

Department Decision Recommendation

RE:

ERTS #:	<u>689352</u>	Site Name:	<u>Moonlight Oil</u>
UST ID#:	<u>9842</u>	Site Address:	<u>305 Whitcomb Avenue</u>
Facility/Site ID#:	<u>65338137</u>	City:	<u>Tonasket</u>
Cleanup Site ID #:	<u>15082</u>	County:	<u>Yakima</u>

In keeping with the requirement of WAC 173-340-310 (5) I recommend: this site receive a No Further Action because a release of a hazardous substance has occurred but in the department's judgment, does not pose a threat to human health or the environment.

Supporting Criteria:

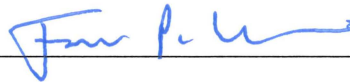

Petroleum contamination in soil was discovered during removal of underground storage tanks (USTs) and the associated dispenser and piping system in April 2019. Laboratory analytical data received by Ecology in May 2019 indicated cleanup level exceedances for diesel range organics (DRO) and gasoline range organics (GRO). DRO was detected in soil at 14,000 mg/kg in sample EA-SADI-22, collected at a depth of 24 inches adjacent to a dispenser island. GRO was detected in soil at 140,000 mg/kg in sample EA-SAG-4, collected at a depth of 11 feet below ground surface beneath a gasoline UST.

The contaminated soil was excavated and disposed of at the Okanogan Landfill. Weight tickets for disposal of 63.33 tons of petroleum contaminated soil were provided in the report titled *Underground Storage Tank Removal, Site Assessment and Contaminated Soil Remediation Report*, prepared by Able Clean-Up Technologies and dated July 23, 2019 (amended October 2019).

Sufficiency of cleanup was demonstrated through the collection of 33 excavation sidewall and floor confirmation samples, with all detections below applicable cleanup levels.

This Department Decision Recommendation should be reviewed and re-evaluated based on any new information about this site.
