ERTS No. 610861

Dear Mr. Acklam,

Please find the attached fully executed *Voluntary Cleanup Program Agreement*, *Voluntary Cleanup Program Application Form*, and *Terrestrial Ecological Evaluation Form* for the aforementioned subject Property.

SITE OVERVIEW HISTORY

The above referenced site has been listed in the Washington State Department of Ecology (“Ecology”) Confirmed and Suspected Contaminated Site List (“CSCSL”) after an Initial Investigation was conducted on March 4, 2009 by the Tacoma Pierce County Health Department (“TPCHD”) in response to an anonymous complaint of signs of soil contamination. The TPCHD identified three areas at the site that may contain petroleum-impacted soil. The potential release was listed under Environmental Response Tracking System (“ERTS”) 610861.

Aerotech Environmental Consulting, Inc. (“Aerotech”) submitted a Phase II Limited & Targeted Subsurface Investigation to demonstrate that current site conditions, when compared to the compliance regulations outlined in the Model Toxics Control Act (“MTCA”), as established by Ecology in Chapter 173-340 of the Washington Administrative Code (“WAC”) and implemented under RCW Chapter 70.105D, are not evident of a contaminant release at the Site.

SITE INVESTIGATION SUMMARY

Select soil samples collected from Soil Borings B1 through B7 were analyzed for the presence of total petroleum hydrocarbons as gasoline (“TPH-g”), as diesel (“TPH-d”), and as oil (“TPH-o”), selected volatile organic compounds (“VOCs”) associated with fuel and chlorinated solvents, polycyclic aromatic hydrocarbons (“PAHs”), and total lead. The analytical results were compared to MTCA compliance regulations as established by Ecology in Chapter 173-340 of the Washington Administrative Code (“WAC”) and implemented under RCW Chapter 70.105D.

None of the soil samples analyzed exhibited detections of TPH-g, TPH-d, VOCs, and PAHs above analytical method detection limits. All analytical method detection limits are at or below MTCA regulatory cleanup levels.

The laboratory analytical results show a detection of 67 milligrams per kilogram (“mg/kg”) TPH-o in the soil sample collected from between 3 and 3.5 feet bgs in Soil Boring B7. The concentration is below 2,000 mg/kg, the MTCA Method soil cleanup level for heavy oil. The greatest detection of total lead is 13 mg/kg, in the soil sample collected from 3.5 to 4 feet bgs in Soil Boring B6, below the MTCA Method A soil cleanup level of 250 mg/kg.

Based on these conditions, Aerotech is requesting the removal of the Site from the CSCSL along with confirmation of the closure of the potential release listed under ERTS 610861.

REQUEST FOR CLOSURE

Based upon the remedial investigation soil analytical data, the Site Applicant requests that a No Further Action Determination be issued through the auspices of the State of Washington Department of Ecology Voluntary Cleanup Program.

Please feel free to contact the Aerotech Geologist, Mr. Justin Foslien at (206) 257-4211, or the Aerotech Vice President, Mr. Nicholas Gerkin at (206) 482-2287 if you have any questions regarding work completed at this Site.

Sincerely,

A handwritten signature in blue ink, appearing to read "Justin Foslien".
