SUBJECT: Draft Groundwater Sampling and Analysis Report – 1st Quarter, 2007 for the Camp Bonneville Facility located in Vancouver Washington

Dear Mr. Gage:

This letter and its attachments constitute the Draft Groundwater Sampling and Analysis Report – 1st Quarter, 2007 for submittal to the Washington Department of Ecology. Attached to this letter are:

- 1) Figures 1 and 2,
- 2) Landfill 4/Demolition Area 1 Groundwater Data,
- 3) Draft Groundwater Sampling and Analysis Report – 1st Quarter, 2007 by PBS Engineering and Environmental (PBS), and
- 4) Electronic copies of the submittal on CD.

Following your review, please forward two copies of the entire submittal to the following:

Mr. Ben Amoah-Forson, Ph.D., P.E.
Washington State Department of Ecology
Toxics Cleanup Program
PO Box 47600
300 Desmond Drive
Olympia, Washington 98504

Recent Groundwater Sampling Results at Boundary Area/Sentinel Wells

Upon review of historic groundwater data at Landfill 4/Demolition Area 1, the following appears to be occurring at the site:

- Perchlorate concentrations in wells located in close proximity to the landfill excavation (LF4-MW-2A&B) are experiencing significant fluctuations both seasonally and over time.
- Perchlorate concentrations in wells with perchlorate detections (LF4-MW-3 A&B, LF4-MW-4 A, and LF4-MW-5A) are experiencing less severe fluctuations both seasonally and over time.

ChallengeUs.

Mr. Mike Gage
June 1, 2007
Draft Groundwater Sampling and Analysis Report – 1st Quarter, 2007
Camp Bonneville, Vancouver Washington
Page 2

- Perchlorate concentrations (or non-detections) in the remaining wells (LF4-M2-1A&B, LF4-MW-17, and LF4-MW-18) have had little change throughout the monitoring period.
- There was an increase at LF4-MW7B that will be confirmed during the 2nd Qtr 2007 sampling event scheduled for June 2007.
- The remaining volatile organic compound (VOC) detections have had little variation throughout the monitoring period with the exception of slight variations at well LF4-MW-2B.

Additional evaluations of the groundwater data for the Boundary Area/Sentinel wells and the Landfill 4/ Demolition Area 1 wells will be included in subsequent quarterly reports and ultimately in the Remedial Investigation/Feasibility Study (RI/FS) for RAU 2C and RAU 3 for groundwater.

Groundwater detections for VOCs are summarized in the attached tables and figures and monitoring well locations are shown on Figures 1 and 2. Completed details for the latest sampling event are included in the Attachment 3 – Draft Groundwater Sampling and Analysis Report – 1st Quarter, 2007.

If you have any questions, please contact me at (219) 736-0263.

Very truly yours,

MICHAEL BAKER JR., INC.

1.0 INTRODUCTION

This report documents the results of groundwater sampling and analysis at two locations of monitoring well installations at Camp Bonneville. The sampling and analysis was conducted for the 1st quarter of 2007. This work was performed by PBS Engineering and Environmental (PBS), Portland, Oregon, under contract to Michael Baker, Jr., Inc. (Baker). The work was performed at the Camp Bonneville Military Reservation (Camp Bonneville) northeast of Vancouver, Washington (Figure 1). Camp Bonneville is a former United States government military facility that was selected for closure under the Base Realignment and Closure (BRAC) authorization.

As part of the early transfer process for Camp Bonneville Military Reservation (CBMR), the U.S. Department of the Army (Army) and Clark County, Washington (Clark County), along with the Bonneville Conservation, Restoration, and Renewal Trust LLC (BCRRT), negotiated an Environmental Services Cooperative Agreement (ESCA). The groundwater monitoring program is a component of the remedial action services performed in support of the Conservation, Restoration and Renewal Program (CRRP) associated with the facility. The CRRP includes those activities necessary to obtain Notice(s) of Completion, Site Closeout(s), and CERCLA Warranty(ies) for reconveyance of the CBMR from the BCRRT to Clark County. These additional remedial actions address requirements contained in agreements between the BCRRT and the Washington State Department of Ecology (WDOE).

The groundwater monitoring work was performed in general accordance with the Sampling and Analysis Plan (SAP) dated October 31, 2006, the Health and Safety Plan (HASP) dated October 2006, and the Quality Assurance Project Plan (QAPP) dated November 3, 2006. Laboratory analytical services were provided by Laucks Testing Laboratories, Seattle, Washington, under contract to PBS.

1.1 Project Objectives

The overall objectives of site investigations at Camp Bonneville, which have been previously conducted as part of the U.S. Army BRAC process, have been to identify contaminated areas and determine the next appropriate steps toward restoration of those sites. This quarterly monitoring report describes the results of ongoing environmental monitoring of groundwater parameters at two areas at Camp Bonneville. Monitoring wells have been installed in these areas to monitor shallow and deeper groundwater to maximum depths of approximately 75 feet below the ground surface.

The sites that were monitored include one old landfill/demolition area (Landfill 4/Demo Area 1) and the Camp Bonneville base boundary at Lacamas Creek. Two other demolition areas (Demolition Areas 2 and 3) were previously monitored, but were deleted from the monitoring program per agreement with WDOE in 2006. Investigation activities included groundwater sampling at the old landfill and demolition area, and the area where Lacamas Creek exits the southwest side of the base. These investigations were conducted in general accordance with the SAP, with adjustments made in the field to accommodate site conditions. The analytical results obtained from groundwater samples collected at the various monitoring wells locations were compared with screening levels established for the site to determine if the groundwater potentially poses an unacceptable environmental risk. Cleanup levels established by WDOE under the Model Toxics Control Act (MTCA) have been used as screening criteria to evaluate the levels of contaminants detected at Camp Bonneville.

1.2 Scope of Work

PBS conducted a round of groundwater sampling at 19 existing monitoring wells for the 1st Quarter 2007 sampling event (March 2007). Sampling for this quarter was performed from March 19 to 22, 2007. The wells were purged and sampled utilizing low-flow, minimal drawdown procedures described in this report and based on procedures described in detail in the SAP which referenced the USACE standard operating procedure, "Low-Flow Groundwater Purging and Sampling".

Previous sampling events through the 2nd quarter of 2006 sampled a total of 27 wells in the areas listed below, with their associated Remedial Action Unit (RAU) designations. The Lacamas Creek area contains four sets of paired shallow and deep wells (8 total wells) in a north-south alignment along the base boundary (Figure 3). Demolition Area 3 contains four shallow wells and one deep well located around the perimeter of a pond within a former blast pit. Demolition Area 2 has three wells located near the access road, a creek, and a pond. Landfill 4/Demo Area 1 has five shallow and three deep wells around the perimeter of the landfill, one deep well along North Fork Lacamas Creek downstream of the landfill, and two wells along the creek at the base of the drainage ravine (Figure 4).

- Landfill 4 / Open Burning/Demolition Area 1 (RAU 2C)
- Open Burning / Open Demolition Area 2 (RAU 2B)
- Open Burning / Open Demolition Area 3 (RAB 2B)
- Base Boundary at Lacamas Creek (Site-wide Groundwater)

Starting in the 3rd Quarter 2006 sampling event (September 2006), the monitoring wells at Demolition Area 2 and Demolition Area 3 were deleted from the sampling program. The Washington Department of WDOE authorized deletion of these monitoring wells on the basis of the previous quarters of sampling results showing no detections exceeding the MTCA cleanup levels for the contaminants of concern. The monitoring wells at Landfill 4/Demo Area 1 and the Base Boundary at Lacamas Creek, a total of 19 wells, were also sampled in the 4th Quarter 2006.

1.3 Report Organization

This report is organized into eight sections, with four appendices containing supporting information. A brief description of each section follows.

- **Section 1 – Introduction.** An introduction to the project, a description of the work scope, and a review of the report organization is provided.
- **Section 2 – Site Background.** A description of the facility and a summary of its history are provided. The groundwater investigation reports are referenced. The groundwater sampling locations discussed in this report are presented, along with the chemicals of potential concern in groundwater.
- **Section 3 – Groundwater Sampling.** Descriptions of the field investigation, sampling techniques, and sample handling methods are provided.
- **Section 4 – Analytical Methods.** The field and laboratory analytical testing methods are presented.
- **Section 5 – Data Management and Review.** The data quality control procedures and Washington MTCA cleanup program information are presented.
- **Section 6 – Groundwater Monitoring Results.** A description of sample collection activities performed at each site, along with a summary of the results from these activities, is provided. Contaminants detected at each site are identified and compared with screening levels.
- **Section 7 - Recent Trends in Groundwater Quality.** Presents an analysis of the change in certain analytical results.

- **Section 8 – Data Quality Objectives.** Chemical data quality and laboratory narratives of test procedures are discussed.
- **Section 9 – References.** A list of documents used in preparation of this report is provided.
- **Appendix A – Field Parameters and Laboratory Analysis Data Tables.** Summary tables of field and laboratory analysis data, including MTCA Cleanup Levels.
- **Appendix B – Laucks Testing Laboratories, Analytical Reports.** Copies of the laboratory reports are provided on CD disk, organized by laboratory data package.
- **Appendix C – Monitoring Well Boring Logs.** Copies of the boring logs for the groundwater monitoring wells are included.
- **Appendix D – Previous Quarterly Groundwater Monitoring Report Tables.** Previous groundwater monitoring report tables by PBS are included on the enclosed CD disk.

2.0 SITE BACKGROUND

2.1 Site History

Camp Bonneville comprises approximately 3,820 acres and is located in southwestern Washington, approximately 10 miles northeast of Vancouver, Washington. The Department of the Army used Camp Bonneville for live fire of small arms, assault weapons, artillery, and field and air defense artillery between 1910 and 1995. Since 1947, Camp Bonneville has also provided training for a variety of military and nonmilitary units, including National Guard, Army Reserves, and U.S. Air Force, and federal, state, and local law enforcement agencies. Camp Bonneville includes approximately 820 acres of land leased from the State of Washington Department of Natural Resources (DNR). The Federal Bureau of Investigation (FBI) used one firing range on the site for training until late 2006. The Camp Bonneville site location is shown in Figure 1. The general areas of groundwater investigation are shown in Figure 2.

In July of 1995, Camp Bonneville was selected for closure under the 1995 Base Realignment and Closure (BRAC) process. The Camp Bonneville Draft Reuse Plan (Otak, September 1998; updated 2003) called for the majority of Camp Bonneville to be transferred to Clark County for the public benefit – education, law enforcement, and parks, with no financial gain to Clark County. The 840 acres currently leased from the Washington DNR would either be returned to the State, the lease renewed, or the property purchased and transferred to Clark County. Transfer of the site to The Trust for Public Lands, and subsequently to Clark County, began in 2006. The facility was transferred from the Army to Clark County and from the County to the Bonneville Conservation Restoration and Renewal Team (BCRRT) on October 3, 2006. BCRRT and Clark County entered into a Prospective Purchaser Consent Decree with the Washington Department of Ecology (WDOE) that requires investigating and remediating the site. Clark County intends to use the site as a Regional Park and Wildlife Refuge.

Through the years, several ordnance and explosive (OE) items have been found within Camp Bonneville's boundaries. Recent OE characterization, sampling, and removal efforts performed at Camp Bonneville confirmed the presence of OE at the site. Some of these OE items were determined to be unexploded ordnance (UXO).

2.2 Previous Investigations

During previous investigations (Shannon & Wilson, 1999), shallow monitoring wells were installed at Camp Bonneville at four sites: Landfill 2, Landfill 3, the Pesticide Mixing/Storage Building, and the Former Sewage Pond. Additional shallow and deep wells were installed at Landfill 4, Demolition Area 2, Demolition Area 3, and the Base Boundary at Lacamas Creek. The groundwater monitoring wells are located in areas of documented disposal of unexploded ordnance (UXO). However, the areas of the wells

were cleared of UXO prior to well installation. Groundwater sampling activities were conducted only in the immediate area of the wells, and did not occur in areas that have not been previously checked and cleared of UXO.

Groundwater sampling and analysis was previously conducted by consultants other than PBS on a quarterly schedule basis in 2001 and 2002 at the following sites within Camp Bonneville:

- Landfill 4 / Open Burning / Demolition Area 1
- Open Burning / Open Demolition Area 2
- Open Burning / Open Demolition Area 3
- Base Boundary at Lacamas Creek

Quarterly sampling from shallow and deep monitoring wells at Landfill 4 was conducted in July and October 2001, and January and April 2002. Previous chemical analysis of groundwater samples has included explosives, perchlorate, metals, volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and fuel residues (gasoline and diesel range petroleum hydrocarbons).

Groundwater sampling was conducted by PBS, under contract to the U.S. Army BRAC Division, for the 4th Quarter 2003, 1st Quarter 2004, 2nd Quarter 2004, 3rd Quarter 2004, 4th Quarter 2004, 1st Quarter 2005, 2nd Quarter 2005, 3rd Quarter 2005, 4th Quarter 2005, 1st Quarter 2006, 2nd Quarter 2006, and 3rd Quarter 2006. A total of twenty-five monitoring wells were sampled during the 4th Quarter 2003 and 1st Quarter 2004 events at Landfill 4/Demolition Area 1, Demolition Area 2, Demolition Area 3, and the Base Boundary at Lacamas Creek. Two additional monitoring wells near Landfill 4/Demolition Area 1 were installed in May 2004, and added to the sampling set for subsequent quarterly monitoring events (through 3rd Quarter 2006). Laboratory analyses included TPH-Gx (gasoline), TPH-Dx (diesel), VOCs, SVOCs, explosive compounds (including HMX, RDX, NG, and PETN), picric acid, perchlorate, priority pollutant metals (total and dissolved), TOC, DOC, TSS, alkalinity, and inorganic ions.

In May 2004, PBS supervised installation of two additional groundwater monitoring wells along North Fork Lacamas Creek below Landfill 4 (PBS, 2004b). The monitoring well completed in bedrock (well number L4-MW17) was located at the west side of North Fork Lacamas Creek, at a point where the creek exits the ravine below Landfill 4. The monitoring well completed in alluvium (well number L4-MW18) was located at the east side of North Fork Lacamas Creek near the bottom of the ravine and above the junction of an east-trending tributary stream to Lacamas Creek.

PBS's final Groundwater Sampling and Analysis Reports, completed under the Army BRAC contract and listed in the References section of this report, present the results of each of the quarterly sampling events from the 4th Quarter 2003 through the 3rd Quarter 2006 sampling and analysis events. The last sampling event performed under the Army BRAC contract was for the 3rd Quarter 2006. PBS began groundwater sampling and analysis under contract to Michael Baker Jr., Inc. starting with the 4th quarter 2006. The results of the 4th Quarter 2006 sampling and analyses were presented in PBS's draft report, "Groundwater Sampling and Analysis Report, 4th Quarter 2006, Camp Bonneville, Vancouver, Washington", dated March 28, 2007 (PBS, 2007b).

2.3 Monitoring Well Numbering

Different numbers have been assigned over time to monitoring wells at the Base Boundary at Lacamas Creek, Demolition Area 2, and Demolition Area 3. Well numbers used by PBS in monitoring reports for the 4th Quarter 2003, the 1st Quarter 2004, and the 2nd Quarter 2004 were based on proposed well locations and well identifiers, as presented in the PBS-Army BRAC Contract documents. The actual well numbers

were assigned by the U.S. Army Center for Health Promotion and Preventative Medicine (CHPPM) when the wells were installed. The CHPPM well identifiers are the numbers on the well caps. Remedial Investigation (RI) reports previous to PBS' reports have used the well numbers assigned by CHPPM. Washington State Department of Ecology well tag numbers are consistent across both numbering systems.

Table 8 shows the monitoring well numbers used by PBS (per the PBS-Army BRAC Contract document), Washington State Department of Ecology well tag numbers, well locations, total depth, screened interval, and CHPPM well identification numbers used in former RI reports for Camp Bonneville.

The laboratory analysis results (Appendix A) included in this monitoring report for the 1st Quarter 2007 are referenced to the monitoring well numbers assigned by CHPPM. The well numbers used in the PBS quarterly reports are cross-referenced to the CHPPM numbers and the WDOE well tag numbers in Table 8.

2.4 Groundwater Monitoring Locations

For the 1st Quarter 2007, PBS conducted groundwater sampling and analysis for monitoring wells at Landfill 4 and the Base Boundary at Lacamas Creek. The locations of monitoring wells at these sites are shown on Figure 3 (Base Boundary at Lacamas Creek) and Figure 4 (Landfill 4/Demo Area 1). The monitoring wells at the sites are listed below (S = shallow well; D = deep well) according to the CHPPM numbers :

- Base Boundary at Lacamas Creek
 - Paired wells: LC-MW01S and LC-MW01D
 - Paired wells: LC-MW02S and LC-MW02D
 - Paired wells: LC-MW03S and LC-MW03D
 - Paired wells: LC-MW04S and LC-MW04D

- Landfill 4 / Demo Area 1
 - Paired wells: L4-MW01A (shallow) and L4-MW01B (deep)
 - Paired wells: L4-MW02A (shallow) and L4-MW02B (deep)
 - Paired wells: L4-MW03A (shallow) and L4-MW03B (deep)
 - L4-MW04A (shallow)
 - L4-MW05A (shallow)
 - L4-MW07B (deep)
 - L4-MW17 (in bedrock)
 - L4-MW18 (in alluvium)

2.5 Chemicals of Potential Concern

Previous site studies have determined that the upgradient areas of Camp Bonneville may contain exploded ordnance (EO) and unexploded ordnance (UXO). The historical uses of the upgradient areas include firing ranges, a landfill, open burning locations, open detonation locations, and general maintenance facilities. Chemicals of potential concern in groundwater include artillery propellants, high explosives residue, missile/rocket propellants, petroleum hydrocarbons, semi-volatile organic compounds (SVOCs), volatile organic compounds (VOCs), and metals.

A summary of chemicals of potential concern (COPC) is presented in Table 1. Specific analytes and laboratory analysis methods are presented in Table 2. Sample container types, preservation techniques, and holding times for the chemical analyses are presented in Table 3.

TABLE 1. CHEMICALS OF POTENTIAL CONCERN

Sampling Areas	Munition Compound Classes	High Explosives and Organic Compounds	Artillery Propellants	Other
Landfill 4 Demolition Areas Base Boundary	<ul style="list-style-type: none"> • Artillery Propellants • HE • Missile/Rocket Propellants 	<ul style="list-style-type: none"> • TNT • RDX • PETN • PA • HMX • NG 	<ul style="list-style-type: none"> • Black Powder (nitrate) • Plasticizers • Stabilizers • AP 	<ul style="list-style-type: none"> • Priority Pollutant Metals • TPH • SVOCs • VOCs

Notes:

AP = ammonium perchlorate

Black powder is a mixture of potassium or sodium nitrate, charcoal, and sulfur.

Plasticizers = dibutylphthalate; diethylphthalate

Stabilizers = diphenylamine; N-nitrosodiphenylamine

HE = high explosives; 2,4 DNT, 2,6 DNT

HMX = octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine

NG = nitroglycerine

PA = picric acid

PETN = pentaerythritol tetranitrate

RDX = hexahydro-1,3,5-trinitro-1,3,5-triazine (Cyclonite)

TNT = 2,4,6-trinitrotoluene

TPH = total petroleum hydrocarbons

VOCs = volatile organic compounds

SVOCs = semivolatile organic compounds

TABLE 2. ANALYTES AND ANALYTICAL METHODS

PARAMETER	METHOD
Total Priority Pollutant Metals	SW-846 6020/7000 series
Total Priority Pollutant Metals (field filtered)	SW-846 6020/7000 series
VOCs plus TICs	SW-846 8260B

Explosives	8330 Modified HPCL	500 mls	1 L. AG	No additional	7 days to extraction, 40 days after extraction

Notes:

HDPE = High Density Polyethylene Bottles with Teflon lined screw cap

AG = Amber glass bottle with Teflon lined screw cap

CWM = Clear Wide Mouth with Teflon lined screw cap

VOA vial = vial with a screw cap with a hole in the center sealed with a TFE-faced silicone septum

ml = milliliters

3.0 GROUNDWATER SAMPLING

PBS conducted groundwater sampling for the 1st Quarter 2007 event at 19 existing monitoring wells at two locations within Camp Bonneville. Monitoring wells were sampled during the period of March 19 to 22, 2007. The monitoring wells were sampled in accordance with the procedures established in the Draft Groundwater Sampling and Analysis Plan (SAP), dated October 31, 2006, prepared by PBS and Michael Baker Jr., and submitted to WDOE. Health and safety procedures followed during site activities were in compliance with the procedures established in the Site Health and Safety Plan (HASP) prepared by Michael Baker Jr. and approved by WDOE.

3.1 Well Depth and Static Water Level Measurement

The static groundwater level was measured in each monitoring well using an electronic water level indicator. Water level measurements for the monitoring wells were obtained immediately before collection of groundwater samples from each of the monitoring wells. Prior to sampling at each of the sampling areas, well caps for all monitoring wells were removed and refitted loosely so that the water level would equilibrate with atmospheric pressure by the time of purging and sampling. Groundwater level measurements are presented in Table 7.

Water level depths were measured to the reference mark on the rim of the PVC monitoring well casings. The measurement was recorded in the field logbook to a precision of 0.01 foot. After measuring the depth to water, the total depth of the monitoring well was measured by slowly lowering the probe to the bottom of the casing. The measured total depth of the casing was compared to well construction details to verify the correct well identification (shallow or deep) and calculate water volumes in the well casing.

3.2 Low-Flow Purging

A low-flow, minimal drawdown technique was used for groundwater purging and sampling. This technique is described below and in the SAP. Low-flow sampling minimizes disturbance to the aquifer and is designed to ensure that samples collected from the wells are representative of groundwater. The low pumping rate induces laminar flow in the immediate vicinity of the sampling pump intake, thus drawing groundwater directly from the aquifer, horizontally through the well screen, and into the sampling device.

Purging and sampling were performed with a Grundfos Redi-Flo 1.75-inch-diameter, stainless steel, electric submersible impeller pump, suspended in the well with a stainless steel safety cable. A polyethylene discharge hose dedicated to the specific monitoring well was attached to the pump and extended to the ground surface for sample collection. Each monitoring well was purged immediately before sample collection so that the sample represented fresh formation water rather than stagnant water that had accumulated in the well casing. Well purging equipment was positioned so that any potential volatile organic sources, such as vehicles, gasoline-driven generators, and fuel tanks, were downwind of the well. This reduced the potential for contamination caused by entrainment of volatile air contaminants in the sample.

The pump intake was positioned at a level adjacent to or slightly above the midpoint of the saturated screened interval. Care was taken to gently insert the pump to minimize disturbance of any sediment that may have accumulated in the monitoring well. Purging was accomplished by pumping groundwater from the monitoring well at a rate of approximately 0.2 to 0.3 liter per minute. Groundwater was purged into a 5-gallon pail and a Hanna Model HI 991300 water quality meter was used to measure specific

conductance, temperature, pH, and total dissolved solids during purging. Purged water was emptied into 55-gallon drums with sealable lids located at each monitoring well site.

Water quality measurements made during purging were recorded in a field notebook at intervals ranging from 1 to 5 minutes. When readings stabilized over three consecutive measurements, purging was stopped and groundwater samples were collected. Stabilization was considered reached when three consecutive readings were within ± 0.2 for pH, $\pm 1^\circ$ C for temperature, and ± 10 percent for specific conductance.

3.3 Sample Collection

Groundwater samples were collected after water quality parameters stabilized during purging. Samples that did not require filtering were collected into the sample container directly from the end of the dedicated discharge hose. Groundwater samples requiring preservatives were collected in sample bottles supplied by the contract laboratory and contained the appropriate amounts of preservative solution. Sample container types, preservation techniques, and holding times for the chemical analyses are presented in Table 3.

Samples collected for dissolved metals analysis were field-filtered. An in-line, nitrocellulose, 0.45-micron cartridge filter was attached to the sample discharge line. Groundwater was rinsed through the filter for approximately 1 minute prior to filling the sample bottle. The sample bottle was then filled directly from the discharge outlet on the filter. Sample containers for VOCs and TPH were filled completely to the top of the container and the container cap screwed on to prevent any air remaining in the headspace of the container.

3.4 Decontamination Procedures

The objective of decontamination is to prevent cross-contamination of samples and wells by sampling equipment. Sampling equipment includes all devices that are used to collect or contain a sample prior to placement into a laboratory-provided sample container. Before initial use, sampling equipment that may contribute to the contamination of a sample must be thoroughly decontaminated, unless specific documentation exists to show that the sampling equipment has already been decontaminated. Pre-cleaned equipment and sample jars in factory-sealed containers do not require decontamination.

3.4.1 Sampling Equipment

Non-dedicated sampling equipment (water level meter) was decontaminated between sample locations by rinsing with organic-free deionized water. Decontaminated equipment was placed in clean pails to prevent recontamination. Decontamination wash water was placed in 55-gallon drums for later disposal in accordance with the SAP.

Water quality parameter meter sensors were thoroughly rinsed with deionized water. These sensors do not typically contact sample water or enter wells; therefore, decontamination is primarily for protecting the meter and for obtaining accurate measurements.

3.4.2 Pump and Discharge Hose

The sampling submersible pump was decontaminated as follows: 1) The pump and discharge hose/power cable assembly was placed into a 4-inch PVC tube that is 3 feet long and capped at the bottom. The tube was filled with a solution of potable water and liquinox (phosphate-free detergent). The pump was then activated for a sufficient time to allow approximately two gallons of soapy water to pass through the

entire discharge hose. 2) The pump intake was then placed into a second PVC tube. Approximately two gallons of deionized water was added to the PVC tube and pumped through the discharge hose. 3) The pump was stopped and removed from the PVC tube, and the water in the tube discarded into the 55-gallon drums. The pump body was then placed into a plastic bag and inserted into the holder on the pump reel until used at the next well.

A separate piece of new pump discharge polyethylene tubing was dedicated to each well. After use and decontamination procedures, the dedicated piece of tubing was stored in a clean, labeled plastic bag. The tubing was preserved in this manner throughout all of the groundwater monitoring rounds.

Prior to sampling groundwater during the 1st quarter 2007 event, the sampling pump was cleaned with a 5% nitric acid solution, and thoroughly rinsed with deionized water. The internal lubrication water in the Grundfos pump was also drained and replaced prior to obtaining samples.

3.5 Investigation-Derived Waste

Investigation-derived waste (IDW) generated during well purging and sampling includes groundwater and decontamination rinse water which has the potential to be contaminated with low levels of COPC. The purge water and decontamination rinse water IDW was examined for odors and visual evidence of contamination and placed in 55-gallon drums on site pending laboratory results of groundwater samples. Solid IDW (filters, plastic, and paper) was disposed in trash bins on site.

3.6 Sample Numbering, Handling, and Documentation

Each sample collected was assigned a unique sample identification number, referenced to the monitoring well location. As an example, 14LC-MW01SW represents a sample taken during the fourteenth quarterly sampling event (14) performed by PBS (samples collected in March 2007) from monitoring well LC-MW01S at Lacamas Creek, which was a groundwater sample (W). The QC field duplicate sample and field/rinsate blank sample were identified with fictitious location numbers related to the primary sample number, and recorded in the field logbook. No indication that a sample is a duplicate was provided on the sample label or chain-of-custody form. The samples to be used for matrix spike/matrix spike duplicate (MS/MSD) were specified in the comments section of the chain-of-custody. Field notes pertaining to sample collection were recorded in a permanently bound field logbook with waterproof paper.

Groundwater samples were collected in the appropriate sample containers and placed in the shipping cooler immediately upon sample collection. Each bottle was individually wrapped with bubble wrap. Sample jars were packaged with additional bubble wrap and styrofoam materials to minimize shifting of samples and prevent breakage of samples during shipment. Ice packaged in plastic ziplock storage bags was placed in each cooler to maintain the temperature in the shipping containers at 4° C +/- 2° C. Along with samples and ice, a temperature blank provided by the laboratory was placed in each cooler. A chain-of-custody form was filled out for each cooler shipped, placed in a ziplock bag, and placed on top of the sample bottles inside the cooler. Field sampling personnel affixed two signed and dated custody seals to each cooler. The samples collected each day were shipped by Federal Express (FedEx) from Portland, Oregon, to Laucks Testing Laboratories in Seattle, Washington, by overnight delivery service.

Sample labels on the sample containers included the following information:

- PBS project number
- Sample identification number
- Date and time of sampling
- Initials of sampling personnel

- Analyses to be performed
- Type of preservative added

3.7 Quality Assurance/Quality Control Samples

Duplicate samples were collected at a frequency of 1 per 10 monitoring well samples. Matrix spike/matrix spike duplicate (MS/MSD) samples were collected at a frequency of 1 per 20 monitoring well samples. Trip blanks were submitted with shipments containing groundwater samples for VOC analyses. One field blank/rinsate sample was collected during sampling of the groundwater monitoring wells. The field blanks/rinsate sample was collected by pumping deionized water through the sampling equipment and collecting the water in prepared containers.

4.0 ANALYTICAL METHODS

Field measurements were obtained for pH, specific conductance, temperature, and total dissolved solids in groundwater samples using a Hanna Model HI 991300 water quality meter. Water color and turbidity were noted visually. Analytical data were obtained by Laucks Testing Laboratories using standard, documented procedures to provide defensible data on contaminant characterization and contamination levels relative to appropriate regulatory and risk-based criteria. Specific laboratory analysis methods are presented in Table 2.

The specific analytical methodologies, along with the associated project-specified method detection limits (MDL), are presented in the QAPP. The MDLs are based on minimum detection levels that can be expected to be achieved reliably by the project analytical laboratories using the methodologies specified. As discussed in the QAPP, some of the analytical methodologies cannot achieve risk-based or cleanup goals for all analytes. Therefore, the analytical methodologies were selected to attain detection or quantitation limits that approach or achieve the risk-based goals for chemicals most likely to be present, with a secondary emphasis on approaching or achieving these goals for the maximum number of other possible contaminants. Analytical results falling between the method detection limit and the project-specified reporting limit have been reported and flagged as estimated values (J-flagged) on laboratory analysis data tables (Appendix A) and the laboratory report sheets (Appendix B).

5.0 DATA MANAGEMENT AND REVIEW

The laboratory data quality was evaluated before use according to the procedures described in the QAPP. The analytical results for total priority pollutant metals, SVOCs, TPH-Gx (gasoline), TPH-Dx (diesel), explosive compounds (including HMX, RDX, NG, and PETN), picric acid, perchlorate, TOC, DOC, TSS, alkalinity, and inorganic ions are presented in Table 4. Analytical results for dissolved metals from field filtered groundwater samples are presented in Table 5. Specific VOCs and SVOCs detected above the laboratory MDLs are presented in Table 6.

The analytical tables include the State of Washington MTCA levels for comparison with regulatory and risk-based criteria. MTCA Method A cleanup level values for groundwater were obtained from the MTCA Cleanup Regulation, Chapter 173-340 of the Washington Administrative Code (WAC) (WDOE, 2001). These cleanup levels are not site specific and are applicable to sites undergoing routine cleanup actions as defined in MTCA. MTCA Method B risk-based concentrations for groundwater were obtained from the MTCA Method B levels presented in the Volume 1, Multi-Sites Investigation Report for Camp Bonneville (Shannon & Wilson, 1999). The MTCA Method B values are based on a Risk Calculations (CLARC) II database (based on a 10^{-6} cancer risk or a hazard quotient of 1) (WDOE 1996; WDOE 2001) and are derived from formula values obtained from the February 1996 CLARC II Update (WDOE, 1996).

6.0 GROUNDWATER MONITORING RESULTS

6.1 Base Boundary at Lacamas Creek

Groundwater samples were collected from the 4 monitoring well pairs located at the Base Boundary at Lacamas Creek (Figure 3) on March 21 and 22, 2007. Paired shallow (S) and deep (D) monitoring wells consisted of sample numbers: 14LCMW01SW and 14LCMW01DW; 14LCMW02SW and 14LCMW02DW; 14LCMW03SW and 14LCMW03DW; and 14LCMW04SW and 14LCMW04DW. A field duplicate sample (labeled 14LCMW405W) was collected from monitoring well LC-MW01D on March 21, 2007. A MS/MSD field duplicate sample (labeled 14LCMW04DWMS/MSD) was collected from monitoring well LC-MW04D on March 22, 2007.

Water level depths in the wells ranged from 4.43 to 5.64 feet below the top of the PVC well casings. These represent water elevations in the wells ranging from 287.36 to 285.18 feet above mean sea level.

All samples were analyzed for TPH-Gx (gasoline), TPH-Dx (diesel), VOCs, SVOCs, explosive compounds (including HMX, RDX, NG, and PETN), picric acid, perchlorate, priority pollutant metals (total and dissolved), TOC, DOC, TSS, alkalinity, and inorganic ions. The laboratory analytical results are presented in Tables 4, 5, and 6. Groundwater field parameters (pH, temperature, conductivity, visual turbidity, and color) recorded at the time of sampling are presented in Table 7.

Groundwater from the Base Boundary monitoring wells had no detection of VOCs. Groundwater from three monitoring wells had detectable SVOCs: 14LCMW03SW, bis (2-Ethylhexyl) phthalate at 1.2 µg/L, estimated; 14LCMW04DW, bis (2-Ethylhexyl) phthalate at 1.7 µg/L, estimated; and 14LCMW04SW, bis (2-Ethylhexyl) phthalate at 0.96 µg/L, estimated.

No diesel, oil, or gasoline range petroleum hydrocarbons were detected in any of the Base Boundary groundwater samples. Explosive compounds, picric acid, and perchlorate were not detected in any of the groundwater samples.

TOC and DOC concentrations were below laboratory detection limit of 1.0 mg/L in all monitoring well groundwater samples. TSS found above the laboratory detection limit of 2 mg/L in seven of the eight monitoring wells ranged from 4 to 34 mg/L. Alkalinity in the groundwater samples ranged from 38 to 52 mg/L. Inorganic ions consisting of chloride (1.4 to 2.2 mg/L), sulfate (1.5 mg/L), and nitrate (0.22 to 0.86 mg/L) were detected slightly above laboratory MDLs in the monitoring wells.

Antimony, arsenic, beryllium, cadmium, chromium, copper, lead, mercury, nickel, selenium, and zinc all were detected in one or more of the unfiltered (total metals) groundwater samples from the Lacamas Creek – Base Boundary monitoring wells (Table 4). Antimony, arsenic, chromium, copper, mercury, nickel, and zinc all were detected in one or more of the filtered (dissolved metals) groundwater samples from the Lacamas Creek – Base Boundary monitoring wells (Table 5). No total or dissolved metals were detected at concentrations above MTCA Method A regulatory screening levels in samples from the Base Boundary monitoring wells.

Laboratory analysis results for duplicate sample 14LCMW405W were consistent with the concentrations in the original sample 14LCMW01DW. Laboratory analysis results for MS/MSD duplicate sample 14LCMW04DWMS/MSD were consistent with the concentrations in the original sample 14LCMW04DW. Differences in the sample results are discussed in Section 8.1.2 of this report.

6.2 Landfill 4 / Demolition Area 1

Groundwater samples were collected from monitoring wells at Landfill 4 / Demolition Area 1 (Figure 4) on March 19 and 20, 2007. Sample shallow (A) and deep (B) well pair numbers consisted of: 14L4MW01AW and 14L4MW01BW; 14L4MW02AW and 14L4MW02BW; 14L4MW03AW and 14L4MW03BW. Samples from individual monitoring wells consisted of sample numbers: 14L4MW04AW, 14L4MW05AW, 14L4MW07BW, 14L4MW17W, and 14L4MW18W. A field duplicate sample (labeled 14L4MW410W) was collected from monitoring well L4-MW05A on March 19, 2007.

Water level depths in the wells around the perimeter of the landfill ranged from 12.12 to 31.37 feet below the top of the PVC well casings. These represent water elevations in the wells ranging from 517.48 to 487.13 feet above mean sea level. The water level in the monitoring well located downstream of the landfill (L4-MW07B) was 38.87 feet below the top of the PVC well casing; equaling elevation 441.93 feet above mean sea level. Monitoring wells along North Fork Lacamas Creek at the base of the stream ravine, downstream of Landfill 4, had water levels below top of PVC casing of 10.49 feet in L4-MW17 and 11.20 feet in L4-MW18; equaling 350.99 feet and 351.64 feet above mean sea level, respectively.

All samples were analyzed for VOCs, explosive compounds (including HMX, RDX, NG, and PETN), and perchlorate. The laboratory analytical results are presented in Tables 4, 5, and 6. Groundwater field parameters (pH, temperature, conductivity, visual turbidity, and color) recorded at the time of sampling are presented in Table 7.

PETN and NG were not detected in any of the groundwater samples from shallow or deep monitoring wells. No explosive compounds (HMX and RDX) were detected in monitoring wells L4-MW01A, L4-MW01B, L4-MW07B, L4-MW17, and L4-MW18. HMX was detected in paired monitoring wells L4-MW02A (2.9 µg/L) and L4-MW02B (3.7 µg/L); other wells did not have detectable HMX. RDX was detected in monitoring wells L4-MW02A (19 µg/L), L4-MW02B (99 µg/L, estimated), L4-MW03A (13 µg/L), L4-MW03B (5.1 µg/L), L4-MW04A (1.9 µg/L), and L4-MW05A (3.5 µg/L); other wells did not have detectable RDX.

Perchlorate was detected in groundwater samples from monitoring wells L4-MW01A (3.8 µg/L), L4-MW02A (150 µg/L), L4-MW02B (520 µg/L), L4-MW03A (100 µg/L), L4-MW03B (48 µg/L), L4-MW04A (24 µg/L), L4-MW05A (36 µg/L) and L4-MW07B (20 µg/L). No perchlorate was found above the laboratory detection limit of 1 µg/L in groundwater from monitoring wells L4-MW01B, L4-MW17, and L4-MW18. The highest levels of HMX, RDX, and perchlorate were found in the groundwater sample from the paired monitoring well L4-MW02B.

Groundwater from two of the monitoring wells contained detectable VOCs: L4-MW02B contained 1,1-Dichloroethane (30 µg/L), 1,1-Dichloroethene (17 µg/L), Dichlorodifluoromethane (97 µg/L), Tetrachloroethene (0.70 µg/L, estimated), and 1,1,1-Trichloroethane (60 µg/L); L4-MW05A contained Tetrachloroethene (0.48 µg/L, estimated). No detected VOCs exceeded the MTCA Method A regulatory screening levels.

Total and dissolved metals were not analyzed for groundwater samples from the Landfill 4 / Demolition Area 1 monitoring wells during the 1st quarter 2007.

Laboratory analysis results for duplicate sample 14L4MW410W were consistent with the concentrations in the original sample 14L4MW05AW. Differences in the sample results are discussed in Section 8.1.2 of this report.

7.0 RECENT TRENDS IN WATER QUALITY DATA

The laboratory results for the groundwater parameters were compared for the four previous quarterly sampling events and the 1st Quarter 2007 event. These sampling quarters covered sampling periods of March 2006, June 2006, September 2006, December 2006, and March 2007, and encompass the range of seasonal climatic (rainfall and temperature) and groundwater level conditions at the monitoring well sites. Groundwater parameter data which show significant (at least one order of magnitude) difference over these sampling events are listed below.

Metals; Lacamas Creek/Boundary (metals are not included in the Landfill 4/Demolition Area 1 sampling)

- All of the metal concentrations have been relatively stable during the last five quarters of sampling with the following exceptions.
 - Chromium (total) has slightly increased in both total and dissolved metals samples,
 - Nickel has slightly increased in both total and dissolved metals samples, and
 - Zinc concentrations have decreased in both total and dissolved metals samples.
- Fluctuations of copper, nickel and zinc concentrations were observed in about half of the total metals samples (LCMW01SW, LCMW01DW, LC-MW-02D, LC-MW-04SW, and LC-MW-04DW).

Petroleum Hydrocarbons

- Diesel range petroleum hydrocarbons were detected in the Lacamas Creek monitoring well LCMW02DW at 0.14 mg/L in January 2006, but have not been detected during subsequent sampling events.

Perchlorate

- Perchlorate decreased in Landfill 4/DemoArea 1 wells L4MW01A and slightly decreased in well L4MW03A, L4MW03B, L4MW04A L4MW05A, .
- Perchlorate increased in Landfill 4/Demolition Area 1 well L4MW02B and slightly increased in well L4MW07B.
- Perchlorate concentrations are relatively consistent with the exception of wells L4MW01A and L4MW02B which display a pattern of significant variation.

8.0 DATA QUALITY OBJECTIVES

The overall data quality objective is to provide data of known and sufficient quality to evaluate the physical extent and concentration ranges of chemicals of potential concern from analysis of groundwater samples, and to assure compliance with environmental and health-related agencies. Data quality objectives for laboratory analysis are presented in the QAPP. Laboratory analytical data were evaluated with respect to quality assurance objectives for precision, accuracy, representativeness, comparability, and completeness parameters. The project specifications were met for all of these analytes, indicating that the sampling and analysis procedures were reproducible. The laboratory report narratives (Laucks Testing Laboratories data set CAB29) state that all quality control parameters that affect sample analysis were met.

8.1 Field Data Quality Assessment

There are no specific data quality objectives for the measurement of field parameters, such as temperature, pH, conductivity, and turbidity. Specific conductance, temperature, total dissolved solids,

and pH were measured during purging. Turbidity and water color were visually observed. Stabilization for groundwater sampling was reached when three successive readings were within ± 0.2 for pH, $\pm 1^\circ$ C for temperature, and ± 10 percent for specific conductance.

The criteria for field parameter measurements described in the SAP were met. Field parameter readings for groundwater samples collected from March 19 - 22, 2007 were measured using a calibrated Hanna Model HI 991300 water quality meter, which also allowed measurement of total dissolved solid (TDS).

8.1.2 Quality Control Sample Assessment

A field rinsate blank water sample (labeled 14LCMW400W) was collected on March 22, 2007. The rinsate sample consisted of deionized water run through the decontaminated pump and the discharge tubing for monitoring well LCMW18. The rinsate sample was analyzed for the full suite of analytes described in this report.

The deionized water field rinsate sample collected on March 22, 2007 (sample 14LCMW400W) had no laboratory detections of VOCs. The SVOC, bis (2-Ethylhexyl) phthalate, was detected at 1.3 $\mu\text{g/L}$ (estimated). Bis (2-Ethylhexyl) phthalate was also detected in the laboratory method blank samples run during laboratory QA/QC procedures. The unfiltered deionized water field rinsate sample contained detectable low levels of chromium (0.494 $\mu\text{g/L}$, estimated), nickel (0.262 $\mu\text{g/L}$, estimated), and zinc (1.93 $\mu\text{g/L}$, estimated). The filtered deionized water field rinsate sample contained detectable low levels of chromium (0.456 $\mu\text{g/L}$, estimated), nickel (0.421 $\mu\text{g/L}$, estimated), and mercury (0.072 $\mu\text{g/L}$). The field rinsate sample results for the 1st Quarter 2007 are similar to those obtained for the 4th Quarter 2006. The detection of several metals in the deionized water field rinsate sample appears to indicate the presence of low levels of metals in either the tubing used during this sample collection or in the deionized water source. During a future sampling event, deionized water will be collected directly from the supply source without passing it through the pump and hose equipment. This test will evaluate the levels of metals in the deionized water source.

The trip blanks (TB-1, TB-2 and TB-3) that were packed with the samples during the 1st Quarter 2007 sampling event had no laboratory detections of VOCs. Future sampling events will continue to consolidate VOC samples into a cooler and inclusion of a trip blank for each VOC shipment to the laboratory.

One duplicate sample was collected from each of the study areas. The duplicate samples were analyzed for the same constituents as the source sample. Relative percent differences (RPD) were calculated for each duplicate and source sample where both results were detected above laboratory detection levels. Laboratory results for the duplicate sample 14LCMW405W (Lacamas Creek Base Boundary area) were mutually detected with the source sample 14LCMW01DW for total and dissolved metals and alkalinity. The resultant RPD values are presented on Tables 4 and 5. The total metals RPD values ranged from 5% to 60% for 4 analytes. Only one result (mercury) exceeded the generally accepted RPD goal of 50%. The dissolved metals RPD values ranged from 10% to 44% for 3 analytes. No values for dissolved metals exceeded the 50% RPD goal. The alkalinity RPD was 4%.

Duplicate sample 14L4MW410W (Landfill 4/Demolition Area 1) and the source sample, 14L4MW05AW, had mutually detected values for RDX, perchlorate and 1 VOC (tetrachloroethene). The RDX and perchlorate RPDs are 11% and 6%, respectively (Table 4). The tetrachloroethene RPD value is 9% (Table 6). The RPD values for these samples meet the RPD goal of 50%.

8.2 Laboratory Analysis Chemical Data Quality

The analytical data quality evaluations performed by Laucks Testing Laboratories are presented in Appendix B with the analysis summary reports for the specific tests. Case narratives describing sample receipt, identification, and general comments by laboratory personnel are included in Appendix B preceding the copies of the chain-of-custody forms.

No sample analytical laboratory results were rejected. The case narratives and analysis summary reports indicate that most analytical results are acceptable for use without qualification. Some individual sample results were qualified as estimated values that were low-level detections below the laboratory instrument practical quantification limits (PQL), and flagged with “J” on the laboratory summary reports.

MS/MSD duplicate analyses were performed on sample 14LCMW04DW. All recoveries and relative percentage differences were within the acceptance levels.

All samples were received within the holding times for transport from the collection site to the laboratory. Exceptions to the collection and analysis criteria are listed below and noted in the laboratory case narrative documentation in Appendix B.

- Air bubbles of less than ¼-inch were present in several of the vials for VOCs for these samples upon receipt at the laboratory: 14L4MW17W, 14L4MW07B, 14L4MW02AW, 14LWMW01BW, 14LCMW01SW, 14LCMW02SW, Trip Blank (3/21/07), and 14LCMW400W. These conditions did not affect analyses.
- Three of the 1 liter amber bottles shipped on March 19, 2007 were broken on arrival at the lab. Insufficient sample volume was available to perform analyses for explosives. Additional groundwater was sampled from the monitor wells (L4MW17 and L4MW18) on March 22, 2007, and sent to the laboratory for analysis.
- SVOC surrogate recovery values fell outside of the laboratory control limits. Samples were re-extracted 8 days after the holding time had expired and were reanalyzed. Both the initial run and the reanalysis results are presented in the laboratory report package.
- Bis (2-Ethylhexyl) phthalate was detected in analysis of the laboratory method blank. Detection of this chemical in groundwater sample analysis results appears to be a result of its presence in laboratory equipment, not in the groundwater sample.

Corrective Measure: Additional bubble-wrap packing will be used to enclose glass sample containers.

8.3 Deviations to Standard Procedures

During the groundwater sampling event for the 1st Quarter 2007, deviations from the standard procedures of the SAP included the following.

- The total depth of the monitoring well was not measured. The total depths of the casings measured during previous quarterly monitoring events were used to determine water volumes in the well casing.
- During purging with the pump in the well casing, the water levels in the well were not continuously monitored.

Corrective Measure: Replacement procedures have been submitted to WDOE for approval as part of the revised SAP.

SAMPLE RECEIPT, IDENTIFICATION, AND GENERAL COMMENTS:

Sample Receipt and Identification:

The samples submitted under the laboratory number(s) indicated above were identified and analyzed as tabulated below. The samples were collected and received on the dates noted on the enclosed chain-of-custody copies, Attachment A.

Analytical Request Key:

VOA =	Volatile Organics by Method 8260B
ABN =	Semi-Volatiles by Method 8270D
ORD =	Ordnance by Method 8330
	PETN/Nitroglycerin by Method 8332
PIC =	Picric Acid by Modified 8330
TPHD =	Total Petroleum Hydrocarbons-Diesel by NWTPH
TPHG =	Total Petroleum Hydrocarbons-Gasoline by NWTPH
MET =	Priority Pollutant Metals by Methods 6020/7470A
ALK =	Alkalinity, Carbonate and Bicarbonate by Method 310.1M
ANIONS =	Chloride, Nitrate, Nitrite, Sulfate by Method 300.0
TOC =	Total Organic Carbon by Method 415.1M
DOC =	Dissolved Organic Carbon by Method 415.1M
TSS =	Total Suspended Solids by Method 160.2
PERC =	Ammonium Perchlorate by Method 314.0

TOC:

Singleton analysis was performed for this project as approved by the client. This modification is less expensive and meets project DQOs but does not meet NELAC guidelines.

LAUCKS TESTING LABORATORIES

940 S. Harney
Seattle, WA 98108

Sample Receipt Comments:

One of two 1-L amber glass bottles was received broken for 14MW017W. Two of two 1-L amber glass bottles were received broken for 14MW018W. Re-samples were received 3/23/07.

The temperature blank for the samples received 3/21/07 measured below the control limits of 4°C ± 2°C.

Only one VOA vial was found in the cooler for the 3/21/07 trip blank sample, though two vials were documented on the COC.

Several sample VOA vials contained air bubbles less than ¼ inch in size. See cooler receipt forms for specific documentation.

GENERAL REMARKS ON ORGANIC ANALYSES:

The following comments describe general analysis conditions. For remarks specific to the samples reported in this case, see "SPECIFIC REMARKS ON ORGANIC ANALYSIS."

Manual Integrations:

One or more analytes may have been manually integrated on the data system quantitation reports. All manual integrations have been flagged, initialed, and dated by the analyst. A list of the manual integration flags is detailed below.

M	Manual integration due to irregular peak shape
MS	Manual integration due to split peak
MR	Manual integration due to retention time shift
MI	Manual integration of correct isomer
MT	Manual integration due to peak tailing
MB	Manual integration due to irregular baseline

Holding Time Compliance:

Volatile Organic Compounds:

The holding time is 14 days calculated from date of collection in both soil and water samples. All samples were analyzed within holding time.

Semi-Volatile Organic Compounds:

The holding time to extraction is 7 days in water and 14 days in soil calculated from the date of collection. In either case, the holding time from extraction to analysis is 40 days. All samples were initially analyzed within holding times. Re-extraction and reanalysis was performed outside the holding time. See detailed comments below.

Ordnance, PETN/Nitroglycerin, Picric Acid

The holding time to extraction is 7 days in water and 14 days in soil calculated from the date of collection. The holding time from extraction to analysis is 40 days. All samples were extracted and analyzed within holding times.

LAUCKS TESTING LABORATORIES

940 S. Harney
Seattle, WA 98108

NWTPH Gasoline Fraction:

The holding time for analysis is 14 days in water and soil calculated from date of collection. All samples were analyzed within holding time.

TPH Diesel Fraction:

The holding time to extraction, which is calculated from the date of collection, is 7 days for water samples and 14 days for soil samples. In either case, the holding time from extraction to analysis is 40 days. All samples were extracted and analyzed within holding time.

Volatile Fraction (8260):

Initial Calibration Standards:

Analysis of the initial calibration yielded %RSD values for several analytes that exceeded 15%. Alternative curve fits were applied to all analytes except dibromochloromethane and 1,2-dibromo-3-chloropropane because the average response factor model was more appropriate for these compounds as indicated on the GC/MS Initial Calibration Exceptions Reports. (Located with the initial calibration summary.)

Continuing Calibration Verification (CCV):

Results for all SPCC and CCC compounds were within the control limits. In the CCV performed on 03/26/2007 the percent difference values for dibromochloromethane exceeded 20% due to decreased response. Because sample results are reported well below the reporting limit (RL) the chance of reporting any false negatives for those compounds that recovered low at the RL was negligible.

In the CCV performed on 03/27/07 the %D value for carbon disulfide exceeded 20% due to increased response. This analyte was not detected in any associated samples.

Semivolatiles Fraction:

Continuing Calibration Verification (CCV):

Analysis of the CCV performed on 03/30/07 yielded % D values for benzoic acid, 2,4-dinitrophenol, 4,6-dinitro-3-methylphenol, carbazole and di-n-octylphthalate that exceeded 20% due to increased response. Reported results for benzoic acid may be biased high in the associated samples.

Analysis of the CCV performed on 04/10/07 yielded % difference values for several analytes that exceeded 20% due to increased response. These compounds were not detected in any associated sample extracts. In addition, analysis of this CCV also yielded %D values for hexachlorocyclopentadiene, benzidine and 2,4,6-tribromophenol due to decreased response. Because sample results were reported well below the reporting limit (RL) the chance of reporting any false negatives for these compounds at the RL is negligible.

Analysis of the CCV performed on 04/19/07 yielded % difference values for butylbenzylphthalate, bis(2-ethylhexyl)phthalate and di-n-octylphthalate that exceeded 20% due to increased response. These compounds may be biased high in the associated sample extracts. In addition, analysis of this CCV also yielded %D values for hexachlorocyclopentadiene, n-nitroso-di-n-propylamine and 2-nitroaniline due to decreased response. Because sample results were reported well below the reporting limit (RL) the chance of reporting any false negatives for these compounds at the RL is negligible.

LAUCKS TESTING LABORATORIES

940 S. Harney
Seattle, WA 98108

Surrogate Recoveries:

Analysis of the method blank B032607MSVWLS resulted in out of control surrogate recovery values for 2-fluorophenol and 2,4,6-tribromophenol. In addition, analyses of several sample extracts yielded one or more surrogate recoveries that fell outside of the control limits. Corrective action in the form of re-extraction for all samples except 14LCMW04DW (insufficient sample volume) was performed on 04/05/07, 8 days after the holding time expired. Both sets of data have been submitted.

Method Blank Analysis:

Analysis of the method blank B032607MSVWLS resulted in the detection of bis(2-ethylhexyl)phthalate at a concentration that was less than one-half of the reporting limit. Reported results for this compound have been B flagged to denote its presence in the associated method blank analysis.

Quality Control Analyses:

MS/MSD analyses performed on sample 14LCMW04DW resulted in low recoveries for several target analytes. Results for these compounds may be biased low in the associated samples.

Analysis of the blank spike S032607MSVWLS yielded slightly low recoveries for isophorone, 2,4,6-trichlorophenol and benzo(a)pyrene.

Analysis of the blank spike S040507MSVWLS yielded high recoveries for hexachlorocyclopentadiene, butylbenzylphthalate and bis(2-ethylhexyl)phthalate. Because these recoveries are within the marginal exceedance limits, no further action was required.

Ordinance Fraction:

All quality control parameters were met.

PETN/Nitroglycerin Fraction:

All quality control parameters were met.

Picric Acid Fraction:

Surrogate Recovery:

Analysis of sample extract 14LCMW04DW did not recover the surrogate. Normally, corrective action in the form of sample re-extraction would be performed, however, due to insufficient sample available (the only remaining bottle was acid-preserved) no further action could be taken.

Continuing Calibration Verification (CCV) Analyses:

In the analysis of CCV F3310721 the %D for the surrogate 4,6-dinitro-o-cresol was greater than 20% due to an increase in response. Because all other surrogate recoveries were in control no further action was taken.

NWTPH Gasoline Fraction:

NWTPHG was used to quantitate the samples for gasoline. Gasoline range responses were determined by summing the responses of all components, resolved and unresolved, between toluene and naphthalene. Quantitation is based on average calibration factor.

LAUCKS TESTING LABORATORIES

940 S. Harney
Seattle, WA 98108

Quality Control Analyses:

MS/Duplicate analyses were performed on sample 14LCMW04DW. All spike recoveries and relative percent differences were within the established limits.

All quality control parameters were met.

NWTPH Diesel Fraction:

NWTPHD was used to quantitate the samples for diesel and oil. Diesel range responses were determined by summing the responses of all components, resolved and unresolved, between C₁₂ and C₂₄ integrated to a horizontal baseline. Oil range responses were determined by summing the responses of all components, resolved and unresolved, between C₂₄ and C₄₀ integrated to a horizontal baseline. Quantitation was based on a linear regression.

Quality Control Analyses:

MS/Duplicate analyses were performed on sample 14LCMW04DW. All spike recoveries and relative percent differences were within the established limits.

All quality control parameters were met.

GENERAL REMARKS ON INORGANIC ANALYSES:

The following comments describe general analysis conditions. For remarks specific to the samples reported in this case, see "SPECIFIC REMARKS ON INORGANIC ANALYSES."

ICP Metals:

On the first timed and dated page of each ICP-MS run, the data to be reported or rejected will be tabulated for that run.

Mercury:

For Liquids:

Laucks purchases a 1000 mg/L Hg stock solution from Inorganic Ventures. The 0.5 mg/L working standard is made by diluting 100 µL to 200 mL with 0.15% HNO₃. The calibration curve is made by placing 0, 20, 50, 100, 200, 500 and 1000 µL of the working standard digestion vessels and diluting up to 50 mL. The standard curve is equivalent to 0, 0.2, 0.5, 1.0, 2.0, 5.0 and 10.0 µg/L.

SPECIFIC REMARKS ON INORGANIC ANALYSES:

Holding Time Compliance:

Laucks calculates holding time compliance for inorganic determinations using the date on which reportable data were acquired.

LAUCKS TESTING LABORATORIES

940 S. Harney
Seattle, WA 98108

Metals:

The holding time for metals is six months from the date of collection, excepting mercury, which is 28 days. All analyses were performed within holding time.

Miscellaneous:

The following analytes do not have a Contract Laboratory Program holding time. The holding times tabulated below derive from the relevant EPA methods and are applicable when the sample was appropriately preserved and/or cooled. All samples submitted followed the preservation guidelines unless explicitly noted otherwise.

<u>Analyte</u>	<u>Holding Time</u>	<u>Violations</u>
Alkalinity	14 days	None
Chloride	28 days	None
Nitrate	48 hours	None
Nitrite	48 hours	None
Sulfate	28 days	None
Total Organic Carbon	28 days	None
Dissolved Organic Carbon	28 days	None
Total Suspended Solids	7 days	None
Perchlorate	28 days	None

ICP Metals:

The scandium internal standard percent recovery for all samples except for samples 14LCMW04SW-F, 14LCMW400W, and 14LCMW400W-F, fell outside of the suggested control limits of 30-120%.

Beryllium and chromium are associated with this internal standard. Therefore, results for beryllium and chromium for all samples except for samples 14LCMW04SW-F, 14LCMW400W, and 14LCMW400W-F, were reported from a 5 fold dilution where the scandium internal standard is within the control limits.

For the run sequence R016788, several CCVs exceeded the upper control limit for beryllium. For the samples associated with these CCVs, only those samples containing concentrations of beryllium that were less than the CRDL have been reported. Quality control data for beryllium were reported and were within control limits. No corrective action was required. Data have not been flagged for these events.

For the run sequence R016788, antimony was present in the ICB at a level greater than 1/2 the CRDL. For this analytical run, all reported samples contained concentrations of antimony that were less than the CRDL, therefore no further corrective action was required. Quality control data were reported and were within control limits. Data have not been flagged for these events.

The serial dilution for the element lead did not agree within 10% of the original determination after correction for dilution for sample 14LCMW04DW. No further corrective action was required. All relevant data have been flagged with an "E" on the applicable Forms I and IX.

LAUCKS TESTING LABORATORIES

940 S. Harney
Seattle, WA 98108

Mercury:

No comments.

Miscellaneous Inorganics:

For run sequence R016060, the first continuing calibration verification recovery was outside the established control limits for the chloride analysis. No samples were reported for chloride from this run. Therefore, no further action was taken.

For run sequence R016118, the initial calibration verification recovery was outside the established control limits for the chloride and sulfate analysis. No samples were reported for chloride and sulfate from this run. Therefore, no further action was taken.

For run sequence R016118, the initial calibration verification recovery was outside the established control limits for the nitrite analysis. All reported samples were less than the reporting limit. Therefore, no further action was taken.

For run sequence R016118, the matrix spike and matrix spike duplicate recoveries were outside the established control limits for the chloride, nitrate and sulfate analysis. The continuing calibration verifications are all within control limits. Therefore, no further action was taken.

For run sequence R016118, the matrix spike recovery was outside the established control limits for the nitrate analysis. As a result the relative percent difference recovery was outside control limits. All continuing calibration verifications are within control limits. Therefore, no further action was taken.

For run sequence R016135, the initial calibration verification recovery was outside the established control limits for the nitrite analysis. No samples were reported for nitrite from this run. Therefore, no further action was taken.

For run sequence R016135, the matrix spike and/or matrix spike duplicate recoveries were outside the established control limits for the nitrite and chloride analyses. As a result the relative percent difference was outside established control limits for nitrite. All other quality control elements are within control limits. Therefore, no further action was taken.

LAUCKS TESTING LABORATORIES

ABBREVIATIONS

Several abbreviations can appear in our reports. The most commonly employed abbreviations are as follows:

- U The analyte of interest was not detected to the limit of detection indicated.
- SDL Sample Detection Limit. The SDL can vary from sample to sample, depending on sample size, matrix interferences, moisture content and other sample-specific conditions.
- PQL Practical Quantitation Limit. The limit is drawn from the test method and usually represents the SDL multiplied by a matrix-specific factor.
- DB Dry Basis. The value reported has been back-calculated to normalize for the moisture content of the sample.
- AR As-Received. The value has not been normalized for moisture.

ORGANIC ANALYSES:

- B When used in relation to organics fractions, the "B" flag indicates that the analyte of interest was detected in the method blank associated with the sample, as well as in the sample itself. The "B" flag is applied without regard to the relative concentrations detected in the blank and sample.
 - J The analyte of interest was detected below the routine reporting limit. This value should be regarded as an estimate.
 - T The flagged values represent the SUM of two co-eluting compounds. The SUM of these two values is shown as though it were a result for each of them. The two figures should not be added together.
 - E The flagged value was reported from an analysis that exceeded the linear range of the instrument. See additional comments for further discussion of the circumstances. Values so flagged should be considered estimates.
 - P When a dual column GC technique is employed, this flag indicates that test results from the two columns differ by more than 25%. Generally, we report the higher value.
 - C The flagged analyte has been confirmed by GC/MS analysis. The value reported may be derived from either the initial or confirmatory (GC/MS) analysis. See specific report comments for details.
- CRQL Client requested Quantitation Limit, usually the limit of detection specified at your request. Might also be referred to as Contract Required Quantitation Limit.

LAUCKS TESTING LABORATORIES

940 S. Harney
Seattle, WA 98108

INORGANIC ANALYSES:

- J The reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL). If the analyte was analyzed for but not detected, a "U" shall be entered.
- E The reported value is estimated because of the presence of interference. The serial dilution was not within control limits.
- N Spiked sample recovery not within control limits.
- * Duplicate analysis not within control limits.

CRDL Client Requested Detection Limit, usually the limit of detection specified at your request. Might also be referred to as Contract Required Detection Limit.

RELEASE OF DATA

Laucks certifies that these results meet all requirements of the NELAC standards, except where otherwise noted.

"I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature."

Respectfully submitted,

Mike Baxter
Project Manager

30 April 07
(DATE)

Harry Romberg
Quality Assurance Officer

4/30/07
(DATE)

HOW TO CONTACT US:

All Laucks Testing Laboratories staff members can be reached at the same telephone and facsimile numbers: (206) 767-5060 by phone, (206) 767-5063 by FAX.

REQUESTS FOR DUPLICATE COPIES:

This packet has been checked for accuracy. All pages are present and in sequential order. Please see Attachment B for a detailed record.

In the event that duplicate data copies are needed, Laucks will accommodate your request at a fee of twenty-five cents (\$0.25) per copy, plus shipping. If the data are in storage, there will also be a fee for retrieval.

FINAL REPORT COPY

Cooler Receipt Form
Laucks Testing Laboratories, Inc.

SDG: CAB29 Taken By: CLIENT

Cooler: AAD404 Transferred: FED EX

COC #: 42792

Project: Camp Bonneville (PBS Engineering and Environmental)

Date samples were received at the laboratory: 3/20/2007

Date cooler was opened: 3/20/2007 8:45AM

A. PRELIMINARY EXAMINATION PHASE:

1. Did cooler come with a shipping slip (airbill, etc.)? YES
if YES, record carrier name and airbill number: 859915438911
2. Were custody seals unbroken and intact at the date and time of arrival? INTACT
Date On Custody Seal: Custody Seals Description: ONE IN FRONT
3. Were custody papers sealed in a plastic bag and taped inside to the lid? YES
4. Did you screen samples for radioactivity using the Geiger Counter? YES
5. Were custody papers filled out properly (ink, signed, etc.)? YES
6. Did you sign custody papers in the appropriate place? YES
7. If required, was enough cooling material present? YES
8. Have designated person initial here to acknowledge receipt of cooler: SM

B. LOG-IN PHASE:

Date samples were logged-in: 3/20/2007 8:50AM

Logged-in by Susan Moss (sign) Susan Moss

9. Describe type of packing in cooler:

BUBBLE WRAP

10. Were all bottles sealed in separate plastic bags? NO
11. Were labels in good condition? YES
12. Were all bottle labels complete (ID,date,time signature,preservative,etc.)? YES
13. Did all bottle labels agree with custody papers? YES
14. Were correct containers used for the tests indicated? YES
15. Were the correct pHs observed? YES
16. Was a sufficient amount of sample sent for tests indicated? YES
17. Were bubbles absent in VOA samples? YES
18. Temperatures: 4.3

DISCREPANCIES:

FINAL REPORT COPY

Cooler Receipt Form
Laucks Testing Laboratories, Inc.

SDG: CAB29 Taken By: CLIENT

Cooler: AAD384 Transferred: FEDEX

COC #: 42789

Project: Camp Bonneville (PBS Engineering and Environmental)

Date samples were received at the laboratory: 3/22/2007

Date cooler was opened: 3/22/2007 8:45AM

A. PRELIMINARY EXAMINATION PHASE:

1. Did cooler come with a shipping slip (airbill, etc.)? YES
if YES, record carrier name and airbill number: 859915437411
2. Were custody seals unbroken and intact at the date and time of arrival? INTACT
Date On Custody Seal: Custody Seals Description: ONE IN FRONT AND BACK
3. Were custody papers sealed in a plastic bag and taped inside to the lid? YES
4. Did you screen samples for radioactivity using the Geiger Counter? YES
5. Were custody papers filled out properly (ink, signed, etc.)? YES
6. Did you sign custody papers in the appropriate place? YES
7. If required, was enough cooling material present? YES
8. Have designated person initial here to acknowledge receipt of cooler: SM

B. LOG-IN PHASE:

Date samples were logged-in: 3/22/2007 8:50AM

Logged-in by Stephen Hadley (sign) SH

9. Describe type of packing in cooler:

BUBBLE WRAP

10. Were all bottles sealed in separate plastic bags? YES
11. Were labels in good condition? YES
12. Were all bottle labels complete (ID,date,time signature,preservative,etc.)? YES
13. Did all bottle labels agree with custody papers? YES
14. Were correct containers used for the tests indicated? YES
15. Were the correct pHs observed? YES
16. Was a sufficient amount of sample sent for tests indicated? YES
17. Were bubbles absent in VOA samples? YES
18. Temperatures: 4.2

DISCREPANCIES:

Several VOA vials were received with bubbles < 1/4". See supplemental receipt for specific documentation.

1 OF 2 Trip Blanks was not found in the cooler.

Laucks Testing Laboratories, Inc.

SDG: CAB29 Taken By: CLIENT

Cooler: AAK729 Transferred: FEDEX

COC #: 42784

Project: Camp Bonneville (PBS Engineering and Environmental)

Date samples were received at the laboratory: 3/22/2007

Date cooler was opened: 3/22/2007 8:45AM

A. PRELIMINARY EXAMINATION PHASE:

1. Did cooler come with a shipping slip (airbill, etc.)? YES
if YES, record carrier name and airbill number: 859915437411
2. Were custody seals unbroken and intact at the date and time of arrival? INTACT
Date On Custody Seal: Custody Seals Description: ONE IN FRONT AND BACK
3. Were custody papers sealed in a plastic bag and taped inside to the lid? YES
4. Did you screen samples for radioactivity using the Geiger Counter? YES
5. Were custody papers filled out properly (ink, signed, etc.)? YES
6. Did you sign custody papers in the appropriate place? YES
7. If required, was enough cooling material present? YES
8. Have designated person initial here to acknowledge receipt of cooler: SH

B. LOG-IN PHASE:

Date samples were logged-in: 3/22/2007 8:50AM

Logged-in by Stephen Hadley (sign) S. Hadley

9. Describe type of packing in cooler:

BUBBLE WRAP

10. Were all bottles sealed in separate plastic bags? YES
11. Were labels in good condition? YES
12. Were all bottle labels complete (ID, date, time signature, preservative, etc.)? YES
13. Did all bottle labels agree with custody papers? YES
14. Were correct containers used for the tests indicated? YES
15. Were the correct pHs observed? YES
16. Was a sufficient amount of sample sent for tests indicated? YES
17. Were bubbles absent in VOA samples? YES
18. Temperatures: 4.5

FINAL REPORT COPY

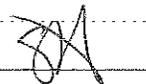

**Cooler Receipt Form
Laucks Testing Laboratories, Inc.**

SDG: CAB29
Cooler: AAK999
COC #: 42781
Project: Camp Bonneville (PBS Engineering and Environmental)

Taken By: CLIENT
Transferred: FEDEX

Date samples were received at the laboratory: 3/22/2007
Date cooler was opened: 3/22/2007 8:45AM

A. PRELIMINARY EXAMINATION PHASE:

1. Did cooler come with a shipping slip (airbill, etc.)?
- if YES, record carrier name and airbill number: 859945437411 YES
2. Were custody seals unbroken and intact at the date and time of arrival?
- Date On Custody Seal: Custody Seals Description: **ONE IN FRONT AND BACK** INTACT
3. Were custody papers sealed in a plastic bag and taped inside to the lid?
4. Did you screen samples for radioactivity using the Geiger Counter?
5. Were custody papers filled out properly (ink, signed, etc.)?
6. Did you sign custody papers in the appropriate place?
7. If required, was enough cooling material present?
8. Have designated person initial here to acknowledge receipt of cooler:  YES

B. LOG-IN PHASE:

Date samples were logged-in: 3/22/2007 8:50AM

Logged-in by Stephen Hadley (sign) 

9. Describe type of packing in cooler:
- BUBBLE WRAP**
10. Were all bottles sealed in separate plastic bags?
11. Were labels in good condition?
12. Were all bottle labels complete (ID,date,time signature,preservative,etc.)?
13. Did all bottle labels agree with custody papers?
14. Were correct containers used for the tests indicated?
15. Were the correct pHs observed?
16. Was a sufficient amount of sample sent for tests indicated?
17. Were bubbles absent in VOA samples?
18. Temperatures: 5.6

A. A standard turnaround time is assumed unless otherwise marked. B. The laboratory may not be responsible for missed holding time for samples received with less than 50% of the analytical hold time remaining. Please contact the laboratory for further information.

INSTRUCTIONS

- USE ONE LINE PER SAMPLE.
- BE SPECIFIC IN TEST REQUESTS.
- CHECK OFF TESTS TO BE PERFORMED FOR EACH SAMPLE.

Cooler Receipt Form
Laucks Testing Laboratories, Inc.

SDG: CAB29 Taken By: CLIENT

Cooler: AAD484 Transferred: FEDEX

COC #: 42279

Project: Camp Bonneville (PBS Engineering and Environmental)

Date samples were received at the laboratory: 3/23/2007

Date cooler was opened: 3/23/2007 8:30AM

A. PRELIMINARY EXAMINATION PHASE:

1. Did cooler come with a shipping slip (airbill, etc.)? YES
if YES, record carrier name and airbill number: 859915439631
2. Were custody seals unbroken and intact at the date and time of arrival? INTACT
Date On Custody Seal: Custody Seals Description: ONE IN FRONT AND BACK
3. Were custody papers sealed in a plastic bag and taped inside to the lid? YES
4. Did you screen samples for radioactivity using the Geiger Counter? YES
5. Were custody papers filled out properly (ink, signed, etc.)? YES
6. Did you sign custody papers in the appropriate place? YES
7. If required, was enough cooling material present? YES
8. Have designated person initial here to acknowledge receipt of cooler: SA

B. LOG-IN PHASE:

Date samples were logged-in: 3/23/2007 8:35AM

Logged-in by Stephen Hadley (sign) S. Hadley

9. Describe type of packing in cooler:

BUBBLE WRAP

10. Were all bottles sealed in separate plastic bags? YES
11. Were labels in good condition? YES
12. Were all bottle labels complete (ID, date, time signature, preservative, etc.)? YES
13. Did all bottle labels agree with custody papers? YES
14. Were correct containers used for the tests indicated? YES
15. Were the correct pHs observed? YES
16. Was a sufficient amount of sample sent for tests indicated? YES
17. Were bubbles absent in VOA samples? YES
18. Temperatures: 5.8

Average RSD :							3.9

Amount = Response divided by CF

CF - Calibration Factor (response divided by concentration).
 RSD - Relative Standard Deviation.

LOG OF BORING LC-MW-01D

CAMP BONNEVILLE, WA
38-EH-004M-03

Geologist : Mary Grez
 Start Date : 11/9/02
 End Date : 11/10/02
 Start Time : 1230
 Weather : Overcast, Showers, Some Sun

Drilling Company : Cascade Drilling Inc.
 Drillers : Todd Mecharn
 : Rowan Miller
 : David Gose

Depth in	Well: LC-MW-01D Elev.: 287.58	DESCRIPTION	REMARKS	BORING AND WELL CONSTRUCTION INFORMATION
0	CONCRETE	DARK YELLOWISH-BROWN SILTY CLAY WITH 50% GRAVEL-FINE TO MEDIUM SOME PULVERIZED	MOIST	Bore Hole Depth : 39'10" Bore Diameter : 7"
5		VERY DARK BROWN CLAYEY GRAVEL- 90% GRAVEL, SOME SILT POSSIBLE GRAVEL UP TO 1" SIZE, PULVERIZED	MOIST	WELL LOCATION: NORTH WELL LOCATION ALONG LACAMAS CREEK BOUNDARY.
10		GRAVEL HAS CHERT, MORE OF THE SOLID GRAY GRAVEL. PULVERIZED WITH OLIVE-BROWN SILT COATING	BECOMING DRIER AT 8' 40 BLOWS/FT 10'-12' VERY LOOSE ZONE 2 BLOWS/2FT MOIST, PROBABLE WATER TABLE AT 12'-14'	DRILLING METHOD: ROLLER CONE BIT ADVANCED THROUGH 7" CASING. WELL INNER DIAMETER: 2 INCH WELL SLOT SIZE: 0.010 INCH WELL SCREEN MATERIAL: PVC
15	GROUT RISER	DARK GRAY SILTY SANDY MEDIUM GRAVEL AND COBBLES-BACK TO OLIVE-BROWN AT 12'	CHECK FOR WATER AT 15'. POSSIBLE MOISTURE. 1st MATERIAL IS WET. DRILLING TO 35' AND LET SIT OVERNIGHT	OPEN TRIANGLE: DEPTH TO WATER BEFORE DEVELOPING. CLOSED TRIANGLE: DEPTH WATER ENCOUNTERED.
20				HEIGHT OF CASING ABOVE GROUND 2.67'
25			VERY WET 4-6 BLOWS/FT	MONUMENT NO. AHA-358
30	SAND 20-40	CLEAN PULVERIZED GRAVEL MOSTLY CHERT	MOIST TO WET 14 BLOWS/FT	USED FORMATION WATER TO HYDRATE BENTONITE.
35	SAND 10-20	FINE SANDY SILTY GRAYISH BROWN GRAVEL	STOP AT 35' LET SIT OVER NIGHT 11/10/02 0730	ONE CENTRALIZER PLACED ABOVE WELL SCREEN.
38	SCREEN	CLEAN GRAY GRAVEL WITH SOME SILT AND VERY FINE SAND	WATER AT 5' BGS. 0800 START BLOW 10 GAL. OF WATER OUT. STOP HERE TO AVOID GETTING EQUIPMENT PLUGGED SO WE DON'T HAVE TO INJECT WATER.	ALL WELLS COMPLETED WITH STEEL SURFACE MONUMENT SET 2' DEEP INTO CONCRETE WITH A CONCRETE PAD AND THREE PROTECTIVE BALLARDS PAINTED YELLOW.
40		38' LIGHT OLIVE YELLOW SILT, VERY SLIGHT CLAY. POSSIBLE CONFINING ZONE OR TOP OF BEDROCK.		
		BOTTOM OF HOLE 39.83'		

LOG OF BORING LC-MW-02S

COLUMN DESCRIPTIONS

- 1 Elevation:** Elevation (in feet) with respect to mean sea level or assumed datum.
- 2 Depth:** Vertical distance (in feet) below ground surface.
- 3 Sample Type:** Type of soil sample collected at depth interval depicted; symbols explained above.
- 4 Sample Number:** Sample identification number.
- 5 Blows per 6 inches:** Number of blows required to advance driven sampler each 6-inch drive interval.
- 6 Percent Recovery:** Percentage of sample recovered for given sample interval; blank if not recorded.
- 7 Graphic Log:** Graphic depiction of subsurface material encountered.
- 8 Material Description:** Description of subsurface material encountered, including USCS soil designation.
- 9 Well Completion Log:** Graphic depiction of well subsurface material.
- 10 PID (ppm):** Photoionization detector readings in parts per million (ppm) of standard gas.
- 11 Headspace PID readings:** PID readings taken of enclosed portion of soil sample at recorded depth.
- 12 Remarks:** Comments or observations pertinent to drilling/sampling.

GENERAL NOTES

- Soil classifications are based on the Unified Soil Classification System (USCS) and include consistency/relative density (where standard blow count correlation is possible), moisture, and color. Field descriptions may have been modified to reflect results of laboratory tests.
- Descriptions on these boring logs apply only at the specific boring locations and at the time the borings were advanced. They are not warranted to be representative of subsurface conditions at other locations or times.

Notes: * = depth in feet measured from top of well PVC casing.
 ** = water level in feet above mean sea level, relative to top of casing elevation survey (see elevations, Table 8)
 - = parameter not measured in field
Water level in monitoring well LC-MW05D was at the top of the rim of steel casing when opened on 12/2/2004.
Field parameters of temperature, conductivity, and pH measured with a Hanna Model HI 991300 meter.

TABLE 4. CONSTITUENTS DETECTED IN GROUNDWATER SAMPLES - 2nd QUARTER 2005
SUMMARY OF GROUNDWATER LABORATORY ANALYSIS
CAMP BONNEVILLE, VANCOUVER, WASHINGTON

Table with columns: Sample No., Sample Date, Sample Location, Total Metals (µg/L) [Antimony, Arsenic, Beryllium, Cadmium, Chromium (total), Copper, Lead, Nickel, Selenium, Silver, Thallium, Zinc, Mercury], VOCs (µg/L), SVOCs (µg/L), Petroleum Hydrocarbons (mg/L) [NTPH-Dx, Oil Range, NTPH-Gx], Ordnance Explosives Compounds (µg/L) [HMX, RDX], NG (µg/L), PETN (µg/L), Picric Acid (µg/L), Perchlorate (µg/L), TOC (mg/L), DOC (mg/L), TSS (mg/L), Alkalinity (HCO3) (mg/L), Ions (results above detection limits shown)

Notes:

Only detected analytes are shown; see laboratory reports for complete listing of compounds tested
nt - Sample not tested
µg/L - micrograms per liter
mg/L - milligrams per liter
ND - Not detected to the limit of laboratory detection indicated
n/a - Not applicable. MTCA Method A Cleanup Level not provided.
Detect - VOC compound detected; see separate VOC table
WA MTCA Method B Levels from "Multi-Sites Investigation Report", Shannon & Wilson, 1999.
BOLD print indicates concentration exceeding WA MTCA Method A Cleanup Level

07L4MW03BW	6/29/2005	1135	26.64	484.83	12.0	29	14	7.05	clear	
07L4MW04AW	6/29/2005	1320	27.45	484.34	13.3	12	6	7.07	clear	
07L4MW05AW	6/29/2005	1150	23.80	486.11	11.8	22	10	7.07	slightly cloudy	
07L4MW07BW	6/28/2005	1410	39.55	440.87	10.9	28	14	7.08	clear	pH meter malfunction
07L4MW17W	6/29/2005	1000	10.37	351.11	14.0	300	153	7.34	cloudy	purged dry; slow recharge
07L4MW18W	6/29/2005	1040	10.45	352.39	12.0	135	69	6.99	cloudy	

Notes:

- * = depth in feet measured from top of well PVC casing.
- ** = water level in feet above mean sea level, relative to top of casing elevation survey (see elevations, Table 8)
- = parameter not measured in field
- Water level in monitoring well LC-MW05D was at the top of the rim of steel casing when opened on 12/2/2004.
- Field parameters of temperature, conductivity, and pH measured with a Hanna Model HI 991300 meter.

Note:
 Only analytes detected in at least one sample are shown; see lab reports for complete listing of compounds tested.
 nt - Sample not tested
 ND - Not detected to the limit of laboratory detection indicated
 µg/L - micrograms per liter
 J = value estimated
 B = also detected in the method blank associated with the sample
 n/a - Not applicable. MTCA Method A Cleanup Level not provided.
 Methylene chloride and acetone are common laboratory solvents and may indicate laboratory contamination.

Lab detection limit			5.0	5.0	1.0	1.0	1.0	1.0	1.0	1.0	1.0	5.0	1.0	4.7
Method A Cleanup Levels (µg/L)			n/a	n/a	5	n/a	n/a	n/a	n/a	200	n/a	5	n/a	n/a

Note:

Only analytes detected in at least one sample are shown; see lab reports for complete listing of compounds tested.

nt - Sample not tested

ND - Not detected to the limit of laboratory detection indicated

µg/L - micrograms per liter

J = value estimated

B = also detected in the method blank associated with the sample

n/a - Not applicable. MTCA Method A Cleanup Level not provided.

RPD = relative percent difference between sample versus duplicate

Acetone is a common laboratory solvent and may indicate laboratory contamination.
