INTRODUCTION

Public participation plans promote meaningful involvement during cleanups. This plan describes the tools the Washington State Department of Ecology (Ecology) will use to inform the public about and gather input on the K Ply cleanup.

SITE LOCATION

The K Ply site is located at 439 Marine Drive in Port Angeles.

Figure 1. K Ply Site Location

Legend	
Cleanup site	
Property line	

SITE BACKGROUND

From 1941 - 2011, different owners operated a plywood mill on the K Ply property. It was most recently operated as Peninsula Plywood, or PenPly. The Port of Port Angeles (port) owns the property. The former mill structures are now vacant.

Past operations contaminated soil and groundwater. Known site contaminants include:

- Diesel-, oil-, and gasoline-range petroleum hydrocarbons.
- Benzene, ethylbenzene, toluene, and xylenes. These liquids are found in petroleum products and some manufacturing processes.
- Pentachlorophenol (PCP), a chemical used in some wood treating processes.

You can find more information about site pollutants and their health effects at <http://www.atsdr.cdc.gov> and <http://www.epa.gov>.

Cleanup Background: In 2005, Ecology entered into an agreed order with the port for the Marine Trades Area site, which then included the K Ply property. Since then, investigations have shown that there are separate sources of contamination on the Marine Trades Area and K Ply properties.

As a result, Ecology is separating K Ply off as its own site and signing a new agreed order with the port. Ecology will also amend the Marine Trades Area agreed order to reflect this change.

Rayonier operated a plywood mill on the K Ply property from 1971 - 1989. During that time, a hydraulic oil leak contaminated a part of the site. Rayonier is under an order to clean up the hydraulic oil contamination.

CURRENT ACTIVITY

In fall 2012, Ecology is holding a public comment period on a new agreed order with the port for the site. The order requires the port to:

- Do an **interim action** (see below).
- Develop a **remedial investigation and feasibility study (RI/FS)**. The RI/FS will describe the nature and extent of contamination and evaluates possible final cleanup options.
- Develop a **draft cleanup action plan (draft CAP)**. The draft CAP will describe how the port will clean up contamination and how the cleanup will meet state standards.

During the interim action (partial cleanup), the port will:

- Tear down and remove mill buildings and structures, allowing them to complete site investigations.
- Use erosion and stormwater controls to keep contamination from moving into Port Angeles Harbor.

- Only remove contaminated soil if it is an immediate threat to human health or the environment.
- Take soil samples to confirm areas that need to be stabilized. Cover and stabilize contaminated soil to protect groundwater.
- Monitor groundwater and stormwater every three months.

The interim action plan, which will also be available for comment in fall 2012, describes this work in more detail. Because the mill structures are fire and safety hazards, the port plans to begin the interim action during the comment period.

Ecology will review comments as we receive them and consider them in moving forward with the interim action and investigations. Then:

- At the end of the comment period, Ecology will respond to comments in a responsiveness summary. We will send this document to those who commented and post it online.
- If needed, we will make changes to the agreed order and work plans based on comments.
- After completing the interim action, the port will begin work on the remedial investigation, feasibility study, and draft cleanup plan.

SITE CLEANUP PROCESS

Cleanup activities at the K Ply site fall under Washington's Model Toxics Control Act (MTCA) and accompanying regulations (Revised Code of Washington (RCW) 70.105D and Washington Administrative Code (WAC) 173-340). MTCA has procedures for cleaning up contaminated sites to standards that are safe for both human health and the environment.

Toxic sites are cleaned up in stages, described below. Each stage has a related report or plan that the public is welcome to review and comment on.

Remedial Investigation & Feasibility Study (RI/FS)

The RI looks at the extent and type of pollution on the site. It also looks at possible human health and environmental impacts. The FS identifies and evaluates different cleanup options.

Interim Actions

Ecology may allow interim actions to partly clean up a site before the final cleanup plan is complete.

Cleanup Action Plan (CAP)

The CAP describes the cleanup methods and how they will meet Ecology's cleanup standards.

Cleanup

Cleanup removes contaminants from the site, contains them on the site, or treats them to make them less toxic. Based on the information in the RI/FS, Ecology selects a cleanup action and develops a new legal agreement for cleanup. CAPs require a public comment period.

Delisting

Ecology keeps track of toxic cleanup sites on the Hazardous Sites List. Once cleanup is complete, the public will have a chance to comment before Ecology takes a site off the list.

You can find more information about toxic cleanups on Ecology's website:
http://www.ecy.wa.gov/programs/tcp/cu_support/cu_process_steps_defns.htm.

PUBLIC PARTICIPATION ACTIVITIES AND RESPONSIBILITIES

The purpose of this Public Participation Plan is to promote public understanding and participation in the cleanup. This section of the plan describes how Ecology will share information and receive public comments on cleanup activities. Ecology will use the following public involvement activities during the K Ply site cleanup:

Formal Public Comment Periods

Comment periods are the primary method Ecology uses to get feedback from the public on proposed cleanup decisions. Comment periods usually last 30 days. WAC 173-340-600 requires them at key points during the investigation and cleanup process, before final decisions are made. During a comment period, the public can comment in writing. Ecology can only take verbal comments during a public hearing.

After comment periods, Ecology reviews all comments and may respond in a document called a responsiveness summary. Ecology considers whether a document or decision needs to be changed or revised based on public input. If there are major changes, Ecology may hold a second comment period. If there are no major changes, Ecology finalizes the draft document(s).

Public Meetings and Hearings

Ecology may hold public meetings at key points during the investigation and cleanup. Ecology also may offer public meetings for actions expected to be of particular interest to the community. Ecology will also hold a public meeting if ten or more people request one. These meetings will be at places and times convenient to the public.

Information Repositories

These are places where the public can read and review site information, including public comment period documents. Ecology has three repositories for this site:

- Port Angeles Library, 2210 South Peabody Street, Port Angeles, WA 98362. (360) 417-8500.
- Peninsula College, 1502 E. Lauridsen Blvd., Port Angeles, WA 98362. (360) 417-6280.
- Washington State Department of Ecology, 300 Desmond Drive, Lacey 98516. Please call (360) 407-6045 for an appointment.

See also Ecology's website: <https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=28>.

Site Register

Ecology's Toxics Cleanup Program uses its bimonthly Site Register to announce public meetings and comment periods, and many other activities. To receive the Site Register by e-mail, contact Seth Preston at (360) 407-6848 or Seth.Preston@ecy.wa.gov. You can also read it on Ecology's website at http://www.ecy.wa.gov/programs/tcp/pub_inv/pub_inv2.html.

Mailing List

Ecology's mailing list for this site includes neighboring landowners and businesses, public agencies, and other known interested parties. Ecology's Southwest Regional Office maintains the list and will update it as needed. Please contact Diana Smith at (360) 407-6255 or Diana.Smith@ecy.wa.gov if you would like to have your address added to or deleted from this mailing list.

Fact Sheets

Ecology will mail fact sheets to people and groups interested in this cleanup. Fact sheets will announce comment periods and public meetings. Ecology also may mail fact sheets with updates on cleanup progress.

Newspaper Display Ads

Ecology will place ads in *The Peninsula Daily News* to announce public comment periods and public meetings for the site.

Plan Update

Ecology may update this Public Participation Plan as the project moves forward. The public will have a chance to comment on any major changes to the plan.

Contacts

If you have questions or need more information about this plan or the K Ply cleanup site, please contact:

Connie Groven, Site Manager

WA Department of Ecology
PO Box 47775
Olympia, WA 98504-7775
Tel: (360) 407-6254
Email: Connie.Groven@ecy.wa.gov

Diana Smith, Public Involvement Coordinator

WA Department of Ecology
PO Box 47775
Olympia, WA 98504-7775

Email: Diana.Smith@ecy.wa.gov

GLOSSARY

Agreed Order: A legal agreement between Ecology and a Potentially Liable Person (see below) to conduct work toward a cleanup.

Cleanup: Actions that deal with a release or threatened release of hazardous substances that could affect public health or the environment. Ecology often uses the term "cleanup" broadly to describe response actions or phases of cleanup, such as the Remedial Investigation/Feasibility Study.

Cleanup Action Plan (CAP): A plan that explains which cleanup option(s) will be used at a site. The Remedial Investigation and Feasibility Study provide the data and analysis to write a CAP. It also takes into account public comments and public concerns.

Comment Period: A time period during which the public can review and comment on various documents and proposed actions. For example, a comment period may be provided to allow community members to review and comment on proposed cleanup action alternatives and proposed plans.

Contaminant: Any hazardous substance that does not occur naturally or occurs at greater than natural background levels

Feasibility Study: This study develops and evaluates cleanup options for a given site.

Groundwater: Water found beneath the earth's surface that fills spaces between materials such as sand, soil, or gravel. In some aquifers, ground water occurs in large enough amounts to be used for drinking water, irrigation and other purposes.

Information Repository: A file containing site information and reports for public review. It is usually located in a public building convenient for local residents, such as a public school, city hall, or library.

Model Toxics Control Act (MTCA): A law passed by Washington voter initiative in 1988. Its purpose is to find, investigate, and clean up places where hazardous substances have been released. It defines Ecology's role and encourages public involvement in cleanup decisions.

Potentially Liable Person: Any individual(s) or company(s) potentially responsible for, or contributing to, the contamination problems at a site. Whenever possible, Ecology requires PLPs to clean up sites.

Public Notice: At a minimum, adequate notice mailed to all persons who have made a timely request of Ecology and to persons residing in the potentially affected vicinity of the proposed action; mailed to appropriate news media; published in the local (city and county) newspaper of largest circulation; and the opportunity for the interested persons to comment.

Public Participation Plan: A plan prepared to encourage coordinated and effective public involvement designed to the public's needs at a particular site.

Remedial Investigation: This study characterizes the site and defines the extent of contamination.

Remedial Investigation/Feasibility Study: Two distinct but related studies. They are usually performed at the same time, and together referred to as the "RI/FS." They are intended to:

- Gather the data necessary to determine the type and extent of contamination;
- Establish criteria for cleaning up the site;
- Identify and screen cleanup alternatives for remedial action; and
- Analyze in detail the technology and costs of the alternatives.

Responsiveness Summary: A summary of oral and/or written public comments received by Ecology during a comment period on key documents, and Ecology's responses to those comments. The responsiveness summary is especially valuable during the Cleanup Action Plan phase at a site when it highlights community concerns.

Risk: The probability that a hazardous substance, when released into the environment, will cause an adverse effect in the exposed humans or living organisms.

Sediments: Settled particles located at the bottom of a lake, river or in wetlands. Sediment(s) also includes settled particulate matter exposed by human activity (e.g., dredging) to the biologically active aquatic zone or to the water column.

Site: Any area where a hazardous substance, other than a consumer product in consumer use, has come to be located.

Toxicity: How much harm a substance causes to living organisms, including people, plants and animals, at a certain concentration.
