Aspect Consulting
Subject: Reduction in Groundwater Monitoring
Date: August 26, 2020
Attachment: Ecology Response to Request for Reduction in Groundwater Monitoring

On August 18, 2020 Ecology received your request for reduced groundwater monitoring as detailed in your Technical Memo titled "Request for Reduced Groundwater Monitoring".

This reduction in groundwater monitoring was also discussed on June 18, 2020 during a meeting between Aspect Consulting (on behalf of West Seattle Holdings LLC) and Ecology.

Your Technical Memo identifying two wells, MW112 and MW113, where we recommend discontinuing quarterly analytical sampling (but continuing groundwater elevation monitoring).

You propose that MW-112 and MW-113 be removed from the sampling and testing program, but retained for quarterly groundwater elevation measurements to allow for full Site groundwater elevation and gradient evaluation each quarter.

Ecology has reviewed your request and deems your request appropriate. Your request for reduction in groundwater monitoring is approved.

Respectfully
Dale Myers
Department of Ecology
