1.0 INTRODUCTION

This report, prepared by Golder Associates Inc. (Golder) for Holcim (US) Inc., presents the results of surface water and groundwater monitoring conducted at the Ravensdale Site during the first quarter of 2019. The quarterly monitoring was completed during March 2019. At the Ravensdale Site, the first quarterly monitoring event of any year is typically completed in February. Heavy snowfall in the Puget Sound Area in February 2019 caused site access restrictions, and delayed the first quarterly monitoring event until early March 2019.

1.1 Site Description

The Ravensdale Site (Site) is located at 28131 Ravensdale-Black Diamond Road in Ravensdale, Washington. Figure 1 shows the Site location. For the purposes of this monitoring report, the Site is comprised of two distinct areas: the Lower Disposal Area (LDA) and the Dale Strip Pit (DSP). The LDA encompasses about 7 acres and is in the northwestern portion of the Site. The DSP, an area of about 6 acres, is in the southeastern portion of the Site. The LDA and DSP are shown in Figure 2.

Historically, sand and coal mining operations occurred on the Site. The Site is currently owned and operated by the Reserve Silica Corporation and is in the reclamation phase. The Site's historical background and previous environmental investigations are discussed further in Section 2.0.

1.2 Purpose and Scope

The purpose of the quarterly monitoring activities is to assess the groundwater and surface water conditions with respect to potential impact from buried cement kiln dust (CKD). Quarterly monitoring and reporting activities are conducted in accordance with the procedures established in the *Sampling and Analysis and Quality Assurance Project Plan* (SAP/QAPP) (ARCADIS 2006). The SAP/QAPP was approved by the Interagency Group (Washington State Department of Ecology, Public Health – Seattle and King County, and King County Department of Development and Environmental Services) in a letter to ARCADIS U.S., Inc. (ARCADIS) dated August 3, 2006 (Ecology 2006). Modifications to the SAP/QAPP related to sampling locations, test parameters, and sampling frequency were agreed upon as documented in the ARCADIS March 3, 2008 letter to the Department of Ecology. Modifications to the sampling frequency were agreed upon as documented in the Golder April 9, 2015 letter to Public Health – Seattle and King County and a subsequent approval letter from Public Health dated April 7, 2016.

The groundwater and surface water monitoring scope of work includes the following:

- Quarterly collection of groundwater samples from six on-site shallow/alluvial groundwater monitoring wells (MW-1A, MW-2A, MW-3A, MW-4A, MW-5A, and MW-6A) as part of the LDA monitoring program.
- Annual collection of groundwater samples from three on-site bedrock groundwater monitoring wells (MWB-1LDA, MWB-2LDA, and MWB-3LDA) as part of the LDA monitoring program.
- Annual collection of groundwater samples from four on-site bedrock groundwater-monitoring wells (MWB-1SDSP, MWB-1DDSP, MWB-5DSP, MWB-6DSP) as part of the DSP monitoring program.
- Semi-annual measurement of water levels and field parameters in monitoring wells MWB-2DSP and MWB-4SDSP.

- Quarterly collection of surface water samples from Infiltration Ponds #1, Weir (or the constructed wetlands located upstream if the Weir is dry), South Pond, and Still Well as part of the LDA surface water sampling program.
- Annual collection of water samples from the culvert that discharges from the former mine Portal (the Portal) as part of the DSP sampling program.
- Measurement of field parameters in water purged from the groundwater monitoring wells and directly from the surface water areas. Field parameters include: groundwater level readings (in wells only), pH, conductivity, temperature, dissolved oxygen (DO), oxidation-reduction potential (ORP), and turbidity.
- Analysis of the groundwater, surface water, and quality control samples for some combination of dissolved arsenic, lead, iron, manganese, potassium, and total dissolved solids (TDS).
- Analysis of duplicate samples for quality control.
- Quarterly Interceptor Trench monitoring for instantaneous flow volume and sampling for pH, TDS, and turbidity.

Figure 2 shows the location of the monitoring wells and surface water collection points. Table 1 presents construction details and water levels for each monitoring well.

2.0 BACKGROUND

2.1 Site Background

The following is a brief description of the historical mining and reclamation activities that occurred at the Site as provided by ARCADIS (ARCADIS 2009). This section also includes a discussion of the quarterly monitoring program.

2.1.1 LDA Background

The LDA is a former open pit sand mine that was reclaimed by placing CKD and other material into the mine excavation from June 1979 to October 1982. The LDA was filled with approximately 175,000 tons of CKD. Records indicate that a cap consisting of clay and up to 7 feet of overburden material from sand mining operations was placed over the CKD.

Historically, high pH seepage surfaced along the slope west of the LDA. The outbreaks are primarily located along the northern half of the western boundary of the LDA. The leachate drained through low-lying, marshy areas and commingled with stormwater before flowing to the three infiltration ponds (the Infiltration Ponds as shown in Figure 2) near the Ravensdale-Black Diamond Road (ARCADIS 2004). In 2013 a new seepage collection ditch was installed to intercept and collect the seepage (see Section 2.3.3 of this report), which then flowed inside a pipe to the infiltration ponds. In 2018, a water treatment system was constructed, and the high pH water captured by the collection ditch is currently piped to on-site treatment area for pH neutralization and dissolved metals removal. The treated water discharges from the treatment system to the infiltration ponds.

2.1.2 DSP Background

The DSP was created to mine the Dale No. 4 coal seam from the surface in 1946. Prior to 1946, the coal seam was worked from an underground mine. The underground mining chutes were driven upward to the surface to provide ventilation and allow the transportation of timbers into the mine. Construction of the mine allowed

groundwater to drain by gravity to the mine portal (Portal). The Portal has since collapsed, and now a pipe in the collapsed Portal allows water to continuously drain from the mine under an Ecology Sand and Gravel General Permit (Ecology 2005) with monitoring as described below. The Portal is located north of the LDA on the east side of the main haul road.

The DSP was approximately 1,800 feet long (north to south), averaged 140 feet wide (east to west), and averaged 40 feet deep. It was filled in the 1970s and 1980s with approximately 250,000 cubic yards of material including CKD, borrow, and other materials pursuant to a permit from Public Health – Seattle and King County. It is estimated that about one third of the DSP was filled with CKD (ARCADIS 2004).

2.2 Monitoring Locations

2.2.1 LDA

Shallow/alluvial monitoring wells were installed near the LDA in July 2005 and are monitored to assess the shallow/alluvial groundwater conditions with respect to potential impact from the CKD. Four of the wells (MW-1A, MW-2A, MW-5A, and MW-6A) are located around the infiltration ponds. MW-3A is located west of the high pH seepage area. MW-4A, a background well, is located south of, and upstream with respect to groundwater flow and surface water drainage, the high pH seepage area.

Bedrock monitoring wells were installed along the west side of the main access road, west of the LDA, in December 2006 to assess bedrock groundwater conditions in the vicinity of the LDA. MWB-1LDA is located near the northern tip of the LDA, MWB-2LDA is located near the center of the LDA, and MWB-3 LDA is located near the southern end of the LDA.

The LDA surface water sampling locations were chosen to evaluate the high pH seepage in the vicinity of the LDA. Infiltration Ponds #1 sampling location is situated in the westernmost infiltration pond. The infiltration ponds are located at the north end of the Site, near Ravensdale-Black Diamond Road. The Weir is located north of the access road to MW-3A immediately below the discharge point from the wetlands. If no flow is observed at the Weir, the constructed wetlands upstream are the alternative sampling location. The South Pond is a closed depression located west of MWB-2LDA near the southern end of the high pH seepage zone. The Still Well is a 2-inch-diameter flush-mount well located along the high pH seepage zone west of the LDA.

The LDA groundwater and surface water sampling locations are shown in Figure 2.

2.2.2 DSP

The DSP bedrock groundwater monitoring program was required by Public Health – Seattle and King County and Ecology as a condition of the CKD exemption as a dangerous waste on December 13, 1984 (Public Health 1984). The DSP bedrock groundwater monitoring program includes four wells in the DSP area (MWB-1SDSP, MWB-1DDSP, MWB-5DSP, and MWB-6DSP), which evaluate groundwater quality beneath, upgradient, and downgradient of the DSP. Groundwater discharging from the Portal is also monitored. The Portal was originally constructed to drain water from the Dale Strip Coal mine. There are two additional monitoring wells (MWB-2DSP and MWB-4SDSP) located in the DSP area that are being monitored for water levels and field parameters.

The DSP groundwater monitoring locations are shown in Figure 2.

2.2.3 LDA Interceptor Trench

The purpose of the Interceptor Trench is to intercept clean groundwater before the water enters the Lower Disposal Area CKD deposit and direct the water away from the deposit. Monitoring is performed at the Interceptor

Trench outfall for flow, pH, turbidity, and total dissolved solids. The purpose of the monitoring is to ensure that the trench is not collecting impacted groundwater.

2.3 Mitigation Activities

2.3.1 LDA Cover Upgrade

During September and October 2007, the existing soil cover on the LDA was regraded to provide positive drainage at all locations, reduce overly-steep slope areas, and place a minimum 2-foot-thick clean soil cover over the entire area, including locations where CKD was exposed at the surface. The construction activities are described in the Construction Summary Report (Golder 2008a).

2.3.2 LDA Seep Collection System Test Trenches

During September and October 2008, test trenches for collecting high pH seepage were constructed (Golder 2008b). The purpose of this test system was to evaluate the feasibility of using a more extensive trench system to collect high pH seepage that would otherwise discharge at the ground surface adjacent to the LDA. Details of the test trench construction are presented in the Construction Summary Report (Golder 2009a).

Between October 2008 and September 2009, Golder monitored seepage flow rates from each of two test trenches and the tightline discharge once per month, on average. A summary of activities and results of this monitoring program is presented in the flow monitoring report (Golder 2009b).

2.3.3 LDA Seep Collection Ditch and Seepage Treatment System

In February 2013, a surface water collection ditch and concrete catch basin were constructed on the bench below the main access road on the west side of the LDA. This system was installed to capture leachate seeps emerging from the bank along the east side of the bench (west of the main access road) and direct them into the existing tightline that carries flow from the test trenches to the infiltration pond. In April 2015, the 4-inch diameter pipeline from the catch basin to the infiltration ponds, approximately 1,000 feet in length, was replaced with a 12-inch diameter pipeline to alleviate plugging issues.

In December 2017, the seepage collection trench was further extended approximately 100 feet to the north to collect additional seepage that was not previously captured. Seepage water was then redirected into a seepage treatment system, which completed construction and started initial operations on September 28, 2018. The treatment system uses carbon dioxide (CO_2) sparging to neutralize pH levels and arsenic and lead adsorption using an iron-based adsorption media.

During the initial year of operation, the system is being operated intermittingly, with system shut-downs occurring as various upgrades and modifications are completed. The upgrades are necessary to increase the long-term operational efficiency of the treatment system. The treatment system was not operating during the period when the 2019 first quarter surface and groundwater monitoring was conducted.

2.3.4 LDA Interceptor Trench

In September 2013, a gravel-filled interceptor trench that included a perforated drain pipe and vertical downgradient liner was installed south of the LDA to intercept clean groundwater moving in a northerly direction prior to encountering the cement kiln dust in the LDA.

2.3.5 DSP Cover Upgrade

Cover upgrade activities began at the DSP in November 2010 and were completed in July 2011. Cover upgrade activities included stripping surficial vegetation and topsoil, regrading the existing surface to establish positive drainage, placing low permeability soil to provide a minimum 2-foot-thick layer at all locations, filling the existing ditch along the northeast side of the DSP, replacing topsoil, and revegetating the cover surface.

2.4 Groundwater and Surface Water Monitoring Schedule

Various levels of groundwater and surface water monitoring have been conducted at the Site since 2002. ARCADIS performed monthly and quarterly monitoring activities through the second quarter of 2009. Golder assumed responsibility for monitoring activities in August 2009 and conducted groundwater and surface water monitoring until April 2014. GeoEngineers performed groundwater and surface monitoring from May to December 2014. Golder resumed the groundwater and surface monitoring in February 2015.

2.4.1 LDA Groundwater Sampling

Groundwater monitoring of the shallow/alluvial monitoring wells generally occurred on a quarterly schedule from July 2005 to September 2008. After the seep collection test trenches were installed, groundwater monitoring frequency for the four wells around the infiltration ponds was increased to monthly through September 2009. At the end of the formal test trench monitoring program in October 2009, the sampling frequency for these four wells returned to quarterly.

Groundwater monitoring of the bedrock monitoring wells generally occurred on a quarterly schedule since December 2006. A letter was submitted to the Public Health – Seattle and King County dated April 9, 2015 requesting a variance to the LDA bedrock groundwater monitoring frequency. In a letter to Golder dated April 7, 2016, Public Health – Seattle and King County granted a variance for three years to reduce the monitoring frequency of the Ravensdale LDA bedrock wells to annually (Public Health 2016).

2.4.2 LDA Surface Water Sampling

Surface water monitoring of Infiltration Ponds #1, Weir (or the constructed wetlands located upstream if the Weir was dry), South Pond, and Still Well generally occurred on a monthly schedule from February 2005 to June 2008 and then was reduced to the current quarterly schedule.

2.4.3 DSP Groundwater Sampling

Groundwater monitoring of wells MWB-1SDSP and MWB-1DDSP generally occurred on a quarterly schedule starting in December 2002. Monitoring of well MWB-5DSP generally occurred on a monthly schedule from December 2006 to June 2008 and then monitoring was reduced to quarterly. Groundwater monitoring of well MWB-6DSP generally occurred on a quarterly schedule starting in December 2006. Groundwater levels and field parameters are being measured in wells MWB-2DSP and MWB-4SDSP on a quarterly schedule. Surface water monitoring of the Portal discharge generally occurred on a quarterly schedule starting in March 2002.

In a letter to Golder dated May 16, 2012, Public Health – Seattle and King County granted a variance for three years to reduce the monitoring frequency of the Ravensdale DSP wells and Portal to semi-annually (Public Health 2012). During this variance period, groundwater monitoring of the DSP wells occurred during the first and third quarters each year. During the second and fourth quarters, only water levels were measured in these wells. This variance expired in May 2015. A letter was submitted to the Public Health – Seattle and King County dated April 9, 2015, requesting a variance to the groundwater monitoring frequency. Pending approval, sampling of the DSP

and Portal was reverted to quarterly, starting with the August 2015 sampling quarter. In a letter to Golder dated April 7, 2016, Public Health – Seattle and King County granted a variance for three years to reduce the monitoring frequency of the DSP wells and Portal to annually (Public Health 2016).

2.4.4 LDA Interceptor Trench Sampling

The Interceptor Trench was monitored monthly from October 2013 to December 2014 and data showed that the water being collected and discharged is not impacted. A reduction in monitoring frequency to quarterly was approved by King County Public Health in an email to Joel Bolduc of Holcim dated January 2, 2015 (Public Health 2015). The Interceptor Trench is being monitored for pH, turbidity, and TDS.

3.0 SAMPLING ACTIVITIES

The following section summarizes the activities associated with the fourth quarter monitoring event conducted in November 2018.

3.1 Common Elements

3.1.1 Field Parameter Measurements

Field parameters for groundwater and surface water were measured as part of the sampling activities described in the following sections. These measurements were performed with the following equipment:

- YSI 556 multimeter with pH, ORP (oxidation-reduction potential), conductivity, dissolved oxygen, and temperature probes
- Hach 2100P Turbidimeter

3.1.2 Laboratory Analysis

Laboratory analyses were performed on samples collected from the various locations described in the following sections. Although the analytic parameters varied between the types of samples, the following elements are common to all the sampling and analysis activities:

- The collected samples were transported to the laboratory within appropriate sample hold times following chain-of-custody protocols.
- The testing was performed by Analytical Resources, Inc. (ARI) of Tukwila, Washington.
- All samples were tested for the following parameters using the methods indicated:

Arsenic (dissolved)	EPA Method 200.8
Lead (dissolved)	EPA Method 200.8
Potassium (dissolved)	EPA Method 6010C
Iron (dissolved)	EPA Method 6010C
Manganese (dissolved)	EPA Method 6010C
Total Dissolved Solids (TDS)	EPA Method 160.1

- Interceptor Trench samples were tested for the following parameters using the method indicated:

pH	Field Measurement
TDS	EPA Method 160.1
Turbidity	Field Measurement

- Summaries of historical analytic data for the various sampling locations are presented in Appendix A. Validated analytical laboratory data packages are provided electronically on the flash drive in Appendix C.

3.2 Sampling Procedures

3.2.1 LDA Groundwater Sampling

From March 11 to March 13, 2019, Golder sampled groundwater from the LDA shallow/alluvial groundwater monitoring wells (MW-1A, MW-2A, MW-3A, MW-4A, MW-5A, and MW-6A) and bedrock monitoring wells (MWB-1LDA, MWB-2LDA, and MWB-3LDA). The following methods and procedures were used in collecting the groundwater samples:

- Depth to groundwater was measured in the wells prior to purging and sampling. Table 1 presents depth to water measurements and elevations.
- Using dedicated tubing connected to a portable, stainless steel bladder pump or a peristaltic pump (if groundwater elevation allowed), water from wells MW-1A, MW-2A, MW-3A, MW-4A, MW-5A, and MW-6A was purged at a rate between approximately 200 and 350 milliliters (mL) per minute.
- Using the dedicated discharge tubing connected to the dedicated bladder pump, water from wells MWB-1LDA, MWB-2LDA, and MWB-3LDA was purged at a rate between approximately 350 and 500 mL per minute.
- Field parameters of pH, conductivity, temperature, dissolved oxygen, oxidation-reduction potential, and turbidity were measured and recorded during purging at approximately five-minute intervals until parameters were stable. Parameters were considered stable when three consecutive readings of pH, temperature, and conductivity were within five percent.
- Once the field parameters stabilized, the purging phase of the process was concluded. Groundwater samples were then collected directly from the dedicated sample tubing. Samples collected for dissolved metals were field-filtered through a 0.45 μm in-line filter.
- For quality control purposes, a duplicate sample was collected from MW-2A (labeled as MW-7A) and at MWB-1LDA (labeled as MWB-7LDA).
- Laboratory-provided containers were used to collect the samples. For each groundwater sample, one 500-mL bottle preserved with nitric acid and one 1-Liter (L) un-preserved bottle were collected. The samples were then labeled and placed in a cooler with ice.

All groundwater and quality control samples were analyzed for the parameters listed in Section 3.1.2. Analytical results are discussed in Section 4.0, and the field parameters and analytical data are presented in Table 2.

3.2.2 LDA Surface Water Sampling

On March 11 and March 13, 2019, Golder sampled surface water from the Still Well, South Pond, Weir, and the Infiltration Ponds #1 sampling locations. The following methods and procedures were used in collecting the surface water samples:

- Field parameters of pH, conductivity, temperature, dissolved oxygen, oxidation-reduction potential, and turbidity were measured and recorded. These parameters were measured and recorded at each of the surface water locations at the time of sample collection.
- Grab surface water samples were collected using dedicated sample tubing connected to a peristaltic pump. Samples collected for dissolved metals were field-filtered through a 0.45 μm in-line filter.
- For quality control purposes, a duplicate sample was collected from Infiltration Ponds #1 (labeled as Infiltration Ponds #2).
- Laboratory-provided containers were used to collect the surface water samples. For each surface water sample, one 500-mL bottle preserved with nitric acid and one unpreserved 1-L bottle were collected. The samples were then labeled and placed in a cooler with ice.
- The pH of the LDA surface water samples is typically high (greater than 10). Sampling protocol requires that the preserved samples for dissolved metals analysis have a pH of less than 2 upon receipt at the laboratory. In order to meet this requirement, the pH of the LDA surface water samples collected for metals analysis were checked at the time of sample collection using pH test paper strips. If the pH was higher than 2, nitric acid (provided by the laboratory) was added until the pH of the sample was less than 2.

All surface water and quality control samples were analyzed for the parameters listed in Section 3.1.2. Analytical results are discussed in Section 4.0, and the field parameters and analytical data are presented in Table 2.

3.2.3 DSP Groundwater Sampling

On March 11 and March 12, 2019, Golder sampled groundwater from the DSP groundwater monitoring wells (MWB-1SDSP, MWB-1DDSP, MWB-5DSP, and MWB-6DSP) and the Portal. The following methods and procedures were used in collecting the groundwater samples:

- Depth to groundwater was measured in the wells prior to purging and sampling. Table 1 presents depth to water measurements and elevations.
- Using the dedicated discharge tubing connected to the dedicated bladder pump, water from wells MWB-1DDSP, MWB-1SDSP, MWB-5DSP, and MWB-6DSP was purged at a rate between approximately 400 and 500 mL per minute.
- Field parameters of pH, conductivity, temperature, dissolved oxygen, oxidation-reduction potential, and turbidity were measured and recorded during purging at approximately five-minute intervals until parameters were stable. Parameters were considered stable when three consecutive readings of pH, temperature, and conductivity were within five percent.
- Once the field parameters stabilized, the purging phase of the process was concluded. Groundwater samples were then collected directly from the dedicated sample tubing. Samples collected for dissolved metals were field-filtered through a 0.45 μm in-line filter.

- Grab water samples were collected from the Portal using dedicated sample tubing connected to a peristaltic pump. The water quality parameters were measured and recorded at the Portal at the time of sample collection.
- For quality control purposes, a duplicate sample was collected from MWB-6DSP (labeled as MWB-9DSP).
- Laboratory-provided containers were used to collect the samples. For each groundwater sample, one 500-mL bottle preserved with nitric acid and one 1-L un-preserved bottle were collected. The samples were then labeled and placed in a cooler with ice.

All groundwater and quality control samples were analyzed for the parameters listed in Section 3.1.2. Analytical results are discussed in Section 4.0, and the field parameters and analytical data are presented in Table 2.

In addition, water levels and field parameters were measured in DSP monitoring wells 2DSP and 4SDSP.

3.2.4 LDA Interceptor Trench Sampling

On March 13, 2019, Golder sampled groundwater from the Interceptor Trench. The following methods and procedures were used in collecting the groundwater sample:

- Field pH, turbidity, and the flow rate at the Interceptor Trench outfall were measured and recorded.
- Grab water samples were collected from the Interceptor Trench by placing the sample bottles under the flow of water. pH and turbidity were measured and recorded at the Interceptor Trench at the time of sample collection.
- Laboratory-provided containers were used to collect the sample for TDS lab analysis. One 1-L unpreserved bottle was collected. The sample was then labeled and placed in a cooler with ice.

The Interceptor Trench sample was analyzed for the parameters listed in Section 3.1.2. Analytical results are discussed in Section 4.0, and the field parameters and analytical data are presented in Table 4.

4.0 RESULTS

4.1 Preliminary Standards

Preliminary standards have been established from the Washington State Administrative Code (WAC) 173-200 and 246-290-310(3)(a) for some of the field parameters and analytes measured as part of the monitoring program. These standards are presented in Table 3.

4.2 Method Detection Limits and Reporting Limits

The Method Detection Limit (MDL) is the minimum concentration of an analyte that the laboratory can detect using the specified analytical method and equipment. The Reporting Limit (RL) is the lowest concentration that the laboratory can report with certainty after adjustments have been made for sample dilution, sample weight, and other factors.

Where the laboratory analytical results indicate non-detection (ND), the concentration of an analyte is below the MDL. On the trend graphs presented in Appendix B, non-detections for sampling events prior to the December 2009 fourth quarter monitoring were plotted as fifty percent of the RL value. Beginning with the December 2009 fourth quarter monitoring event, non-detections are plotted as the MDL value, which is more representative of actual laboratory results. Method Detection Limits are not available for all the historical data; therefore, non-

detect data prior to December 2009 remains plotted as fifty percent of the RL value. For TDS results, non-detect data are plotted at the RL.

4.3 Data Validation

All analytical data were subject to a data validation review. Data validation was conducted in accordance with the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (EPA 2014) and the Site Sampling and Analysis and Quality Assurance Project Plan (ARCADIS 2006). Data reporting qualifiers are included with the analytical results in Appendix A. Copies of the data validation checklist are included in Appendix C, along with the raw analytical data packages provided by the laboratory. The data validation review found that all the data were considered valid and usable.

4.4 Measurement Results

A summary of the groundwater field parameters and analytical results for the March 2019 first quarter monitoring are included in Table 2. Interceptor Trench results are provided in Table 4. Trend graphs of pH, TDS, and arsenic and potassium concentrations measured in each monitoring well are presented in Appendix B.

Results observed during the March 2019 round were generally consistent with previous sampling rounds. Because the treatment system was not operating during the March 2019 sampling round, pH levels and arsenic concentrations detected in the infiltration ponds and the two groundwater monitoring wells (MW-5A and MW-6A) located immediately downgradient of the infiltration ponds were higher than detected during the November 2018 monitoring round when the treatment system was operating (Golder 2019). The pH and arsenic concentrations detected during the March 2019 monitoring were within historically detected concentrations for these sampling points. As the treatment system upgrades are completed and the system is activated continuously, subsequent sampling rounds will establish long-term concentration trends under seepage treatment conditions. The treatment system is expected to return to operational status in the second quarter of 2019.

5.0 LIMITATIONS

Golder has prepared this report for the exclusive use of Holcim (US) Inc. and their authorized agents. It may also be submitted to regulatory agencies.

Within the limitations of scope, schedule and budget, our services have been executed in accordance with generally accepted environmental science practices in this area at the time this report was prepared. No warranty or other conditions, express or implied, should be understood. This report was prepared, in part, based on previous investigations and data collected by others. Golder Associates Inc. is not responsible for any data that were inaccurately reported by others and reproduced here.

Notes:

-	Not analyzed or not available
<	Analyte not detected above the reporting limit shown
a	North Creek Analytical, Inc.
b	Severn Trent Laboratories
c	Preliminary standard is the standard listed or the site-specific (natural) background concentration, whichever is highest
d	Site background arsenic value to be determined (TBD)
J	Data validation code; estimated value
J+	Data validation code; estimated value with positive bias
°C	Degrees Celsius
µmhos/cm	Micromhos per centimeter
feet bmp	Feet below measuring point
feet msl	Feet above mean sea level
mg/L	Milligrams per liter
mV	Millivolts
NTU	Nephelometric Turbidity Unit

Notes:

-	Not analyzed or not available
<	Analyte not detected above the reporting limit shown
a	North Creek Analytical, Inc.
b	Severn Trent Laboratories
c	Preliminary standard is the standard listed or the site-specific (natural) background concentration, whichever is highest
d	Site background arsenic value to be determined (TBD)
e	Field parameters for Infiltration Ponds #1 were inadvertently not collected during May 2016 sampling
J	Data validation code; estimated value
J+	Data validation code; estimated value with positive bias
°C	Degrees Celsius
µmhos/cm	Micromhos per centimeter
feet bmp	Feet below measuring point
feet msl	Feet above mean sea level
mg/L	Milligrams per liter
mV	Millivolts
NTU	Nephelometric Turbidity Unit

Notes:

*	Sample collected from constructed wetland (alternative sampling location) upstream of weir
-	Not analyzed or not available
Dry	Weir dry; unable to collect field parameters or samples
<	Analyte not detected above the reporting limit shown
a	North Creek Analytical, Inc.
b	Severn Trent Laboratories
c	Preliminary standard is the standard listed or the site-specific (natural) background concentration, whichever is highest
d	Site background arsenic value to be determined (TBD)
J	Data validation code; estimated value
J+	Data validation code; estimated value with positive bias
°C	Degrees Celsius
µmhos/cm	Micromhos per centimeter
feet bmp	Feet below measuring point
feet msl	Feet above mean sea level
gpm	Gallons per minute
mg/L	Milligrams per liter
mV	Millivolts
NTU	Nephelometric Turbidity Unit

Notes:

-	Not analyzed or not available
<	Analyte not detected above the reporting limit shown
+	South Pond frozen; unable to collect field parameters or samples
Dry	South Pond dry; unable to collect field parameters or samples
a	North Creek Analytical, Inc.
b	Severn Trent Laboratories
c	Preliminary standard is the standard listed or the site-specific (natural) background concentration, whichever is highest
d	Site background arsenic value to be determined (TBD)
J	Data validation code; estimated value
J+	Data validation code; estimated value with positive bias
°C	Degrees Celsius
µmhos/cm	Micromhos per centimeter
feet bmp	Feet below measuring point
feet msl	Feet above mean sea level
mg/L	Milligrams per liter
mV	Millivolts
NTU	Nephelometric Turbidity Unit

Preliminary Standard[a]	-	-	-	700	-	-	-	6.5-8.5	500	TBD[b]	0.3	0.05	0.05	-

Notes:
Top of casing elevation (feet msl): 609.83

-	Not measured or not available
<	Analyte not detected above the reporting limit shown
*	Depth to water (DTW) measurements for all shallow/alluvial wells collected on the same day; date noted is sampling date
a	Preliminary standard is the standard listed or the site-specific (natural) background concentration, whichever is highest
b	Site background arsenic value to be determined (TBD)
J	Data validation code; estimated value
J+	Data validation code; estimated value with positive bias
°C	Degrees Celsius
U	Data validation code; not detected at the Reporting Limit (RL)
µmhos/cm	Micromhos per centimeter
feet bmp	Feet below measuring point
feet msl	Feet above mean sea level
mg/L	Milligrams per liter
mV	Millivolts
NTU	Nephelometric Turbidity Unit

Notes:
Top of casing elevation (feet msl): 603.61

-	Not measured or not available
<	Analyte not detected above the reporting limit shown
*	Depth to water (DTW) measurements for all shallow/alluvial wells collected on the same day; date noted is sampling date
**	Dissolved Oxygen meter working incorrectly at the time of sample collection
a	Preliminary standard is the standard listed or the site-specific (natural) background concentration, whichever is highest
b	Site background arsenic value to be determined (TBD)
J	Data validation code; estimated value
J+	Data validation code; estimated value with positive bias
°C	Degrees Celsius
U	Data validation code; not detected at the Reporting Limit (RL)
µmhos/cm	Micromhos per centimeter
feet bmp	Feet below measuring point
feet msl	Feet above mean sea level
mg/L	Milligrams per liter
mV	Millivolts
NTU	Nephelometric Turbidity Unit

Notes:
Top of casing elevation (feet msl): 701.85

-	Not measured or not available		
<	Analyte not detected above the reporting limit shown		
*	Depth to water (DTW) measurements for all shallow/alluvial wells collected on the same day; date noted is sampling date		
a	Preliminary standard is the standard listed or the site-specific (natural) background concentration, whichever is highest		
b	Site background arsenic value to be determined (TBD)		
J	Data validation code; estimated value	feet msl	Feet above mean sea level
°C	Degrees Celsius	mg/L	Milligrams per liter
µmhos/cm	Micromhos per centimeter	mV	Millivolts
feet bmp	Feet below measuring point	NTU	Nephelometric Turbidity Unit

Preliminary Standard[a]	-	-	-	700	-	-	-	6.5-8.5	500	TBD[b]	0.3	0.05	0.05	-

Notes:
Top of casing elevation (feet msl): 607.61

-	Not measured or not available
<	Analyte not detected above the reporting limit shown
*	Depth to water (DTW) measurements for all shallow/alluvial wells collected on the same day; date noted is sampling date
Dry	Well went dry during sampling. Unable to collect sample.
a	Preliminary standard is the standard listed or the site-specific (natural) background concentration, whichever is highest
b	Site background arsenic value to be determined (TBD)
J	Data validation code; estimated value
J+	Data validation code; estimated value with positive bias
°C	Degrees Celsius
µmhos/cm	Micromhos per centimeter
feet bmp	Feet below measuring point
feet msl	Feet above mean sea level
mg/L	Milligrams per liter
mV	Millivolts
NTU	Nephelometric Turbidity Unit

Preliminary Standard[a]	-	-	-	700	-	-	-	6.5-8.5	500	TBD[b]	0.3	0.05	0.05	-

Notes:
Top of casing elevation (feet msl): 605.35

-	Not measured or not available
<	Analyte not detected above the reporting limit shown
*	Depth to water (DTW) measurements for all shallow/alluvial wells collected on the same day; date noted is sampling date
a	Preliminary standard is the standard listed or the site-specific (natural) background concentration, whichever is highest
b	Site background arsenic value to be determined (TBD)
J	Data validation code; estimated value
J+	Data validation code; estimated value with positive bias
°C	Degrees Celsius
U	Data validation code; not detected at the Reporting Limit (RL)
µmhos/cm	Micromhos per centimeter
feet bmp	Feet below measuring point
feet msl	Feet above mean sea level
mg/L	Milligrams per liter
mV	Millivolts
NTU	Nephelometric Turbidity Unit

Preliminary Standard[a]	-	-	-	700	-	-	-	6.5-8.5	500	TBD[b]	0.3	0.05	0.05	-

Note:

Top of casing elevation (feet msl): 701.08

1	Reduction in monitoring frequency approved by Public Health – Seattle and King County in a letter to Golder Associates Inc. dated April 7, 2016. Field parameters collected semi-annually, analytical samples collected annually.
-	Not available
<	Analyte not detected above the reporting limit shown
*	Depth to water (DTW) measurements for all bedrock LDA wells collected on the same day; date noted is sampling date
a	Preliminary standard is the standard listed or the site-specific (natural) background concentration, whichever is highest
b	Site background arsenic value to be determined (TBD)
J	Data validation code; estimated value
J+	Data validation code; estimated value with positive bias
°C	Degrees Celsius
µmhos/cm	Micromhos per centimeter
feet bmp	Feet below measuring point
feet msl	Feet above mean sea level
mg/L	Milligrams per liter
mV	Millivolts
NTU	Nephelometric Turbidity Unit

Note:
Top of casing elevation (feet msl): 740.59

1	Reduction in monitoring frequency approved by Public Health – Seattle and King County in a letter to Golder Associates Inc. dated April 7, 2016. Field parameters collected semi-annually, analytical samples collected annually.
-	Not available
<	Analyte not detected above the reporting limit shown
*	Depth to water (DTW) measurements for all bedrock LDA wells collected on the same day; date noted is sampling date
a	Preliminary standard is the standard listed or the site-specific (natural) background concentration, whichever is highest
b	Site background arsenic value to be determined (TBD)
J	Data validation code; estimated value
J+	Data validation code; estimated value with positive bias
°C	Degrees Celsius
µmhos/cm	Micromhos per centimeter
feet bmp	Feet below measuring point
feet msl	Feet above mean sea level
mg/L	Milligrams per liter
mV	Millivolts
NTU	Nephelometric Turbidity Unit

1	Reduction in monitoring frequency approved by Public Health – Seattle and King County in a letter to Golder Associates Inc. dated May 16, 2012		
2	Reduction in monitoring frequency approved by Public Health – Seattle and King County in a letter to Golder Associates Inc. dated April 7, 2016. Field parameters collected semi-annually, analytical samples collected annually.		
a	Preliminary standard is the standard listed or the site-specific (natural) background concentration, whichever is highest		
b	Site background arsenic value to be determined (TBD)		
J	Data validation code; estimated value	feet msl	Feet above mean sea level
°C	Degrees Celsius	mg/L	Milligrams per liter
µmhos/cm	Micromhos per centimeter	mV	Millivolts
feet bmp	Feet below measuring point	NTU	Nephelometric Turbidity Unit

Notes:
Top of casing elevation (feet msl) prior to DSP Cover Upgrade: 935.82
Top of casing elevation (feet msl) after DSP Cover Upgrade (completed July 2011): 928.81

1 Reduction in monitoring frequency approved by Public Health – Seattle and King County in a letter to Golder Associates Inc. dated April 7, 2016. Field parameters collected semi-annually, analytical samples collected annually.
- Not measured or not available
a Preliminary standard is the standard listed or the site-specific (natural) background concentration, whichever is highest
b Site background arsenic value to be determined (TBD)
J Data validation code; estimated value
°C Degrees Celsius
µmhos/cm Micromhos per centimeter
feet bmp Feet below measuring point
feet msl Feet above mean sea level
mg/L Milligrams per liter
mV Millivolts
NTU Nephelometric Turbidity Unit

Data Validation Report and Laboratory Analytical Results

DATA VALIDATION CHECKLIST

Project Name:	Ravensdale Project
Project Number:	15-20304.719
Sample Identification(s):	EB, Infiltration #1, Infiltration #2, MW-1A, MW-2A, MW-3A, MW-4A, MW-5A, MW-6A, MW-7A, MWB-1LDA, MWB-2LDA, MWB-3LDA, MWB-7LDA, MWB-1SDSP, MWB-1DDSP, MWB-5DSP, MWB-6DSP, MWB-9DSP, South Pond, Still Well, Weir, Portal, Interceptor Trench
Sample Date(s):	3/11, 3/12, 3/13/2019
Sample Team:	Reno Gregory, Joseph Xi, Golder Associates
Sample Matrix:	Aqueous
Analyzing Laboratory:	Analytical Resources, Inc. – Tukwila, WA
Analyses:	TDS (SM 2540 C), Metals (EPA 6010C, 200.8): Dissolved As, Pb, K, Fe, Mn
Laboratory Report No.:	19C0207

FIELD DATA PACKAGE DOCUMENTATION

	Reported		**Performance Acceptable**		**Not Required**
Field Sampling Logs:	NO	YES	NO	YES	
1. Sampling dates noted		X		X	
2. Sampling team indicated		X		X	
3. Sampling identification traceable to location collected		X		X	
4. Sample location		X		X	
5. Collection technique (bailer, pump, etc.)		X		X	
6. Sample container type		X		X	
7. Preservation methods		X		X	
8. Chain-of-custody form completed		X		X	
9. Required analytical methods requested		X		X	
10.Field sample logs completed properly and signed		X		X	
11. Number and type of field QC samples collected		X		X	
12. Field equipment calibration		X		X	
13. Field equipment decontamination		X		X	

QC – quality control

COMMENTS:

Performance was acceptable, with the following exceptions and/or notes:

ANALYTICAL DATA PACKAGE DOCUMENTATION

GENERAL INFORMATION

	Reported		Performance Acceptable		Not Required
	NO	YES	NO	YES	
1. Sample results		X		X	
2. Parameters analyzed		X		X	
3. Method of analysis		X		X	
4. Reporting limits of analysis		X		X	
5. Sample collection date		X		X	
6. Laboratory sample received date		X		X	
7. Sample preparation/extraction date		X		X	
8. Sample analysis date		X		X	
9. Copy of chain-of-custody form signed by lab sample custodian		X		X	
10. Narrative summary of QA or sample problems provided		X		X	

QA – quality assurance

COMMENTS:

Performance was acceptable, with the following exceptions and/or notes:

- The lab labelled samples EB as “FB” in the “Sample_Type” column of the EDD. The sample type label has been updated to the correct designation of “N”.
- The lab noted sample MW-6A had a sample time of 0900 on the Chain of Custody but the sample bottles had a sample time of 0950. The sample time as noted on the Chain of Custody is correct and matches the field notes completed during sample collection.
- The reporting limits (RLs) and method detection limits (MDLs) of Analytical Resources Inc. were reviewed to ensure data quality objectives were met. The following table is a comparison of the laboratory RLs and MDLs as compared to the preliminary standards for the site. All RLs and MDLs were less than the preliminary standards.

	Preliminary Standards		Analytical Resources Inc.		
Parameter	**Method**	**(mg/L)**	**Method**	**RL (mg/L)**	**MDL (mg/L)**
Total Dissolved Solids	EPA 160.1	500	SM 2540 C	5.0	
Iron	EPA 6010B	0.3	EPA 6010C	0.050	0.0013
Manganese	EPA 6010B	0.05	EPA 6010C	0.001	0.0003
Potassium	EPA 6010B	NA	EPA 6010C	0.50	0.052
Arsenic	EPA 6020	TBD	EPA 200.8	0.0002	0.000022
Lead	EPA 6020	0.05	EPA 200.8	0.0001	0.000068

INORGANIC ANALYSES

Metals (EPA 6010/6020)	Reported		Performance Acceptable		Not Required
	NO	YES	NO	YES	
1. Holding times		X		X	
2. Reporting limits		X		X	
3. Blanks					
a. Method blanks		X		X	
b. Equipment rinsate blanks		X		X	
4. Laboratory control sample (LCS) %R		X		X	
5. Matrix spike (MS) %R		X		X	
6. LCS duplicate (LCSD) %R	X				X
7. MS duplicate (MSD) %R		X		X	
8. MS / MSD RPD		X		X	
9. LCS / LCSD RPD	X				X
10. Laboratory Duplicate RPD		X		X	
11.Field duplicate comparison		X		X	

%R – percent recovery RPD – relative percent difference

COMMENTS:

Performance was acceptable, with the following exceptions and/or notes:

- The Method Blank (BHC0702-BLK1) has a low detection of Potassium at 0.09 J mg/L. Following the Guidelines and using professional judgment, when the blank contamination is between the MDL and RL, associated results that are between the MDL and RL are qualified as non-detect (U) and reported at the RL, while detections greater than the RL do not require qualification. No qualifications were required from this method blank contamination.
- The MSD recovery of Potassium in batch BHC0702 (128%) is slightly above acceptance criteria (75-125%). However, the sample result was more than four times the spike level. Following the Guidelines and using professional judgment, no qualifications were required.
- Field duplicates were collected at MW-2A (field duplicate ID is MW-7A), Infiltration #1 (field duplicate ID is Infiltration #2), MWB-1LDA (field duplicate ID is MWB-7LDA), and MWB-6DSP (field duplicate ID is MWB-9DSP). All precision is acceptable.
- The laboratory did not provide LCSD results. This QC element is not required because sufficient precision and accuracy data was provided by the lab with laboratory duplicate, MS/MSD, and LCS analyses.

GENERAL WET CHEMISTRY

TDS (EPA 160.1)	Reported		Performance Acceptable		Not Required
	NO	YES	NO	YES	
1. Holding times		X		X	
2. Reporting limits		X		X	
3. Blanks					
a. Method blanks		X		X	
b. Equipment rinsate blanks		X		X	
4. Laboratory control sample (LCS) %R		X		X	
5. Matrix spike (MS) %R	X				X
6. LCS duplicate (LCSD) %R	X				X
7. MS duplicate (MSD) %R	X				X
8. MS/MSD RPD	X				X
9. LCS/LCSD RPD	X				X
1 0. Laboratory Duplicate RPD		X		X	
11. Field duplicate comparison		X		X	

%R – percent recovery RPD – relative percent difference

COMMENTS:

Performance was acceptable, with the following exceptions and/or notes:

- The Equipment Blank (EB) had a detection of Total Dissolved Solids at 8 mg/L. Validation guidelines do not require qualification of equipment blank data.
- Field duplicates were collected at MW-2A (field duplicate ID is MW-7A), Infiltration #1 (field duplicate ID is Infiltration #2), MWB-1LDA (field duplicate ID is MWB-7LDA), and MWB-6DSP (field duplicate ID is MWB-9DSP). All precision is acceptable.
- The laboratory did not provide LCSD, MS, or MSD results. These QC elements are not required because sufficient precision and accuracy data was provided by the lab with laboratory duplicate and LCS analyses.

RE: Ravensdale

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Associated Work Order(s)	Associated SDG ID(s)
19C0207	N/A

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 0.4 2.6 ___ ___ ___ ___

Time _____

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: D005206

Cooler Accepted by: SLF for SD Date: 3/13/19 Time: 1310

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler?		YES	(NO)
What kind of packing material was used? ... Bubble Wrap (Wet Ice) Gel Packs Baggies Foam Block Paper Other:			
Was sufficient ice used (if appropriate)?	NA	(YES)	NO
Were all bottles sealed in individual plastic bags?		(YES)	NO
Did all bottles arrive in good condition (unbroken)?		(YES)	NO
Were all bottle labels complete and legible?		(YES)	NO
Did the number of containers listed on COC match with the number of containers received?		(YES)	NO
Did all bottle labels and tags agree with custody papers?		(YES)	NO
Were all bottles used correct for the requested analyses?		(YES)	NO
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)...	NA	(YES)	NO
Were all VOC vials free of air bubbles?	(NA)	YES	NO
Was sufficient amount of sample sent in each bottle?		(YES)	NO
Date VOC Trip Blank was made at ARI	(NA)		

Was Sample Split by ARI : (NA) YES Date/Time: _____ Equipment: _____ Split by: _____

Samples Logged by: [signature] Date: 3/13/19 Time: 1440 Labels checked by: SLF

*** Notify Project Manager of discrepancies or concerns ***

Notes and Definitions

*	Flagged value is not within established control limits.
B	This analyte was detected in the method blank.
D	The reported value is from a dilution
HC	The natural concentration of the spiked analyte is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
J	Estimated concentration value detected below the reporting limit.
U	This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
[2C]	Indicates this result was quantified on the second column on a dual column analysis.
