RE: Groundwater Quarterly Monitoring Report –June 2002  
Former Dry Cleaning Facility  
Silverdale Plaza  
Silverdale, Washington

Dear Ms. Groh:

This Groundwater Monitoring Report has been prepared by Krazan & Associates, Inc. (Krazan) for the former dry cleaning facility on the referenced property. The report describes the results of ongoing groundwater monitoring related to a release of perchloroethylene (PCE, also known as tetrachloroethylene) from the former dry cleaning facility. The property is located at 2912 NW Bucklin Hill Road, within the Silverdale Plaza complex in Silverdale, Washington (Figure 1). The work was conducted in general accordance with Krazan's June 12, 2001 proposal E01-020WAP.

#### **Site Location**

The site is located in the southwest quarter of Section 16, Township 25 North, Range 1 East, in Silverdale, Washington. The site is about 1000 feet north of the north end of Dyes Inlet (Puget Sound) at about elevation 25 feet.

#### **Project Background**

Groundwater monitoring was initiated on the site in June 1999 during a Phase II Environmental Site Assessment (Hart Crowser, 1999). Four monitoring wells were initially installed at the site (MW-1, -2, 3, and -4). Four additional wells (MW-5, -6, -7, and -8) were installed in April 2000 during a Remedial Investigation (Krazan, 2000). These investigations showed that the shallow perched aquifer had been impacted by PCE, which the data indicated had been released onto the ground surface at the rear (south side) of the former facility. A Remedial Action was conducted in October 2000 that consisted of the excavation and removal of 2,600 tons of PCE-contaminated soil. Four of the monitoring wells (MW-2, -3, -4, and -7) were removed with the surrounding soil as part of the excavation. Two monitoring wells (MW-9 and -10) were subsequently installed downgradient (west) of the excavation area. A Vapor Extraction/Air Sparging System was installed in November 2000 beneath the former dry cleaning building to address the PCE that had migrated beneath the foundation that could not be removed via the excavation.

---

#### **Offices Serving The Western United States**

The excavation and Vapor Extraction System installation are described in an Interim Closure Report (Krazan, 2001). Initiation of Vapor Extraction began in January 2001. The locations of the six existing monitoring wells are shown on the attached Figure 3, from the Interim Closure Report.

### **Monitoring Program Modification**

The quarterly monitoring program was modified following the December 2001 sampling event. Because wells MW-1, MW-5, and MW-8 are located cross gradient to the remediation area and have exhibited no impact from the PCE, they have been dropped from the quarterly monitoring schedule. Well MW-5 will be monitored on an annual basis only. This modification was approved by the Department of Ecology.

### **Groundwater Sample Collection**

A set of groundwater samples was collected from the three downgradient monitoring wells on June 21, 2002 for analysis of Halogenated Volatile Organics. Prior to sampling, the static water level was measured using an electronic sounder with an accuracy of 0.01 foot. The sounder probe was decontaminated with a detergent solution and distilled water rinse prior to each well being measured. Each well was purged to remove stagnant water and allow the well to recover with fresh aquifer water. At least three well casing volumes were removed during the purging.

Each well was sampled using a new disposable bailer and clean twine. The water samples were collected in clean, laboratory-supplied, glass containers, filled directly from the bailer. Two 40-ml vials were filled for each sample.

### **Laboratory Analysis**

The groundwater samples were submitted to CCI Analytical Laboratories in Everett, Washington, for analysis of Halogenated Volatile Organics (the 8010 list) by EPA Method 8260A, in EPA Test Methods for Evaluating Solid Waste Physical/Chemical Methods (SW-846).

### **Environmental Monitoring Results**

No Halogenated Volatile Organics were detected in the groundwater from any of the monitoring wells. The accumulated groundwater sampling results to date have been tabulated sequentially for each monitoring well. These tables follow the text of this letter. The groundwater laboratory report and chain-of-custody form from this sampling event are attached to this letter.

### **Limitations**

The findings of this report were based upon the results of field and laboratory investigations, coupled with the interpretation of surface and subsurface conditions associated with our water samples. Therefore, the data are accurate only to the degree implied by review of the data obtained and by professional interpretation.

A laboratory certified by the State of Washington, Department of Ecology, did the analytical testing. The results of the chemical testing are accurate only to the degree of care of ensuring the testing accuracy and the representative nature of the water samples obtained.

The findings presented herewith are based on professional interpretation using state of the art methods and equipment and a degree of conservatism deemed proper as of this report date. It is not warranted that such data cannot be superseded by future geotechnical, environmental, or technical developments.

We appreciate the opportunity to be of service. If you have any questions, please do not hesitate to contact our office at (360) 598-2126.

Respectfully submitted,  
KRAZAN & ASSOCIATES, INC.
