Pace Laboratories On-Site Laboratory Case Narrative

Report Date	June 7, 2016
Client	CH2M Hill
Site/ Project Name	Freeman WA – Cenex Harvest Lease Site
Location	Freeman, Washington
Dates of Service	May 9, 2016 to May 27, 2016
Test Method Reference	LAM-010 VOCs by 8260 Direct Inject SIM
Pace Project Number	2754

1. Introduction

Pace Analytical – Mobile Lab Services (Pace) mobilized to the referenced site to provide analytical chemistry support during site investigation activities. The compounds of concern for the site are carbon tetrachloride and chloroform. The reported analytes for the project were the full list of VOC analytes reported under the 8260 Direct Inject SIM method. The laboratory analyzed 194 soil samples for the VOC Direct Inject analysis while on site. Since all of the VOC samples were prepared / analyzed upon receipt by the laboratory, all method holding times were met. The Pace Lead Chemists were Jason Worden and Ben Claas, and the Pace project manager was Patrick Letterer.

2. Pace Method Summary

- Soil samples were analyzed for the VOC analytes in accordance with Pace standard operating procedure (SOP) listed above.
- Two Lock N’ Load containers were received for each soil sample. The samples were immediately logged in on Pace chain of custody (COC) and prepared.
- An eight point calibration was performed with verification by an independent second source standard.
- Internal standards and surrogates were added to all samples to verify the accuracy of individual sample results.
- Samples and standards were analyzed by direct injection into the GCMS system.
- Pace performed all analyses using HP 5890 gas chromatograph (GC) systems with Hewlett-Packard (HP) 5972 mass spectrometer.

3. Quality Control Summary

Initial Calibration	For the VOCs, an initial calibration curve was prepared at eight concentrations. (10, 25, 50, 200, 500, 2000, 5000 and 10000 ng/mL).
Continuing Calibration	The instrument calibration was verified every 10 injections and at the end of a run. All continuing calibration checks were acceptable except where qualified.
Method Blanks	The method blanks that were analyzed each day were free of contamination.
Laboratory Control Samples	The recoveries for the constituents of concern were acceptable except where qualified.
MS/MSD	The recoveries for the constituents of concern were acceptable except where qualified.

4. Analytical Reports

All field-generated results were confirmed through the standard Pace review process and no sample results have changed from draft to final. Appendix A contains analytical results for the project in summary format. Appendix B contains full analytical reports for each sample along with quality control sample results. Appendix C contains chain of custody documentation.

Pace Laboratories On-Site Laboratory Case Narrative

Report Date	July 14, 2016
Client	CH2M Hill
Site/ Project Name	Freeman WA – Cenex Harvest Lease Site
Location	Freeman, Washington
Dates of Service	June 27, 2016 to July 1, 2016
Test Method Reference	LAM-010 VOCs by 8260 Direct Inject SIM
Pace Project Number	2754

1. Introduction

Pace Analytical – Mobile Lab Services (Pace) mobilized to the referenced site to provide analytical chemistry support during site investigation activities. The compounds of concern for the site are carbon tetrachloride and chloroform. The reported analytes for the project were the full list of VOC analytes reported under the 8260 Direct Inject SIM method. The laboratory analyzed 93 soil samples for the VOC Direct Inject analysis while on site. Since all of the VOC samples were prepared / analyzed upon receipt by the laboratory, all method holding times were met. The Pace Lead Chemist was Jason Worden, and the Pace project manager was Patrick Letterer.

2. Pace Method Summary

- Soil samples were analyzed for the VOC analytes in accordance with Pace standard operating procedure (SOP) listed above.
- Two Lock N’ Load containers were received for each soil sample. The samples were immediately logged in on Pace chain of custody (COC) and prepared.
- An eight point calibration was performed with verification by an independent second source standard.
- Internal standards and surrogates were added to all samples to verify the accuracy of individual sample results.
- Samples and standards were analyzed by direct injection into the GCMS system.
- Pace performed all analyses using HP 5890 gas chromatograph (GC) systems with Hewlett-Packard (HP) 5972 mass spectrometer.

3. Quality Control Summary

Initial Calibration	For the VOCs, an initial calibration curve was prepared at eight concentrations. (10, 25, 50, 200, 500, 2000, 5000 and 10000 ng/mL).
Continuing Calibration	The instrument calibration was verified every 10 injections and at the end of a run. All continuing calibration checks were acceptable except where qualified.
Method Blanks	The method blanks that were analyzed each day were free of contamination.
Laboratory Control Samples	The recoveries for the constituents of concern were acceptable.
MS/MSD	The recoveries for the constituents of concern were acceptable except where qualified.

4. Analytical Reports

All field-generated results were confirmed through the standard Pace review process and no sample results have changed from draft to final. Appendix A contains analytical results for the project in summary format. Appendix B contains full analytical reports for each sample along with quality control sample results. Appendix C contains chain of custody documentation.
