213-07	all
RGW237S-171113	17K0213-08	all
RGW209S-171113	17K0213-09	all
RGW039S-171113	17K0213-10	all
RGW034S-171113	17K0213-11	all
RGW243I-171113	17K0213-12	all
RGW038S-171113	17K0213-13	all

<u>Sample ID</u>	<u>Laboratory Sample ID</u>	<u>Requested Analyses</u>
RGW244S-171113	17K0213-14	all
Trip Blanks	17K0213-15	VOCs and TPH-G
RGWDUP2-171114	17K0264-01	all
RGW031S-171114	17K0264-02	all
RGW210S-171114	17K0264-03	all
Trip Blanks	17K0264-04	VOCs

Data were reviewed in accordance with the appropriate method procedures and criteria documented in the Quality Assurance Project Plan (QAPP) (Amec Foster Wheeler, 2016). The control limits provided in the QAPP are advisory limits; therefore, the most current control limits provided by the laboratory were used to evaluate the quality control data. In cases where the laboratory did not track limits for an analyte, the limits in the QAPP were used.

Holding times, method/trip blanks, surrogate recoveries, laboratory control samples (LCS) and laboratory control sample duplicates (LCSD), matrix spike/matrix spike duplicates (MS/MSD), field duplicates, and reporting limits were reviewed where available to assess compliance with applicable methods. If qualification was required, data were qualified based on the definitions and use of qualifying flags outlined in EPA guidelines (EPA, 2014a and b).

ARI received the samples on November 14 and 15, 2017. The temperatures of the coolers were recorded upon receipt and were below the maximum acceptable temperature of 6 degrees Celsius (°C). ARI noted the following upon sample receipt:

- A large air bubble (> than 2 millimeters) was noted in one of three vials submitted for sample RGW240D-171113, a pea-sized bubble (approximately 2 to 4 millimeters) was noted in one of three of three vials submitted analysis of sample RGW238I-171113, and pea-sized bubbles were noted in both of the vials submitted for the trip blank. The laboratory proceeded with analysis using unaffected vials if available or the least affected vials, and sample results are not qualified.

## **ORGANIC ANALYSES**

Samples were analyzed for VOCs and TPH-G. Laboratory data were evaluated for the following parameters:

1. Preservation and Holding Times – Acceptable
2. Blanks – Acceptable
3. Surrogates – Acceptable except as noted:

VOCs by EPA 8260C: The recoveries for one of four surrogates, 1,2-dichloroethane-d4, were 217 and 218 percent, respectively, in the initial analyses of samples RGWDUP2-171114 and RGW031S-171114, greater than the control limits of 80 to 129 percent. The samples were reanalyzed with similar surrogate recoveries. The results are reported from

the initial analysis and the detected results are qualified as estimated, due to the potential high bias. Non-detected results are not qualified.

4. LCS/LCSD – Acceptable
5. MS/MSD – Acceptable
6. Field Duplicates – Acceptable

One field duplicate was submitted for each analysis during this sampling event, meeting the project frequency requirement of five percent, or one for every 20 samples. Primary and duplicate results are summarized in the table below. The relative percent differences (RPDs) for the field duplicate are within the project-specific control limit of 30 percent for concentrations greater than five times the reporting limit. The RPD is not calculated for results that are less than five times the reporting limit, as indicated on the table below by “NC.” In these cases, the absolute value of the difference between the primary and duplicate result should not exceed the value of the reporting limit.

Sample ID/ Field Duplicate ID	Analyte	Primary Result (µg/L)	Duplicate Result (µg/L)	Primary/Duplicate Reporting Limit (µg/L)	RPD (%)
RGW031S-171114/ RGWDUP2-171114	benzene	59.9	59.2	0.2	1
	cis-1,2-dichloroethene	0.47	0.38	0.2	NC
	TPH-G	3,040	2,940	100	3

**Notes**

µg/L = micrograms per liter

NC = not calculated

RPD= relative percent difference

TPH-G = total petroleum hydrocarbons as gasoline

7. Reporting Limits and Laboratory Flags – Acceptable except as noted:

VOCs by EPA 8260C: The laboratory flagged the vinyl chloride and cis-1,2-dichloroethene results in sample RGW033S-171113 with an “E” to indicate the results were greater than the calibration range of the instrument. The samples were diluted and reanalyzed. The “E” flagged results are reported from the diluted analyses and the remaining results are reported from the initial analyses.

**INORGANIC ANALYSES**

Samples were analyzed for TOC. Laboratory data were evaluated for the following parameters:

1. Preservation and Holding Times – Acceptable
2. Blanks – Acceptable
3. LCS – Acceptable
4. MS – Acceptable
5. Laboratory Duplicates – Acceptable
6. Field Duplicates – Acceptable

One field duplicate was submitted for each analysis during this sampling event, meeting the project frequency requirement of five percent, or one for every 20 samples. Primary and duplicate results are summarized in the table below. The RPDs are acceptable.

Sample ID/ Field Duplicate ID	Analyte	Primary Result (mg/L)	Duplicate Result (mg/L)	Reporting Limit (mg/L)	RPD (%)
RGW031S-171114/ RGWDUP2-171114	TOC	14.4	14.8	0.5	3

Notes

mg/L = milligrams per liter  
RPD= relative percent difference  
TOC = total organic carbon

7. Reporting Limits and Laboratory Flags – Acceptable

**OVERALL ASSESSMENT OF DATA**

The table below summarizes the data assessment. The completeness of work order numbers 17K0213 and 17K0264 is 100 percent. Evaluation of the usefulness of these data is based on EPA guidance documents identified in the introduction to this report. Few problems were identified, and analytical performance was generally within specified limits. The data meet the project's data quality objectives.

Sample ID	Qualified Analyte	Qualified Result	Qualifier Reason

**Subject: Summary Data Quality Review**  
November 2018 Boeing Renton Groundwater Sampling  
Former Fuel Farm AOC Group  
ARI Work Order Number: 17K0262

This memo presents the summary data quality review of 11 primary groundwater samples and one field duplicate collected on November 14, 2017. The samples were submitted to Analytical Resources Inc. (ARI), a Washington State Department of Ecology (Ecology)-accredited laboratory located in Tukwila, Washington. The samples were analyzed for total petroleum hydrocarbons as diesel (TPH-D), plus motor oil (TPH-O) and Jet-A (TPH-Jet A) ranges by Ecology Method NWTPH-Dx.

The samples and the analyses conducted on the samples are listed below.

<u>Sample ID</u>	<u>Laboratory Sample ID</u>	<u>Requested Analyses</u>
RGWDUP3-171114	17K0262-01	all
RGW255S-171114	17K0262-02	all
RGW224S-171114	17K0262-03	all
RGW258S-171114	17K0262-04	all
RGW256S-171114	17K0262-05	all
RGW225I-171114	17K0262-06	all
RGW212S-171114	17K0262-07	all
RGW183S-171114	17K0262-08	all
RGW257S-171114	17K0262-09	all
RGW184S-171114	17K0262-10	all
RGW221S-171114	17K0262-11	all
RGW211S-171114	17K0262-12	all

Data were reviewed in accordance with the appropriate method procedures and criteria documented in the Quality Assurance Project Plan (QAPP) (Amec Foster Wheeler, 2016). The control limits provided in the QAPP are advisory limits; therefore, the most current control limits provided by the laboratory were used to evaluate the quality control data. In cases where the laboratory did not track limits for an analyte, the limits in the QAPP were used.

Holding times, method/trip blanks, surrogate recoveries, laboratory control samples (LCS) and laboratory control sample duplicates (LCS), matrix spike/matrix spike duplicates (MS/MSD), field duplicates, and reporting limits were reviewed where available to assess compliance with applicable

methods. If qualification was required, data were qualified based on the definitions and use of qualifying flags outlined in EPA guidelines (EPA, 2014a and b).

ARI received the samples on November 15, 2017. The temperatures of the coolers were recorded upon receipt and were below the maximum acceptable temperature of 6 degrees Celsius (6°C).

**ORGANIC ANALYSES**

Samples were analyzed for TPH-D plus TPH-O and TPH-Jet A ranges. Laboratory data were evaluated for the following parameters:

1. Preservation and Holding Times – Acceptable
2. Blanks – Acceptable
3. Surrogates – Acceptable
4. LCS – Acceptable
5. MS/MSD – Acceptable
6. Field Duplicates – Acceptable

One field duplicate was submitted for each analysis during this sampling event, meeting the project frequency requirement of 5 percent, or one for every 20 samples. Primary and duplicate results are summarized in the table below. The field duplicate relative percent difference (RPD) is within the project-specific control limit of 30 percent for concentrations greater than five times the reporting limit.

Sample ID/ Field Duplicate ID	Analyte	Primary Result (mg/L)	Duplicate Result (mg/L)	Reporting Limit (mg/L)	RPD (%)
RGW224S-171114/ RGWDUP3-171114	DRO C12-C24	1.84	1.72	0.100	7
	TPH JetA C10-C18	1.97	1.72	0.100	14

Notes

mg/L = milligrams per liter  
 DRO = diesel range organics  
 RPD = relative percent difference  
 TPH = total petroleum hydrocarbons

7. Reporting Limits – Acceptable

## OVERALL ASSESSMENT OF DATA

The table below summarizes the data review. The completeness of ARI work order number 17K0262 is 100 percent. Evaluation of the usefulness of these data is based on EPA guidance documents listed in the introduction to this report. Few problems were identified, and analytical performance was generally within specified limits. The data meet the project's data quality objectives.

Sample ID	Qualified Analyte
RGWDUP3-171114	none

<u>Sample ID</u>	<u>Laboratory</u> <u>Sample ID</u>	<u>Requested Analyses</u>
Trip Blanks	17K0272-10	VOCs

Data were reviewed in accordance with the appropriate method procedures and criteria documented in the Quality Assurance Project Plan (QAPP) (Amec Foster Wheeler, 2016). The control limits provided in the QAPP are advisory limits; therefore, the most current control limits provided by the laboratory were used to evaluate the quality control data. In cases where the laboratory did not track limits for an analyte, the limits in the QAPP were used.

Holding times, method/trip blanks, surrogate recoveries, laboratory control samples (LCS) and laboratory control sample duplicates (LCSD), matrix spike/matrix spike duplicates (MS/MSD), field duplicates, and reporting limits were reviewed where available to assess compliance with applicable methods. If qualification was required, data were qualified based on the definitions and use of qualifying flags outlined in the EPA guidance documents (EPA, 2014a and b).

ARI received the samples on November 15, 2017. The temperatures of the coolers were recorded upon receipt and were below the maximum acceptable temperature of 6 degrees Celsius (°C). The laboratory noted the following upon sample receipt:

- A small air bubble (approximately 2 millimeters [mm]) was noted in one of five vials submitted for sample RGWDUP4-171114, three of nine vials submitted for sample RGW248I-171114 had small, pea-size (approximately 2 to 4 mm), and large (>4 mm) bubbles, one of five vials submitted for sample RGW194S-171114 had a small bubble, air bubbles ranging in size from small to large were noted in all five vials submitted for sample RGW185S-171114, air bubbles ranging in size from small to large were noted in three of five vials submitted for sample RGW197S-171114, a large air bubble was noted in one of five vials submitted for sample RGW195S-171114, air bubbles ranging in size from small to large were noted in four of five vials submitted for sample RGW196D-171114, and a large bubble was noted in one of six vials submitted for the trip blank. The laboratory proceeded with analysis using the least affected vials and sample results are not qualified.

## **ORGANIC ANALYSES**

Samples were analyzed for VOCs. Laboratory data were evaluated for the following parameters:

1. Preservation and Holding Times – Acceptable
2. Blanks – Acceptable
3. Surrogates – Acceptable
4. LCS/LCSD – Acceptable
5. MS/MSD – Acceptable
6. Field Duplicates – Acceptable

One field duplicate was submitted for each analysis during this sampling event, meeting the project frequency requirement of five percent, or one for every 20 samples. Primary and

duplicate results were both below detection; therefore, field duplicate relative percent differences could not be calculated.

7. Reporting Limits and Laboratory Flags – Acceptable except as noted:

The vinyl chloride results in samples RGW247S-171114, RGW248I-171114, RGW185S-171114, RGW197S-171114, RGW245S-171114, RGW195S-171114, and RGW196D-171114 were flagged with an “M” by the laboratory to indicate that the results were estimated values detected and confirmed by an analyst but with a low spectral match. The results are reported as estimated and flagged with a “J.”

**INORGANIC ANALYSES**

Samples were analyzed for TOC. Laboratory data were evaluated for the following parameters:

1. Preservation and Holding Times – Acceptable
2. Blanks – Acceptable
3. LCS – Acceptable
4. MS – Acceptable
5. Laboratory Duplicates – Acceptable
6. Field Duplicates – Acceptable

One field duplicate was submitted for TOC analysis during this sampling event, meeting the project frequency requirement of five percent, or one for every 20 samples. Primary and duplicate results are summarized in the table below. The project-specific control limit for field duplicate RPDs is 30 percent for concentrations greater than five times the reporting limit. The field duplicate RPD was within the control limits.

Sample ID/ Field Duplicate ID	Analyte	Primary Result (mg/L)	Duplicate Result (mg/L)	Reporting Limit (mg/L)	RPD (%)
RGW194S-171114/ RGWDUP4-171114	TOC	14.7	14.6	0.50	1

Notes  
 mg/L = milligrams per liter  
 RPD= relative percent difference  
 TOC = total organic carbon

7. Reporting Limits and Laboratory Flags – Acceptable

**OVERALL ASSESSMENT OF DATA**

The table below summarizes the data assessment. The completeness of work order number 17K0272 is 100 percent. The usefulness of these data was evaluated based on EPA guidance documents listed in the introduction to this report. Few problems were identified, and analytical performance was generally within specified limits.

Subject: **Summary Data Quality Review**  
November 2017 Boeing Renton Groundwater Sampling  
AOC-034 and -035  
ARI Work Order Number: 17K0265

This memo presents the summary data quality review of four primary groundwater samples and one trip blank collected on November 14, 2017. The samples were submitted to Analytical Resources, Inc. (ARI), located in Tukwila, Washington, a laboratory accredited by the Washington State Department of Ecology (Ecology). The samples were analyzed for the following:

- Volatile organic compounds (VOCs) (cis-1,2-dichloroethene and vinyl chloride) by U.S. Environmental Protection Agency (EPA) Method 8260C.

The samples and the analyses conducted on the samples are listed below.

<u>Sample ID</u>	<u>Laboratory</u> <u>Sample ID</u>	<u>Requested Analyses</u>
RGW217S-171114	17K0265-01	all
RGW216S-171114	17K0265-02	all
RGW218S-171114	17K0265-03	all
RGW251S-171114	17K0265-04	all
Trip Blank	17K0265-05	all

Data were reviewed in accordance with the appropriate method procedures and criteria documented in the Quality Assurance Project Plan (QAPP) (Amec Foster Wheeler, 2016). The control limits provided in the QAPP are advisory limits; therefore, the most current control limits provided by the laboratory were used to evaluate the quality control data. In cases where the laboratory did not track limits for an analyte, the limits in the QAPP were used.

Holding times, method/trip blanks, surrogate recoveries, laboratory control samples (LCS) and laboratory control sample duplicates (LCSD), matrix spike/matrix spike duplicates (MS/MSD), field duplicates, and reporting limits were reviewed where available to assess compliance with applicable methods. If qualification was required, data were qualified based on the definitions and use of qualifying flags outlined in EPA guidance documents (EPA, 2014).

ARI received the samples on November 15, 2017. The temperature of the cooler was recorded upon receipt and was below the maximum acceptable temperature of 6 degrees Celsius (°C). The laboratory noted the following upon sample receipt:

- A pea-sized bubble (approximately 2 to 4 millimeters [mm]) was noted in one of two vials submitted for the trip blank. The laboratory proceeded with analysis using the unaffected vial and sample results are not qualified.

### ORGANIC ANALYSES

Samples were analyzed for VOCs. Laboratory data were evaluated for the following parameters:

1. Preservation and Holding Times – Acceptable
2. Blanks – Acceptable
3. Surrogates – Acceptable
4. LCS/LCSD – Acceptable
5. MS/MSD – Acceptable

Extra volume was not submitted for project specific MS/MSD analyses. Sample precision is evaluated based on LCS and LCSD recoveries. The MS/MSD project frequency requirement of one MS/MSD for every 20 samples was achieved with extra volume submitted at other sites included in this sampling event.

6. Field Duplicates – Acceptable

Field duplicates were not collected at this site during this sampling event. The project frequency requirement of one field duplicate for every 20 samples was achieved with field duplicate samples collected at other sites included in this sampling event.

7. Reporting Limits and Laboratory Flags – Acceptable

### OVERALL ASSESSMENT OF DATA

The table below summarizes the data review. The completeness of work order number 17K0265 is 100 percent. Evaluation of the usefulness of these data is based on EPA guidance documents referenced in the introduction to this report. Few problems were identified, and analytical performance was generally within specified limits. The data meet the project's data quality objectives.

Sample ID	Qualified Analyte
RGW217S-171114	none
RGW216S-171114	none
RGW218S-171114	none
RGW251S-171114	none
Trip Blank	none

**Subject: Summary Data Quality Review**  
November 2017 Boeing Renton Groundwater Sampling  
Building 10-71 Parcel  
ARI Work Order Number: 17K0266

This memo presents the summary data quality review of three primary groundwater samples and one trip blank sample collected on November 14, 2017. The samples were submitted to Analytical Resources, Inc. (ARI), located in Tukwila, Washington, a laboratory accredited by the Washington State Department of Ecology (Ecology). The samples were analyzed for the following:

- Volatile organic compounds (VOCs) (vinyl chloride, cis-1,2-dichloroethene, trichloroethene, and toluene) by U.S. Environmental Protection Agency (EPA) Method 8260C.

The samples and the analyses conducted on the samples are listed in the table below.

<u>Sample ID</u>	<u>Laboratory Sample ID</u>	<u>Requested Analyses</u>
10-71-MW4-171114	17K0266-01	VOCs
10-71-MW2-171114	17K0266-02	VOCs
10-71-MW1-171114	17K0266-03	VOCs
Trip Blank	17K0266-04	VOCs

Data were reviewed in accordance with the appropriate method procedures and criteria documented in the Quality Assurance Project Plan (QAPP) (Amec Foster Wheeler, 2016). The control limits provided in the QAPP are advisory limits; therefore, the most current control limits provided by the laboratory were used to evaluate the quality control data. In cases where the laboratory did not track limits for an analyte, the limits in the QAPP were used.

Holding times, method/trip blanks, surrogate recoveries, laboratory control samples (LCS) and laboratory control sample duplicates (LCSD), matrix spike/matrix spike duplicates (MS/MSD), field duplicates, and reporting limits were reviewed where available to assess compliance with applicable methods. If qualification was required, data were qualified based on the definitions and use of qualifying flags outlined in EPA guidelines (EPA, 2014).

ARI received the samples on November 15, 2017. The temperature of the cooler was recorded upon receipt and was below the maximum acceptable temperature of 6 degrees Celsius (°C).

## ORGANIC ANALYSES

Samples were analyzed for VOCs. Laboratory data were evaluated for the following parameters:

1. Preservation and Holding Times – Acceptable
2. Blanks – Acceptable
3. Surrogates – Acceptable
4. LCS/LCSD – Acceptable
5. MS/MSD – Acceptable

Extra volume was not submitted for project specific MS/MSD analyses. Sample precision is evaluated based on LCS and LCSD recoveries. The MS/MSD project frequency requirement of one MS/MSD for every 20 samples was achieved with extra volume submitted at other sites included in this sampling event.

6. Field Duplicates – Acceptable

Field duplicates were not collected at this site during this sampling event. The project frequency requirement of one field duplicate for every 20 samples was achieved with field duplicate samples collected at other sites included in this sampling event.

7. Reporting Limits and Laboratory Flags – Acceptable

## OVERALL ASSESSMENT OF DATA

The table below summarizes the data assessment. The completeness of work order number 17K0266 is 100 percent. Evaluation of the usefulness of these data is based on EPA guidance documents listed in the introduction to this report. Few problems were identified, and analytical performance was generally within specified limits. The data are not qualified and meet the project's data quality objectives.

Sample ID	Qualified Analyte
10-71-MW4-171114	none
10-71-MW2-171114	none
10-71-MW1-171114	none
Trip Blank	none

**Subject: Summary Data Quality Review**

November 2017 Boeing Renton Groundwater Sampling  
 Apron A  
 ARI Work Order Number: 17K0267

This memo presents the summary data quality review of two primary groundwater samples and one trip blank sample collected on November 14, 2017. The samples were submitted to Analytical Resources, Inc., (ARI), located in Tukwila, Washington, a laboratory accredited by the Washington State Department of Ecology (Ecology). The samples were analyzed for the following:

- Volatile organic compounds (VOCs) (vinyl chloride and *cis*-1,2-dichloroethene) by U.S. Environmental Protection Agency (EPA) Method 8260C; and
- Total organic carbon (TOC) by Standard Method (SM) 5310B.

The samples and the analyses conducted on the samples are listed below.

<u>Sample ID</u>	<u>Laboratory Sample ID</u>	<u>Requested Analyses</u>
RGW262S-171114	17K0267-01	all
RGW264S-171114	17K0267-02	all
Trip Blank	17K0267-03	VOCs

Data were reviewed in accordance with the appropriate method procedures and criteria documented in the Quality Assurance Project Plan (QAPP) (Amec Foster Wheeler, 2016). The control limits provided in the QAPP are advisory limits; therefore, the most current control limits provided by the laboratory were used to evaluate the quality control data. In cases where the laboratory did not track limits for an analyte, the limits in the QAPP were used.

Holding times, method/trip blanks, surrogate recoveries, laboratory control samples (LCS) and laboratory control sample duplicates (LCSD), matrix spike/matrix spike duplicates (MS/MSD), field duplicates, and reporting limits were reviewed where available to assess compliance with applicable methods. If qualification was required, data were qualified based on the definitions and use of qualifying flags outlined in the EPA guidance documents (EPA, 2014a and b).

ARI received the samples on November 15, 2017. The temperature of the cooler was recorded upon receipt and was below the maximum acceptable temperature of 6 degrees Celsius (°C). The laboratory noted the following upon sample receipt:

- Air bubbles ranging in size from small (approximately 2 millimeters [mm]) to large (>4 mm) were noted in three of three vials submitted for VOC analysis of sample RGW262S-171114, a pea-sized (approximately 2 to 4 mm) bubble was noted in one of three vials submitted for VOC analysis of sample RGW264S-171114, and both vials submitted for the trip blank also had pea-sized bubbles. The laboratory proceeded with analysis using the least impacted vials and sample results are not qualified.

### **ORGANIC ANALYSES**

Samples were analyzed for VOCs. Laboratory data were evaluated for the following parameters:

1. Preservation and Holding Times – Acceptable
2. Blanks – Acceptable
3. Surrogates – Acceptable
4. LCS/LCSD – Acceptable
5. MS/MSD – Acceptable

Extra volume was not submitted for project specific MS/MSD analyses. Sample precision is evaluated based on LCS and LCSD recoveries. The MS/MSD project frequency requirement of one MS/MSD for every 20 samples was achieved with extra volume submitted at other sites included in this sampling event.

6. Field Duplicates – Acceptable

Field duplicates were not collected at this site during this sampling event. The project frequency requirement of one field duplicate for every 20 samples was achieved with field duplicate samples collected at other sites included in this sampling event.

7. Reporting Limits and Laboratory Flags – Acceptable

### **INORGANIC ANALYSES**

Samples were analyzed for TOC. Laboratory data were evaluated for the following parameters:

1. Preservation and Holding Times – Acceptable
2. Blanks – Acceptable
3. LCS – Acceptable

4. MS/MSD – Acceptable

Extra volume was not submitted for project specific MS/MSD analyses. Sample precision is evaluated based on LCS and LCSD recoveries. The MS/MSD project frequency requirement of one MS/MSD for every 20 samples was achieved with extra volume submitted at other sites included in this sampling event.

5. Laboratory Duplicates – Acceptable

6. Field Duplicates – Acceptable

Field duplicates were not collected at this site during this sampling event. The project frequency requirement of one field duplicate for every 20 samples was achieved with field duplicate samples collected at other sites included in this sampling event.

7. Reporting Limits and Laboratory Flags – Acceptable

**OVERALL ASSESSMENT OF DATA**

The table below summarizes the data assessment. The completeness of work order number 17K0267 is 100 percent. The usefulness of these data was evaluated based on EPA guidance documents listed in the introduction to this report. Few problems were identified, and analytical performance was generally within specified limits.

## **1.0 Introduction**

CALIBRE Systems, Inc. (CALIBRE) prepared this Technical Memorandum (Tech Memo) for the Boeing Company to summarize remedial actions implemented at the Boeing Renton Facility in the fourth quarter of 2017 (between October 1 and December 31, 2017). The ongoing remedial actions include:

1. Operation of two soil vapor extraction (SVE) systems located at Solid Waste Management Unit (SWMU) and Area of Concern (AOC) locations designated as SWMU-172/174 and Building 4-78/4-79 SWMU/AOC Group, and;
2. Biological treatment to promote Enhanced Reductive Dechlorination (ERD) of volatile organic compounds (VOCs) in groundwater underway at several AOCs located throughout the Renton Facility and anaerobic biodegradation of benzene by nitrate/sulfate injections at the 4-78/79 Building.

CALIBRE completed the work described in this Tech Memo to support remedial activities described in the Engineering Design Report (EDR), (AMEC, 2014).

### **1.1 Facility Location and Background**

The Boeing Renton Facility is used for assembly of 737 airplanes and is located at the southern end of Lake Washington in Renton, Washington. The location of the Renton Facility and the locations of SWMU-172/174 and Building 4-78/79 within the Facility are shown on Figure 1-1 (SWMU-172/174 and Building 4-78/79 are the locations where the two SVE system are operating). The locations of the other AOCs and SWMUs where groundwater treatment is ongoing are also included in Figure 1-1.

### **1.2 Objectives and Organization**

The objective for this Tech Memo is to summarize work completed in accordance with the EDR in the fourth quarter of 2017. This includes operations and monitoring activities for the SVE systems located at Building 4-78/79 and SWMU-172/174, and a summary of the ongoing biological treatment of groundwater at the following areas:

SWMU-172/174  
Building 4-78/4-79 SWMU/AOC Group (Building 4-78/79)  
AOC-001/002  
AOC-003  
Lot 20/Former Building 10-71  
AOC-060  
AOC-090  
Building 4-70, and  
Apron A

This Tech Memo is organized as follows:

Section 1 – Introduction and Background

Section 2 – SVE System Operation and Monitoring

Section 3 – Recommended Next Steps for the SVE Systems

Section 4 – Groundwater Treatment

Section 5 – Conclusions and Recommendations

Section 6 – References

Attachment A – Field Data Sheets

Attachment B – Laboratory Report

## **2.0 SVE Systems Operation and Monitoring**

SVE systems were installed in the Building 4-78/79 and SWMU-172/174 areas and began operation in April 2015. During the period covered in this report, both systems were operated in a manner consistent with the goals and operating procedures presented in the EDR. The following sections summarize the operating conditions, operational changes, and performance monitoring/evaluation for the SVE systems.

### **2.1 Building 4-79/4-79 SWMU/AOC Group SVE System**

The Building 4-78/79 SVE system consists of 15 vapor extraction wells and a SVE equipment trailer as shown in Figure 2-1. The SVE system is equipped with two vapor-phase granular-activated carbon (GAC) vessels each filled with 1,800 pounds of virgin carbon. The GAC vapor treatment system is configured to run in a lead-lag configuration with vapors from the outlet of the lead vessel passing through the lag vessel. The system also includes two smaller vessels each containing 200 pounds of zeolite impregnated with permanganate to remove and oxidize specific compounds, such as vinyl chloride, that are not efficiently adsorbed by GAC.

Routine maintenance including oil changes, drive-belt tensioning and inspection, inspection of the air filter, and inspection of the moisture separator was completed per the Operations Manual (CALIBRE, 2014). System monitoring includes regular monitoring of total organic vapor concentrations with a calibrated photo-ionization detector (PID), a field instrument, coupled with selected vapor samples submitted for laboratory TO-15 analysis for VOCs.

#### **2.1.1 TO-15 Laboratory Analysis of Vapor Samples**

Four vapor samples were collected from the Building 4-78/79 SVE system for TO-15 analysis on December 8, 2017. The results showed TCE represented approximately 75% of the total VOCs in the air extracted from the SVE system influent sample. Table 2-1 summarizes the TO-15 detections for the Building 4-78/79 SVE system for nine TO-15 sampling events that have been implemented since system startup<sup>1</sup>. The data collected over time indicate that TCE is the primary VOC detected with two exceptions. Total petroleum hydrocarbons in the gasoline range (TPHg) were detected at relatively high concentrations in the Building 4-78/79 system influent in October 2015, and again in September 2016. TPHg was not detected in the current December 2017 sampling event. The samples were analyzed by EuroFins Air Toxics and the laboratory report is included in Attachment B.

---

<sup>1</sup> Multiple changes to SVE system operations have been implemented over the period where data are shown. Changes to extraction flow rates by SVE wells are used to maximize the VOC mass removal and the corresponding SVE influent concentration is highly dependent on the flow rate from selected wells.

### **2.1.2 Summary of Operations and Operational Changes**

CALIBRE was onsite on October 4, 2017 to install the 4-78/79 benzene treatment wells. As a precautionary measure to avoid disrupting utilities, 'air-knifing' was completed by Holt Drilling using a vacuum truck, during which no utilities and no groundwater was encountered to a depth of approximately 6-7 ft below ground surface (bgs), however petroleum odors were observed at three of the new well locations in the shallow subsurface (B78-18, B78-19, and B78-20). An operational change to the Building 4-78/79 SVE system was initiated on October 5, 2017 to focus vapor removal in the area of these new wells. To accomplish this, the bleed valves at SVE wells SVE-10, SVE-11, and SVE-12 (located up gradient on Manifold 3) were opened and the operating valves on all Manifold 3 wells were closed. At Manifold 2 the operating valves at SVE wells SVE-7 and SVE-8, located in the area of the new benzene treatment wells, were opened 100% along with the primary valve controlling Manifold 2. The remaining wells on Manifold 2 were closed. The primary valve controlling wells at Manifold 1 was also closed. The recycle valve located inside the SVE trailer was opened slightly to control total vacuum of the system. These changes allowed ambient air to flush through the opened bleed valves at Manifold 3 and flush towards SVE-7 and SVE-8, focusing the entire vapor extraction in the area of the new treatment wells. PID measurements were collected at the influent, SVE-7 and SVE-8 before the adjustments were made and approximately 1 hour and 4 hours after adjustment on October 5, 2017. Concentrations measured with the PID showed an increase at the 1 hour and 4 hour mark indicating flushing through the area was occurring (see Table 2-2). The system was operated in this manner for the rest of October and November to allow thorough flushing of this area.

On December 8, 2017 the system was adjusted to allow air flow from all 15 wells of the Building 4-78/79 SVE system. PID measurements were collected from six wells which have historically shown higher concentrations (SVE-1, SVE-3, SVE-6, SVE-8, SVE-10, and SVE-12; see Attachment A). Based on those PID measurements, three wells (one from each manifold) and the influent were selected for TO-15 analysis to provide data for the planned rebound testing.

On December 15, 2017 the Building 4-78/79 SVE system was shut down to begin a 30 day rest period for the rebound testing. After shut down, approximately one teaspoon of blower oil was poured over the impeller and the system restarted momentarily to spread the oil over the impeller to prevent the blower from seizing during the rest period. This process was repeated two more times to ensure full coverage over the impeller. The condensate pump was run momentarily to ensure all water was removed to prevent the pump and hoses from freezing/cracking during the rest period as well.

Table 2-2 shows the PID readings for selected wells in the Building 4-78/79 SVE system. Table 2-3 shows the operational parameters (flow rate and PID readings) and a summary of the mass removal for the SVE system over this quarter.

### **2.1.3 Mass Removal Estimate**

Between April 17, 2015 (system startup) and December 15, 2017 the Building 4-78/79 SVE system has recovered an estimated 17.3 pounds of VOCs (a mixture of TCE, other CVOCs, and fuel related compounds),

as shown in Tables 2-1 and 2-3. Approximately 0.6 pounds of VOCs were removed during the current reporting period (fourth quarter 2017). The prior quarter showed a similar mass removal of VOCs, 0.4 lbs. The PID concentrations at the system influent during the current and previous quarter showed steady low-level concentrations. In this period, TCE accounted for 75% of the total VOCs detected in the TO-15 analysis (Table 2-1). The cumulative VOC mass removal for the Building 4-78/79 SVE system is shown in graphical form on Figure 2-2.

Figure 2-3 shows the total VOC and TCE mass removal for the Building 4-78/79 system, by calendar quarter. The solid bars on Figure 2-3 correspond to the total VOCs mass removed (as measured with a PID at the inlet to the SVE system). The hatched bars represent the TCE mass removed by quarter. The TCE values were calculated by applying a relative fraction of TCE to the total VOC values based on the TO-15 analytical results. The substantial difference between the total VOCs and the TCE fraction in the Fall of 2015 reflects a “slug” of TPHg that was measured in the October 13, 2015 TO-15 sample. At that time, TPHg represented 85% of the total VOCs, while TCE was slightly under 10% of the total VOCs. TPHg was not detected in the December 2017 TO-15 influent results and TCE represented 75% of the total VOCs. The lower/intermittent mass removal rate during winter 2016 was due to problems encountered when excess water was generated from the vapor extraction resulting in a temporary shutdown of the SVE system. The dashed line is an exponential curve fit to the bar chart of the TCE mass removal data. The general shape of the curve is consistent with an asymptotically declining TCE mass removal rate.

## **2.2 SWMU-172/174 SVE System**

The SWMU-172/174 SVE system consists of three vapor extraction wells and a SVE equipment trailer as shown in Figure 2-4. The SVE system is equipped with two vapor-phase GAC vessels, each filled with 1,800 pounds of virgin carbon. The GAC vapor treatment system is configured to run in a lead-lag configuration with vapor from the outlet of the lead vessel passing through the lag vessel. The system also includes two smaller vessels each containing 200 pounds of zeolite impregnated with permanganate.

Routine maintenance including oil changes, drive-belt tensioning and inspection, and inspection of the moisture separator was completed as per the Operations Manual (CALIBRE, 2014). Similar to the 4-78/79 SVE system, screening includes regular monitoring of total organic vapor concentrations with a calibrated PID coupled with selected vapor samples submitted for laboratory TO-15 analysis for VOCs.

### **2.2.1 TO-15 Laboratory Analysis of Vapor Samples**

Two vapor samples were collected from the SWMU-172/174 SVE system for TO-15 analysis on December 8, 2017. The results showed PCE represented approximately 90% of the total VOCs for the SWMU-172/174 SVE system influent sample. These current monitoring results show an 80% decrease in PCE and 84% decrease in total VOC concentrations compared to the rebound testing data collected in May 2017. Table

2-4 summarizes the TO-15 detections for the SWMU-172/174 SVE system for nine TO-15 sampling events<sup>2</sup> that have been implemented since system startup. The laboratory report is included in Attachment B.

### **2.2.2 Summary of Operations and Operational Changes**

The SVE system operated nearly continuously (approximately 91%) throughout the fourth quarter 2017. The system shut down in November 2017 likely due to an electrical fault. Upon system startup on November 30, 2017 the influent concentration was measured with a PID and shown to have increased during the time the system was down (see Table 2-5). A PID measurement was collected approximately five hours after the restart and the levels had dropped marginally (1,720 ppbv to 1,545 ppbv). PID measurements were collected again on December 8, 2017 and had dropped to 1,220 ppbv indicating some rebound had occurred during the SVE system down time but concentrations were declining. Approximately 1 gallon of water was generated in the moisture separator at the SWMU-172/174 SVE system in this quarter.

On December 15, 2017 the SWMU-172/174 SVE system was shut down to begin a 30 day rest period for the rebound testing. Upon arrival at the site the system flow rate was at 0" H<sub>2</sub>O and the vacuum was elevated at 86" H<sub>2</sub>O (normally around 40" H<sub>2</sub>O). After inspection it was determined the air filter had become clogged. The air filter was removed and a replacement was ordered. At that point the system was shut down and approximately one tsp of blower oil was poured over the impeller and the system restarted momentarily to spread the oil over the impeller to prevent the blower from seizing during the rest period. This process was repeated two more times to ensure full coverage over the impeller. The condensate pump was run momentarily to ensure all water was removed to prevent the pump and hoses from freezing/cracking during the rest period as well.

Table 2-5 shows the PID readings for the wells in the SWMU-172/174 SVE system. Table 2-6 shows the operational parameters (flow rate and PID readings) and a summary of the mass removal for the SVE system over this quarter.

### **2.2.3 Mass Removal Estimate**

Between initial startup on April 17, 2015 and December 8, 2017 the SWMU-172/174 SVE system has recovered an estimated 13.0 pounds of VOCs (primarily PCE), as shown in Table 2-6. Approximately 0.7 pounds of VOCs were removed during the current reporting period (fourth quarter 2017), which was identical to the VOC mass removal in the prior quarter. In this period, PCE accounted for 90% of the total VOCs detected in the TO-15 analysis (Table 2-4). The cumulative VOC mass removal for the SWMU-172/174 SVE system is shown in graphical form on Figure 2-5. Figure 2-6 shows the total VOC and PCE mass removal rate by quarter for the SWMU-172/174 SVE system. The general shape of the curve is consistent with an asymptotically declining PCE mass removal rate.

---

<sup>2</sup> Multiple changes to SVE system operations have been implemented over the period where data are shown. Changes to extraction flow rates by SVE wells are used to maximize the VOC mass removal and the corresponding SVE influent concentration is highly dependent on the flow rate from selected wells.

### **2.3 Recommended Next Steps for the SVE Systems**

PID results from both systems show low-level VOC concentrations continue to be removed at asymptotically low levels. Given these data, a rebound test for both systems was started on December 15, 2017. The rebound test will follow the standard procedures outlined in the previous quarterly report. The next planned activities for both SVE systems is to monitor system concentrations (with PID and TO-15 analysis) in mid-January 2018 after a shutdown period of approximately 30 days.

### **3.0 Continuing Groundwater Treatment**

Groundwater treatment is being implemented at several AOCs/SWMUs at the Renton Facility. The remedy being implemented is ERD of chlorinated solvents at targeted areas and most recently by anaerobic biodegradation of benzene by nitrate/sulfate injections at the 4-78/79 Building. The ERD treatment involves substrate injection using sucrose as a carbon source to stimulate biological degradation of the chlorinated solvents. Substrate injections were conducted in December 2014 through June 2016 and summarized in prior reports. No sucrose substrate injections were completed in this quarterly reporting period. In most areas, monitoring and injection wells show total organic carbon (TOC) levels are dropping to near background concentrations indicating the need for additional substrate injections to promote continued dechlorination in areas where VOCs are still present.

Boeing has proposed to implement continued bioremediation treatment in selected areas of the 4-78/79 area, focusing on elevated CVOC concentrations observed at monitoring well GW-033S (total CVOCs at 1,430 µg/L in November 2017). Injections will consist of approximately 500 gallons of 6-10% sugar substrate using existing IWs previously used for sugar substrate injections. Substrate will be derived from a concentrated sucrose/fructose syrup diluted to the desired concentrations. The planned IWs in the 4-78/79 area include: B78-12, B78-14, B78-15, and B78-16 (Figure 3-1) and substrate injections are planned for January 2018.

Site wide groundwater sampling was conducted as part of the quarterly monitoring program during this reporting period and the results are presented in the main text of the quarterly report to Ecology.

#### **3.1 4-78/79 Building Injection Well Installation, Monitoring and Injection for Benzene**

In September 2017 Boeing submitted a Tech Memo to Ecology that recommended adaptations and expansion of the bioremediation system to address a small area of the Building 4-78/79 plume that contains benzene (CALIBRE 2017). The biodegradation of benzene at this site involves the use of injected/added compounds to act as an electron acceptor (common amendments include nitrate and sulfate) while the hydrocarbon serves as the electron donor. Nitrate and sulfate injections were completed in October 2017 following the installation of five new injection wells in the area of the 4-78/79 Building area. Following approval of the Tech Memo, Boeing installed five injection wells (IWJs) in the area of the benzene plume (detected at GW-031S, GW-244S, and B78-11) for the optimized remediation approach (Figure 3-1). Five two-inch diameter wells, screened from 5 to 20 feet below ground surface (ft bgs) were installed on October 5, 2017 (Well IDs: B78-17, B78-18, B78-19, B78-20, and B78-21). Soil cores were

collected from three wells during installation and screened with a PID. Two soil samples were collected from depths where elevated detections with the PID were encountered. The first sample was collected from B78-21 at 10 feet below ground surface [ft bgs] where PID readings showed 6.7 ppmv and the other from B78-20 at 7 ft bgs where PID readings showed 0.5 ppmv. Results of both samples indicated all analytes were below applicable soil cleanup levels (see Attachment B). Per the Tech Memo, following well installation, development and baseline groundwater sampling, CALIBRE completed the first round of nitrate/sulfate injections (see Table 3-1 for wells injected and total mass of substrate amendment per well). The initial injection event was completed on October 11, 2017 and included injections at the five recently installed IWs in addition to two previous existing IWs in the immediate area (B78-11 and B78-13).

The baseline monitoring data was collected on October 6, 2017 and the first round of performance monitoring data was collected at wells in this area on November 29, 2017 (Table 3-2 and Attachment B). Samples collected during the baseline event were targeted at depths just below the shallow silt zone in the area (sample depths around 8 ft bgs) however those results showed lower levels of benzene (<10 µg/L) than have been historically detected from nearby monitoring wells (~ 30 µg/L). The sample depths for the first round of performance monitoring were adjusted to focus at depths near the bottom of the well screen intervals and those results indicated higher concentrations of benzene at most wells sampled (see Table 3-2). Subsequent performance monitoring will be conducted at these deeper sample depths to monitor trends of benzene treatment. The samples were analyzed by Analytical Resources, Incorporated and the laboratory report is included in Attachment B.

The results of the performance monitoring event showed concentrations of nitrate ranging from <0.1 mg/L to 2.93 mg/L. Sulfate concentrations ranged from <0.1 mg/L to 53.9 mg/L at these same wells. Table 3-3 presents recent benzene concentration trends in this area before and after the October 2017 nitrate/sulfate injection event. Monitoring well GW-031S was sampled in mid-November and again in late November (approximately 30 days and 45 days following the initial nitrate/sulfate injection in this area) and those results show benzene concentrations decreasing from 60 µg/L to 18 µg/L. This decrease may be associated with increased biological activity in response to the recent nitrate/sulfate injections; continued monitoring at this area will be used to monitor this trend.

The initial benzene treatment injection event completed in October 2017 was implemented with low target concentrations of nitrate and sulfate at ~100 mg/L applied to each of the IWs. The results of the performance monitoring event show the injected amendments were rapidly consumed and Boeing has proposed to optimize the remedial action to provide additional reagents for the benzene plume treatment. The reagent concentration for the remedial optimization event is proposed at 200 mg/L (twice the concentration used during the initial injection event) to provide additional nitrate and sulfate to the impacted area. The planned IWs include B78-11, B78-13, B78-17, B78-18, B78-19, B78-20, and B78-21. The next injection event is planned for January 2018.

### **3.2 Recommendations for Groundwater Treatment Actions in Specific Areas**

Table 3-4 presents a summary of groundwater monitoring results, by area, related to groundwater treatment/ERD implementation. Current recommendations are to amend selected wells at SWMU-172/174, Building 4-78/79, and Apron A areas with sucrose substrate. Each of these areas showed TOC concentrations nearing background levels or VOC detections in recent sampling events. In addition, Boeing is planning a 2<sup>nd</sup> round of nitrate/sulfate injections for the benzene plume near Building 4-78/79.

### **4.0 Conclusions and Recommendations**

Performance data from the Building 4-78/79 and SWMU-172/174 SVE systems indicate continued VOC mass removal from the vadose zone along with asymptotically declining VOC concentrations in the extracted air. A key objective of the SVE systems operation is mass removal from the vadose zone to assist in groundwater cleanup. The groundwater monitoring data indicate significantly declining VOC levels within most areas of the targeted treatment areas (see groundwater sampling summary in the main text of the report); this observed groundwater restoration is the combined effect of both SVE operations for source control and the ERD treatment of the plumes. Both SVE systems were turned off at the end of this reporting period to begin rebound testing of the SVE systems. Monitoring at both SVE systems will be completed after an approximately 30 day rest period and those results will be provided in the following quarterly report.

Groundwater monitoring will continue according to the EDR, with supplemental VOC and TOC sampling at selected wells. Additional substrate injections are recommended for selected areas of the SWMU-172/174, Building 4-78/79, and Apron A sites for continued ERD treatment.

12/15/2017	817																389		

Notes:

<sup>1</sup> Days in operation since system startup on April 17, 2015.

<sup>2</sup> Concentrations measured are at the low end of the range of concentrations able to be measured by the PID. Data presented should be compared with analytical results presented in Table 2-1 which show no detections of COCs.

All PID results posted are reported in parts per billion by volume (ppbv).

PID values listed are field measurements calibrated to isobutylene that have not been corrected to the ionization potentials of the target compounds

Blank cells - Not all wells were measured with the PID during each sampling event.

Vapor samples for TO-15 analysis were collected on 12/8/2017.

Table 2-3 VOC Mass Removal Estimate - 4-78/4-79 SVE System

Date	PID Reading (ppbv)	Corrected Value (VOC) (ppbv) <sup>1</sup>	System Flow (cfm)	Cumulative Runtime Hours	VOCs removed in Operating Period Between Monitoring Events (lbs)	Cumulative VOC Mass Removed Since Start of SVE Operations in April, 2015 (lbs)

12/8/2017	528	345	119	18,928	0.17	17.17
12/15/2017	389	254	119	19,094	0.11	17.28

**Notes:**

PID = photoionization detector

ppbv = parts per billion by volume

cfm = cubic feet per minute

lbs = pounds

A correction factor of 0.65 has been applied to the PID vapor measurement for VOCs based on the mixture of analytes detected in the influent TO-15 analysis on 12/8/17.

TO-15 analysis results showed Trichloroethene made up of 75% of the total VOCs removed in the December 8, 2017 results.

PCE = tetrachloroethene

TCE = trichloroethene

Total Chlorinated = the sum of PCE, TCE, cis-1,2-DCE, trans-1,2-DCE, 1,1,1-TCA, and 1,1-DCA.

A remedial optimization operational change was made between the vapor sampling on 3/8/2016 and 6/30/2016 to increase VOC extraction.

Results from 5/30/17 represent rebound samples following system down time for blower and motor repairs. TO-15 samples were collected 30 and 100 minutes after system startup at the VPC inlet and SVE-3, and 225 minutes after startup at the VPC inlet.

Table 2-5 PID Monitoring - SWMU-172/174 SVE System

Date	Days in Operation Since Startup <sup>1</sup>	SVE-01	SVE-02	SVE-03	VPC Inlet	VPC Mid	VPC Outlet	Notes
10/4/2017	738	84	34	569	243	120	120	0.5 gal condensate in knockout tank
11/30/2017	795				1,720			System down; 0.5 gal condensate in knockout tank
11/30/2017	795				1,545			Check system at 1500; 5 hrs after restart.
12/8/2017	803			2,173	1,220		0	TO-15 samples from SVE-3 and influent.
12/15/2017	810							No readings collected; air filter had become clogged. Shut system down for rebound testing.

**Notes:**

<sup>1</sup> Days in operation since system startup on April 17, 2015.

<sup>2</sup> Concentrations measured are at the low end of the range of concentrations able to be measured by the PID. Data presented should be compared with analytical results presented in Table 2-4 which show no detections of COCs.

Blank cells - Not all wells were measured with the PID during each sampling event.

Table 2-6 VOC Mass Removal Estimate - SWMU 172/174 SVE System

Date	PID Reading (ppbv)	Corrected Value (PCE) (ppbv) <sup>1</sup>	System Flow (cfm)	Cumulative Runtime Hours	VOCs removed in Operating Period Between Monitoring Events (lbs)	Cumulative VOC Mass Removed Since Start of SVE Operations in April, 2015 (lbs)
10/4/2017	243	139	98	16,410	0.05	12.30
11/30/2017	1,720	985	90	17,522	0.37	12.67
11/30/2017	1,545	885	90	17,527	0.01	12.68
12/8/2017	1,220	699	86	17,716	0.28	12.95
12/15/2017		0	0	17,880	0.00	12.95

**Notes:**

PID = photoionization detector

ppbv = parts per billion by volume

cfm = cubic feet per minute

lbs = pounds

<sup>1</sup> A correction factor of 0.57 has been applied to the PID vapor measurement for VOCs based on the mixture of analytes detected in the TO-15 analysis at the influent sample point from 12/8/17.

TO-15 analysis results showed Tetrachloroethene made up 90% of the total VOCs removed at the influent on 12/8/17.

When comparing the August 2016 and December 2017 analytical results the PID readings recorded in November and December 2017 appear high. See Table 2-4 for analytical results.

Table 3-4 Groundwater Monitoring Results Summary and Recommended ERD Treatment - November 2017

GW Treatment Area	Source and downgradient	CPOC wells	Treatment IWS	ERD Treatment
SWMU-172/174	All detections are less than 1.0 ug/L.	All detections are less than 1.2 ug/L.	<i>Prior data, in May 2017 central area IWS showed total CVOCs range from 5.3 ug/L to 17 ug/L. TOC near background.</i>	<b>Substrate injection in selected IWS/areas (B172-1 through B172-10, B172-13, and B172-14).</b>
Building 4-78/4-79 SWMU/AOC Group	Most source area MWs are ND or less than 1.0 ug/L. One central well shows an increase in total CVOCs at 1,430 ug/L. Benzene remains in selected wells/area (<10 typically). GW-031S saw significant drop from Nov 13 to Nov 29 sampling - 60 ug/L to 18 ug/L.	Six of seven CPOC wells are ND for CVOCs. The one well with detections of CVOCs is less than 0.25 ug/L.	<i>Prior data, 4 of 5 wells with low detections where sum of CVOCs are less than 3 ug/L. One central well shows total CVOCs at 2,440 ug/L. TOC near background.</i>	<b>Substrate injection in selected IWS/areas around GW-033S.</b>
AOC-001/002	<i>Prior data, MW near source at 2.1 ug/L; downgradient all detections are less than 3 ug/L (GW192S)</i>	All detections are less than 1.0 ug/L.	Not sampled	<b>Inject 2 infiltration galleries at source.</b>
AOC-003	Not sampled	Detections at 0.67 ug/L.	<i>Prior data, in May 2017 one of four IWS sampled – VC detection less than 0.3 ug/L</i>	<b>No action</b>
Lot 20 / former 10-71	All MWs are ND.			<b>No action</b>
AOC-60	<i>Prior data, detections less than or equal to 3 ug/L</i>	<i>Prior data, all detections less than 0.11 ug/L</i>		<b>Inject MWs GW-012S and GW-147S</b>
AOC – 90	<i>Prior data, Detections of VC are less than 1 ug/L; benzene in 1 well at 1.69 ug/L (GW189S), the rest are ND</i>	<i>Prior data, detection in GW208S at 0.33 ug/L, GW207S at 0.24 ug/L, all the rest are ND</i>		<b>No action</b>
Apron A	Two wells sampled, one is ND and the other with VC at 0.94 ug/L.			<b>No action</b>
Building 4-70		<i>Prior data, CVOCs at 0.9 ug/L and 0.2 ug/L.</i>		<b>No action</b>

# Renton Cleanup Action SVE System -- 4-78/79

## Field Operations Log Form

Inspection Date: 11/30/17 Date of last inspection: \_\_\_\_\_

Periodic systems check:

- 1) Check flowrate, vacuum, pressure, moisture separator, water storage drums
- 2) Check each SVE well, VPC inlet, and VPC outlet with PID.

**Operational Parameters - Monitoring interval is variable.**

Inspection Time: 0917 Motor Hours: 2846.0

Blower	Current Value
Vacuum gauge	<u>38" H<sub>2</sub>O</u>
Pressure gauge	<u>7" H<sub>2</sub>O</u>
System flow rate	<u>50 CFM</u>
Blower Temperature	<u>127°F</u>
Temp. at lag	
VPC discharge	

Other Notes

**Other notes:** check oil level, drive belts, TEFC motor fan, any unusual noise/vibration

PID Model: PPB RAE 3000

Details: 0 PPM / 10.09 PPM

Calibration time/ date: 11/30/17 0915

PID check after monitoring:

Sampling Point	Time	PID Reading (1)	PID Reading (2)	Vacuum	Flow Rate (gauge)	Differential Pressure	Flow Rate Calculated <sup>1</sup>	Well Off

# Renton Cleanup Action SVE System - 4-78/79

## Field Operations Log Form

Inspection Date: 12/15/17 Date of last inspection: 12/8/17

Periodic systems check:

- 1) Check flowrate, vacuum, pressure, moisture separator, water storage drums
- 2) Check each SVE well, VPC inlet, and VPC outlet with PID.

### Operational Parameters - Monitoring interval is variable.

Inspection Time: <u>0810</u>		Motor Hours: <u>3208.4</u>
<b>Blower</b>	<b>Current Value</b>	<b>Other Notes</b>
Vacuum gauge	<u>36" H<sub>2</sub>O</u>	Onsite for system shut down to begin rebound testing. After measuring influent concentrations shut system down. Replaced air filter & poured ~ 1 tsp oil on impeller. Closed filter cap & bumped system. Spread oil on impeller to prevent seizing. Repeated 2 more times. Ran water pump @ KO tank to make sure pump is empty of water.
Pressure gauge	<u>34" H<sub>2</sub>O</u>	
System flow rate	<u>119 SCFM</u>	
Blower Temperature	<u>114° F</u>	
Temp. at lag VPC discharge		
<b>Other notes:</b> check oil level, drive belts, TEFC motor fan, any unusual noise/vibration		

PID Model: <u>PPB RAE 3000</u>				Details: <u>0 ppb / 10.08 ppm</u>

RE: Boeing Renton 4-79

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

-----

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

# Cooler Receipt Form

ARI Client: Calibre Boeing B.H.

Project Name: Boeing Renton

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 17J0113

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES NO

Were custody papers included with the cooler? ..... YES NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)  
Time: 12:57 10.4

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: D005266

Cooler Accepted by: B.H. Date: 10/6/17 Time: 12:57

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES NO

What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA YES NO

Were all bottles sealed in individual plastic bags? ..... YES NO

Did all bottles arrive in good condition (unbroken)? ..... YES NO

Were all bottle labels complete and legible? ..... YES NO

Did the number of containers listed on COC match with the number of containers received? ..... YES NO

Did all bottle labels and tags agree with custody papers? ..... YES NO

Were all bottles used correct for the requested analyses? ..... YES NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES NO

Were all VOC vials free of air bubbles? ..... NA YES NO

Was sufficient amount of sample sent in each bottle? ..... YES NO

Date VOC Trip Blank was made at ARI..... NA 10/2/17

Was Sample Split by ARI : NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: B.H. Date: 10/9/17 Time: 6:55

## Case Narrative

### Volatiles - EPA Method SW8260C

The sample(s) were run within the recommended holding times.

Initial and continuing calibrations were within method requirements with the exception flagged analytes in the associated forms. All samples which contain analyte are flagged with a "Q" qualifier and all are out of control low.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The LCS/LCSD percent recoveries and RPD were within control limits with the exception of Idomethane RPD which is flagged in the associated forms.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- Q Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20% RSD, <20% drift or minimum RRF)
- J Estimated concentration value detected below the reporting limit.
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- D The reported value is from a dilution
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Boeing Renton 4-79

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

-----

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

# Cooler Receipt Form

ARI Client: Boeing  
 COC No(s): \_\_\_\_\_ NA  
 Assigned ARI Job No: 17J0089

Project Name: Renton 4-79  
 Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_  
 Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO   
 Were custody papers included with the cooler? ..... YES  NO   
 Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO   
 Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) Time: 1415 14.7 YES  NO

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: D002565

Cooler Accepted by: SF Date: 10/5/17 Time: 1415

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO   
 What kind of packing material was used? ... Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper  Other: \_\_\_\_\_  
 Was sufficient ice used (if appropriate)? ..... NA YES  NO   
 Were all bottles sealed in individual plastic bags? ..... YES  NO   
 Did all bottles arrive in good condition (unbroken)? ..... YES  NO   
 Were all bottle labels complete and legible? ..... YES  NO   
 Did the number of containers listed on COC match with the number of containers received? ..... YES  NO   
 Did all bottle labels and tags agree with custody papers? ..... YES  NO   
 Were all bottles used correct for the requested analyses? ..... YES  NO   
 Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA  YES  NO   
 Were all VOC vials free of air bubbles? ..... NA  YES  NO   
 Was sufficient amount of sample sent in each bottle? ..... NA  YES  NO   
 Date VOC Trip Blank was made at ARI..... NA  YES  NO   
 Was Sample Split by ARI: NA  YES \_\_\_\_\_ Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: SF Date: 10/5/17 Time: 1717

## Case Narrative

### Volatiles - EPA Method SW8260C

The sample(s) were run within the recommended holding times.

Initial and continuing calibrations were within method requirements with the exception of Chloromethane, Vinyl Chloride, Bromomethane, Chloroethane, Trichlorofluoromethane, Carbon Tetrachloride and Styrene which were all out of control high. All samples which contain analyte are flagged with a "Q" qualifier within this report.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The LCS/LCSD percent recoveries and RPD were within control limits with the exception of those analytes flagged in the associated forms.

Samples 17J0089-01 and 17J0089-02 were reanalyzed due to analytes flagged with "E" qualifiers which indicates analytes exceeded the initial calibration range. The samples were reanalyzed and labeled 17J0089-01RE1 and 17J0089-02RE1. This resulted in all analytes falling within calibration range.

### Diesel/Heavy Oil Range Organics - WA-Ecology Method NW-TPHDx

The sample(s) were extracted and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The LCS percent recoveries were within control limits.

### Gasoline Range Organics - WA-Ecology Method NW-TPHG

The sample(s) were run within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The LCS percent recoveries were within control limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- Q Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20% RSD, <20% drift or minimum RRF)
- J Estimated concentration value detected below the reporting limit.
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- D The reported value is from a dilution
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Boeing Renton Regional GW Building 4-78/79

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

<u>Associated Work Order(s)</u>	<u>Associated SDG ID(s)</u>

-----

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

## Case Narrative

### Volatiles - EPA Method SW8260C

The sample(s) were run within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The LCS/LCSD percent recoveries and RPD were within control limits.

### Wet Chemistry

The sample(s) were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The LCS percent recoveries were within control limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- M Estimated value for a GC/MS analyte detected and confirmed by an analyst but with low spectral match parameters.
- H Hold time violation - Hold time was exceeded.
- D The reported value is from a dilution
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

12/21/2017

Mr. Justin Neste

CALIBRE, Environmental Technology Solutions  
20926 Pugh Rd NE

Poulsbo WA 98370

Project Name: Boeing Renton

Project #:

Workorder #: 1712213

Dear Mr. Justin Neste

The following report includes the data for the above referenced project for sample(s) received on 12/11/2017 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**  
**EPA Method TO-15**  
**CALIBRE, Environmental Technology Solutions**  
**Workorder# 1712213**

Six 1 Liter Summa Canister samples were received on December 11, 2017. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

The reported CCV for each daily batch may be derived from more than one analytical file due to the client's request for non-standard compounds. Non-standard compounds may have different acceptance criteria than the standard TO-14A/TO-15 compound list as per contract or verbal agreement.

A single point calibration for TPH referenced to Gasoline was performed for each daily analytical batch. Recovery is reported as 100% in the associated results for each CCV.

**Definition of Data Qualifying Flags**

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

## Summary of Detected Compounds EPA METHOD TO-15 GC/MS FULL SCAN

**Client Sample ID: 5-09-SVE-IN-120817**
