## LAUCKS TESTING LABORATORIES

940 S. Harney  
Seattle, WA 98108

Picric/Picramic\*:

We are accredited by NELAP for the attenuation compounds through our SOP LTL-8303 rev. 10 by EPA 8330.

TOC:

Singleton analysis was performed for this project as approved by the client. This modification is less expensive and meets project DQOs but does not meet NELAC guidelines.

### Sample Receipt Comments:

The following discrepancies were noted in association with the receipt of these samples.

For sample #4 (16LCMW01DW) one of the 40mL OTWS, clear glass (preserved w/H3PO4) for TOC analysis was received broken. One of three volatiles bottles submitted for 16LCMW435W contained bubbles of less than 1/4 inch in size.

### **GENERAL REMARKS ON ORGANIC ANALYSES:**

The following comments describe general analysis conditions. For remarks specific to the samples reported in this case, see "SPECIFIC REMARKS ON ORGANIC ANALYSIS."

#### Manual Integrations:

One or more analytes may have been manually integrated on the data system quantitation reports. All manual integrations have been flagged, initialed, and dated by the analyst. A list of the manual integration flags is detailed below.

|    |  |
|----|--|
| M  | Manual integration due to irregular peak shape |
| MS | Manual integration due to split peak           |
| MR | Manual integration due to retention time shift |
| MI | Manual integration of correct isomer           |
| MT | Manual integration due to peak tailing         |
| MB | Manual integration due to irregular baseline   |

### Holding Time Compliance:

#### *Volatile Organic Compounds:*

The holding time is 14 days calculated from date of collection in both soil and water samples. All samples were analyzed within holding time.

#### *Semi-Volatile Organic Compounds:*

The holding time to extraction is 7 days in water and 14 days in soil calculated from the date of collection. In either case, the holding time from extraction to analysis is 40 days. All samples were extracted and analyzed within holding time.

| MR | Manual integration due to retention time shift |
| MI | Manual integration of correct isomer           |
| MT | Manual integration due to peak tailing         |
| MB | Manual integration due to irregular baseline   |

### Holding Time Compliance:

#### *Volatile Organic Compounds:*

The holding time is 14 days calculated from date of collection in both soil and water samples. All samples were analyzed within holding time.

#### *Semi-Volatile Organic Compounds:*

The holding time to extraction is 7 days in water and 14 days in soil calculated from the date of collection. In either case, the holding time from extraction to analysis is 40 days. All samples were extracted and analyzed within holding time.

## LAUCKS TESTING LABORATORIES

940 S. Harney  
Seattle, WA 98108

### *Ordnance, PETN/Nitroglycerin, Picric Acid*

The holding time to extraction is 7 days in water and 14 days in soil calculated from date of collection. The holding time from extraction to analysis is 40 days. All samples were extracted and analyzed within holding time.

### *TPH Gasoline Fraction:*

The holding time for analysis is 14 days in water and soil calculated from the date of collection. All samples were analyzed within holding times.

### *TPH Diesel Fraction:*

The holding time to extraction, which is calculated from the date of collection, is 7 days for water samples and 14 days for soil samples. In either case, the holding time from extraction to analysis is 40 days. All samples were extracted and analyzed within holding time.

### **Volatile Fraction (8260):**

#### **Quality Control Analyses:**

MS/MSD analyses were not performed due to insufficient sample volume. All spiking analytes in the blank spike analysis recovered within control limits.

#### **Semivolatiles Fraction:**

##### **Second Source Calibration Verification (ICV):**

Analysis of the ICV performed on 10/23/2007 yielded a %D value for 2,4-dinitrophenol that exceeded 25% due to increased response. 2,4-dinitrophenol was not detected in associated samples, no action was taken. In addition, analysis of this ICV also yielded a %D value for benzidine that exceeded 25% due to decreased response. Benzidine is subject to oxidative losses and poor chromatographic behavior. However, because sample results are reported well below the reporting limit (RL) the chance of reporting any false negatives for benzidine at the RL is negligible.

##### **Continuing Calibration Verification (CCV):**

Analysis of the CCV performed on 10/25/07 yielded %D values for 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol and indeno(1,2,3-cd)pyrene that exceeded 20% due to increased response. These analytes were not detected in the associated samples.

##### **Surrogate Recoveries:**

Analyses of sample extracts 16LCMW01SW and 16LCMW02SW yielded low surrogate recoveries for 2-fluorophenol. They recovered at 18 percent (16LCMW02SW) and 17 percent (16LCMW01SW) and the lower control limit is 20 percent. Because all other surrogate recoveries were in control, no further action was taken.

### **Ordnance Fraction:**

All quality control parameters were met.

### **PETN/Nitroglycerin Fraction:**

All quality control parameters were met.

## LAUCKS TESTING LABORATORIES

940 S. Harney  
Seattle, WA 98108

### Picric Acid Fraction:

#### Continuing Calibration Verification (CCV) Analyses:

Analysis of the CCV F9250710.D yielded a %D value for picric acid that exceeded the control limit due to increased response. Picric acid was not present in any of the associated samples. No further action was taken.

### NWTPH Gasoline Fraction:

NWTPHG was used to quantitate the samples for gasoline. Gasoline range responses were determined by summing the responses of all components, resolved and unresolved, between toluene and naphthalene. Quantitation was based on the average calibration factor.

All other quality control parameters were met.

### NWTPH Diesel Fraction:

NWTPH-Dx was used to quantitate the samples for diesel and oil. Diesel range responses were determined by summing the responses of all components, resolved and unresolved, between C<sub>12</sub> and C<sub>24</sub> integrated to a horizontal baseline. Oil range responses were determined by summing the responses of all components, resolved and unresolved, between C<sub>24</sub> and C<sub>40</sub> integrated to a horizontal baseline. Quantitation was based on a linear regression.

All quality control parameters were met.

### **GENERAL REMARKS ON INORGANIC ANALYSES:**

The following comments describe general analysis conditions. For remarks specific to the samples reported in this case, see "SPECIFIC REMARKS ON INORGANIC ANALYSES."

#### ICP-MS Metals:

On the first timed and dated page of each ICP-MS run, the data to be reported or rejected will be tabulated for that run.

#### Mercury:

For Liquids:

Laucks purchases a 1000 mg/L Hg stock solution from Inorganic Ventures. The 0.5 mg/L working standard is made by diluting 100  $\mu$ L to 200 mL with 0.15% HNO<sub>3</sub>. The calibration curve is made by placing 0, 20, 50, 100, 200, 500 and 1000  $\mu$ L of the working standard digestion vessels and diluting up to 50 mL. The standard curve is equivalent to 0, 0.2, 0.5, 1.0, 2.0, 5.0 and 10.0  $\mu$ g/L.

### SPECIFIC REMARKS ON INORGANIC ANALYSES:

#### Holding Time Compliance:

Laucks calculates holding time compliance for inorganic determinations using the date on which reportable data were acquired.

#### Metals:

The holding time for metals is six months from the date of collection, excepting mercury, which is 28 days. All analyses were performed within holding time.

#### Miscellaneous:

The following analytes do not have a Contract Laboratory Program holding time. The holding times tabulated below derive from the relevant EPA methods and are applicable when the sample was appropriately preserved and/or cooled. All samples submitted followed the preservation guidelines unless explicitly noted otherwise.

| <u>Analyte</u>           | <u>Holding Time</u> | <u>Violations</u> |
|--------------------------|---------------------|-------------------|
| Alkalinity               | 14 days             | None              |
| Chloride                 | 28 days             | None              |
| Nitrate                  | 48 hours            | None              |
| Nitrite                  | 48 hours            | None              |
| Sulfate                  | 28 days             | None              |
| Total Organic Carbon     | 28 days             | None              |
| Dissolved Organic Carbon | 28 days             | None              |
| Total Suspended Solids   | 7 days              | None              |
| Perchlorate              | 28 days             | None              |
| pH                       | 24 hours            | None              |

#### ICP-MS Metals:

The scandium internal standard percent recoveries for samples 16LCMW435F and 16LCMW02DWF fell outside of the suggested control limits of 30-120%. Beryllium and chromium are associated with this internal standard. Since the scandium recoveries for samples 16LCMW435F and 16LCMW02DWF were within 120% of the following CCV scandium recovery, no corrective action was required. Beryllium and chromium results for samples 16LCMW435F and 16LCMW02DWF were reported as is. Data have not been flagged for these events.

The scandium internal standard percent recoveries for all samples, except for samples 16LCMW435F and 16LCMW02DWF, fell outside of the suggested control limits of 30-120%. Beryllium and chromium are associated with this internal standard. Therefore, results for beryllium and chromium for all samples, except for samples 16LCMW435F and 16LCMW02DWF, were reported from a five fold dilution where the scandium internal standard is within the control limits.

For the run sequence R021858, CCV4 and CCV5 exceeded the upper control limit for beryllium and thallium. All samples contained levels of beryllium and thallium that were less than the CRDL. Quality

## LAUCKS TESTING LABORATORIES

940 S. Harney  
Seattle, WA 98108

control data for beryllium and thallium were reported and were within control limits. No corrective action was required. Data have not been flagged for these events.

For the run sequence R021858, CCV5 exceeded the upper control limit for lead. All samples contained levels of lead that were less than the CRDL. Quality control data for lead were reported and were within control limits. No corrective action was required. Data have not been flagged for this event.

Copper was present in the batch preparation blank at a level greater than ½ the CRDL. All associated samples contained concentrations of copper that were less than the CRDL, therefore no further corrective action was required. Data have not been flagged for this event.

For the run sequence R021858, copper, lead, and zinc were present in the ICSA at concentrations greater than the CRDL. All associated samples contained concentrations of copper, lead, and zinc that were less than the CRDL, therefore no corrective action was required. Data have not been flagged for this event.

### **Mercury:**

No comments.

### **Miscellaneous Inorganics:**

No comments.

## LAUCKS TESTING LABORATORIES

### ABBREVIATIONS

Several abbreviations can appear in our reports. The most commonly employed abbreviations are as follows:

- U The analyte of interest was not detected to the limit of detection indicated.
- SDL Sample Detection Limit. The SDL can vary from sample to sample, depending on sample size, matrix interferences, moisture content and other sample-specific conditions.
- PQL Practical Quantitation Limit. The limit is drawn from the test method and usually represents the SDL multiplied by a matrix-specific factor.
- DB Dry Basis. The value reported has been back-calculated to normalize for the moisture content of the sample.
- AR As-Received. The value has not been normalized for moisture.

### ORGANIC ANALYSES:

- B When used in relation to organics fractions, the "B" flag indicates that the analyte of interest was detected in the method blank associated with the sample, as well as in the sample itself. The "B" flag is applied without regard to the relative concentrations detected in the blank and sample.
  - J The analyte of interest was detected below the routine reporting limit. This value should be regarded as an estimate.
  - T The flagged values represent the SUM of two co-eluting compounds. The SUM of these two values is shown as though it were a result for each of them. The two figures should not be added together.
  - E The flagged value was reported from an analysis that exceeded the linear range of the instrument. See additional comments for further discussion of the circumstances. Values so flagged should be considered estimates.
  - P When a dual column GC technique is employed, this flag indicates that test results from the two columns differ by more than 25%. Generally, we report the higher value.
  - C The flagged analyte has been confirmed by GC/MS analysis. The value reported may be derived from either the initial or confirmatory (GC/MS) analysis. See specific report comments for details.
- CRQL Client requested Quantitation Limit, usually the limit of detection specified at your request. Might also be referred to as Contract Required Quantitation Limit.

**LAUCKS TESTING LABORATORIES**

940 S. Harney  
Seattle, WA 98108

INORGANIC ANALYSES:

- J The reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL). If the analyte was analyzed for but not detected, a "U" shall be entered.
  - E The reported value is estimated because of the presence of interference. The serial dilution was not within control limits.
  - N Spiked sample recovery not within control limits.
  - \* Duplicate analysis not within control limits.
- CRDL Client Requested Detection Limit, usually the limit of detection specified at your request. Might also be referred to as Contract Required Detection Limit.

RELEASE OF DATA

Laucks certifies that these results meet all requirements of the NELAC standards, except where otherwise noted.

"I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature."

Respectfully submitted,

  
Kara Godineaux  
Project Manager

*HOW TO CONTACT US:*

All Laucks Testing Laboratories staff members can be reached at the same telephone and facsimile numbers: (206) 767-5060 by phone, (206) 767-5063 by FAX.

*REQUESTS FOR DUPLICATE COPIES:*

This packet has been checked for accuracy. All pages are present and in sequential order. Please see Attachment B for a detailed record.

In the event that duplicate data copies are needed, Laucks will accommodate your request at a fee of twenty-five cents (\$0.25) per copy, plus shipping. If the data are in storage, there will also be a fee for retrieval.

A. A standard turnaround time is assumed unless otherwise marked.

B. The laboratory may not be responsible for missed holding time for samples received with less than 50% of the analytical hold time remaining. Please contact the laboratory for further information.

1. USE ONE LINE PER SAMPLE.
2. BE SPECIFIC IN TEST REQUESTS.
3. CHECK OFF TESTS TO BE PERFORMED FOR EACH SAMPLE.

**Cooler Receipt Form**  
**Laucks Testing Laboratories, Inc.**

SDG: CAB36  
Cooler: AAD414  
COC #: 43114  
Project: Camp Bonneville (PBS Engineering and Environmental)

Taken By: CLIENT  
Transferred: FED EX

Date samples were received at the laboratory: 9/18/2007  
Date cooler was opened: 9/18/2007 8:10AM

**A. PRELIMINARY EXAMINATION PHASE:**

1. Did cooler come with a shipping slip (airbill, etc.)? ..... YES  
if YES, record carrier name and airbill number: 862054469048
2. Were custody seals unbroken and intact at the date and time of arrival? ..... INTACT  
Date On Custody Seal: Custody Seals Description: ONE IN FRONT
3. Were custody papers sealed in a plastic bag and taped inside to the lid? ..... YES
4. Did you screen samples for radioactivity using the Geiger Counter? ..... NO
5. Were custody papers filled out properly (ink, signed, etc.)? ..... YES
6. Did you sign custody papers in the appropriate place? ..... YES
7. If required, was enough cooling material present? ..... YES
8. Have designated person initial here to acknowledge receipt of cooler: MC

**B. LOG-IN PHASE:**

Date samples were logged-in: 9/18/2007 8:20AM

Logged-in by David Duk-Su-Chang (sign) 

9. Describe type of packing in cooler:

ICE

10. Were all bottles sealed in separate plastic bags? ..... YES
11. Were labels in good condition? ..... YES
12. Were all bottle labels complete (ID,date,time signature,preservative,etc.)? ..... YES
13. Did all bottle labels agree with custody papers? ..... YES
14. Were correct containers used for the tests indicated? ..... YES
15. Were the correct pHs observed? ..... YES
16. Was a sufficient amount of sample sent for tests indicated? ..... YES
17. Were bubbles absent in VOA samples? ..... YES
18. Temperatures: 2.0

14. Were correct containers used for the tests indicated? ..... YES
15. Were the correct pHs observed? ..... YES
16. Was a sufficient amount of sample sent for tests indicated? ..... YES
17. Were bubbles absent in VOA samples? ..... NO
18. Temperatures: 4.8

DISCREPANCIES:

**Cooler Receipt Form  
Laucks Testing Laboratories, Inc.**

SDG: CAB36    Taken By: CLIENT  
Cooler: AAD651    Transferred: FED EX  
COC #: 43113

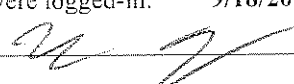

Project: Camp Bonneville (PBS Engineering and Environmental)

Date samples were received at the laboratory:                      9/18/2007  
Date cooler was opened:    9/18/2007 8:10AM

**A. PRELIMINARY EXAMINATION PHASE:**

1. Did cooler come with a shipping slip (airbill, etc.)? ..... YES  
if YES, record carrier name and airbill number: 795503536360
2. Were custody seals unbroken and intact at the date and time of arrival? ..... INTACT  
Date On Custody Seal:    Custody Seals Description: ONE IN FRONT
3. Were custody papers sealed in a plastic bag and taped inside to the lid? ..... YES
4. Did you screen samples for radioactivity using the Geiger Counter? ..... NO
5. Were custody papers filled out properly (ink, signed, etc.)? ..... YES
6. Did you sign custody papers in the appropriate place? ..... YES
7. If required, was enough cooling material present? ..... YES
8. Have designated person initial here to acknowledge receipt of cooler: DDC

**B. LOG-IN PHASE:**

Date samples were logged-in: 9/18/2007 8:20AM  
Logged-in by David Duk-Su-Chang (sign) 

9. Describe type of packing in cooler:  
ICE

10. Were all bottles sealed in separate plastic bags? ..... YES
11. Were labels in good condition? ..... YES
12. Were all bottle labels complete (ID,date,time signature,preservative,etc.)? ..... YES
13. Did all bottle labels agree with custody papers? ..... YES
14. Were correct containers used for the tests indicated? ..... YES
15. Were the correct pHs observed? ..... YES
16. Was a sufficient amount of sample sent for tests indicated? ..... YES
17. Were bubbles absent in VOA samples? ..... YES
18. Temperatures:                      2.6

Amount = Response divided by CF

CF - Calibration Factor ( response divided by concentration )  
RSD - Relative Standard Deviation.

Calibration Factor ( CF ) = Response divided by Concentration  
 Percent Difference ( %D ) = (Ave CF - ICV CF ) divided by Ave CF times 100  
 \* = Percent Difference is outside the acceptance limits of +/-15%  
 # = The compound retention time is the expected retention time in the method.

Calibration Factor ( CF ) = Response divided by Concentration

Percent Difference ( %D ) = (Ave CF - Cont CF) divided by AveCF times 100

\* = Percent Difference is outside the acceptance limits of +/-15%

# = The compound retention time is the expected retention time in the method.

| 2 3,4-Dinitrotoluene | 833.5840 | 891.7440 | 836.9660 | 887.3984 | 879.7140 | 855.8817 | 3.3  |
| Average RSD :        |          |          |          |          |          |          | 3.9  |

Amount = Response divided by CF

CF - Calibration Factor ( response divided by concentration )  
 RSD - Relative Standard Deviation.

GASOLINE METHOD BLANK SUMMARY

CLIENT SAMPLE NO.

B092607GVOWI1

Lab Name: Laucks Testing Labs Contract: N/A  
 Lab Sample ID: B092607GVOWI1 SDG No.: CAB36  
 Matrix: (SOIL/WATER) Water Date Prepared: 09/26/2007  
 Lab File ID (1): I9267-2N.b-I926704.d Lab File ID (2): \_\_\_\_\_  
 Date Analyzed (1): 09/26/2007 Date Analyzed (2): \_\_\_\_\_  
 Time Analyzed (1): 12:02 Time Analyzed (2): \_\_\_\_\_  
 Instrument ID (1): HP 5890I Instrument ID (2): \_\_\_\_\_  
 Column(1): DB-VRX 30m/0.45u ID: 0.45 (mm) Column(2): \_\_\_\_\_ ID: \_\_\_\_\_ (mm)

THIS METHOD BLANK APPLIES TO THE FOLLOWING SAMPLES AND QC SAMPLES:

| CLIENT SAMPLE NO. | LAB SAMPLE ID | COL | LAB FILE ID | DATE/TIME ANALYZED | RUN SEQUENCE |
|-------------------|---------------|-----|-------------|--------------------|--------------|
| I6LCMW02SW        | CAB36-005     | 1   | I926727.d   | 09/27/2007 02:58   | R022206      |
| S092607GVOWI1     | S092607GVOWI1 | 1   | I926705.d   | 09/26/2007 12:40   | R022206      |

Amount = Response divided by CF

+++ - Standard level not used in linearity determination.

CF - Calibration Factor ( Response divided by concentration ).

RSD - Relative Standard Deviation.

\* = RPD or percent recovery is outside established control limits

# = This RPD or percent recovery is not flagged as an exceedance because the Sample Found amount is five times or more than the Spike Added amount.

The concentration values on this report may have non-significant digits tabulated. These are the same values used to compute the recovery and/or RPD values listed and are available during data review to verify our calculations.

## LAUCKS TESTING LABORATORIES

940 S. Harney  
Seattle, WA 98108

### Picric/Picramic\*:

We are accredited by NELAP for the attenuation compounds through our SOP LTL-8303 rev. 10 by EPA 8330.

### TOC:

Singleton analysis was performed for this project as approved by the client. This modification is less expensive and meets project DQOs but does not meet NELAC guidelines.

### Sample Receipt Comments:

The following discrepancies were noted in association with the receipt of these samples.

The temperature blank for one cooler was measured at a temperature below the control limit of  $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ . One of two 40mL (H<sub>3</sub>PO<sub>4</sub>) preserved vials for TOC analysis for sample Sample #3 (16LCMW04DW ) was received broken. One of three volatiles bottles submitted for Sample #1 (trip blank) contained bubbles of less than 1/4 inch in size. The client was notified of these discrepancies via email.

### **GENERAL REMARKS ON ORGANIC ANALYSES:**

The following comments describe general analysis conditions. For remarks specific to the samples reported in this case, see "SPECIFIC REMARKS ON ORGANIC ANALYSIS."

### Manual Integrations:

One or more analytes may have been manually integrated on the data system quantitation reports. All manual integrations have been flagged, initialed, and dated by the analyst. A list of the manual integration flags is detailed below.

|    |  |
|----|--|
| M  | Manual integration due to irregular peak shape |
| MS | Manual integration due to split peak           |
| MR | Manual integration due to retention time shift |
| MI | Manual integration of correct isomer           |
| MT | Manual integration due to peak tailing         |
| MB | Manual integration due to irregular baseline   |

### Holding Time Compliance:

#### *Volatile Organic Compounds:*

The holding time is 14 days calculated from date of collection in both soil and water samples. All samples were analyzed within holding time.

#### *Semi-Volatile Organic Compounds:*

The holding time to extraction is 7 days in water and 14 days in soil calculated from the date of collection. In either case, the holding time from extraction to analysis is 40 days. Sample 16LCMW04SW was re-extracted outside of holding time (see detailed comments below). All other samples were extracted and analyzed within holding time .

## LAUCKS TESTING LABORATORIES

940 S. Harney  
Seattle, WA 98108

### *Ordnance, PETN/Nitroglycerin, Picric Acid*

The holding time to extraction is 7 days in water and 14 days in soil calculated from the date of collection. The holding time from extraction to analysis is 40 days. All samples were originally extracted within holding times, however, re-extraction for ordnance and picric/picramic acid were performed outside of holding times. See comments below. All samples were analyzed within holding time.

### *TPH Gasoline Fraction:*

The holding time for analysis is 14 days in water and soil calculated from date of collection. All samples were analyzed within holding time.

### *TPH Diesel Fraction:*

The holding time to extraction, which is calculated from the date of collection, is 7 days for water samples and 14 days for soil samples. In either case, the holding time from extraction to analysis is 40 days. All samples were extracted and analyzed within holding times.

### **Volatile Fraction (8260):**

#### Initial Calibration Verification:

In the ICV performed on 9/27/2007 1,1-dichloroethene exceeded 25% due to decreased response and carbon disulfide exceeded 25% due to increased response. Because these analytes recovered within 20% in the daily second source S100107MVOWM2, no further action was taken.

### **Semivolatiles Fraction:**

#### Second Source Calibration Verification (ICV):

Analysis of the ICV performed on 10/23/2007 yielded a %D value for 2,4-dinitrophenol that exceeded 25% due to increased response. This analyte was not detected in the associated samples, no action was taken. In addition, analysis of this ICV also yielded a %D value for benzidine that exceeded 25% due to decreased response. Benzidine is subject to oxidative losses during solvent concentration and poor chromatographic behavior. However, because sample results are reported well below the reporting limit (RL) the chance of reporting any false negatives for benzidine at the RL is negligible.

#### Continuing Calibration Verification (CCV):

Analysis of the CCV performed on 11/04/07 yielded %Ds for 4-nitrophenol and the surrogate nitrobenzene-d5 that exceeded 20% due to decrease in response. Reported results for the surrogate nitrobenzene-d5 may be biased low in the associated samples. In addition, because sample results are reported well below the reporting limit (RL) the chance of reporting any false negatives for 4-nitrophenol at the RL is negligible.

Analysis of the CCV performed on 11/05/07 yielded %Ds for bis(2-chloroisopropyl)ether and azobenzene that exceeded 20% due to decrease in response. In addition, this CCV also yielded %Ds for 2,4,5-trichlorophenol and 2,4-dinitrophenol that exceeded 20% due to increased response. Only the blank spike S103007MSVWLO was associated with this CCV; no action was taken.

#### Surrogate Recoveries:

Analysis of sample extract 16LCMW04SW yielded a low surrogate recovery for 2,4,6-tribromophenol. Corrective action in the form of re-extraction was performed for this sample on 10/30/07, 34 days

## LAUCKS TESTING LABORATORIES

940 S. Harney  
Seattle, WA 98108

outside of holding time. Analysis of the re-extracted sample yielded all surrogate recoveries in control. Both sets of data have been submitted.

### Quality Control Analyses:

MS/MSD analyses performed on sample extract 16LCMW04DW yielded low recoveries for hexachlorocyclopentadiene. MSD analysis also yielded low recoveries for 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol and a zero recovery for benzoic acid. In addition, RPD values for several analytes exceeded the control limits. Because all recoveries were in control in the associated blank spike; no further action was taken.

### Ordnance Fraction:

#### Blank Spike Analysis:

Analysis of the blank spike prepared on 09/26/2007 yielded low recoveries for HMX and RDX. The samples were re-extracted 5 days after the holding time expired. Analyses of the re-extracted samples yielded acceptable recovery results. Data from both analyses have been submitted.

### PETN/Nitroglycerin Fraction:

#### Surrogate Recoveries:

Analyses of sample extracts 16LCMW03SW, 16LCMW03DW, 16LCMW04SW and blank spike S092607HORWLG2 yielded surrogate recoveries that exceeded the upper limit. Because the recoveries were high and there were no target analytes detected in any associated samples, no further action was taken.

### Picric Acid Fraction:

#### Surrogate Recoveries:

Analysis of several extracts yielded surrogate recoveries that exceeded the upper control limit. All samples were reextracted and reanalyzed yielding all surrogate recoveries within the control limits.

#### Blank Spike Analysis:

Analysis of the blank spike prepared on 09/25/2007 yielded both analyte recoveries that were outside of the control limits. The surrogate recovery was also out of control. The samples were re-extracted 9 days after holding time had expired. Analyses of the re-extracted samples yielded acceptable recovery values. Data from both analyses have been submitted.

### Quality Control Analyses:

MS/MSD analyses were performed on sample 16LCMW04DW. The recoveries and RPD values for all analytes were outside of the control limits. The samples were re-extracted 9 days after holding time had expired. However, there was insufficient sample available for MS/MSD reanalyses.

### NWTPH Gasoline Fraction:

NWTPHG was used to quantitate the samples for gasoline. Gasoline range responses were determined by summing the responses of all components, resolved and unresolved, between toluene and naphthalene. Quantitation is based on average calibration factor.

## LAUCKS TESTING LABORATORIES

940 S. Harney  
Seattle, WA 98108

### Quality Control Analyses:

MS/MSD analyses were performed on sample 16LCMW04DW. All recoveries and relative percent differences were within the established limits.

All quality control parameters were met.

### NWTPH Diesel Fraction:

NWTPH-Dx was used to quantitate the samples for diesel and oil. Diesel range responses were determined by summing the responses of all components, resolved and unresolved, between C<sub>12</sub> and C<sub>24</sub> integrated to a horizontal baseline. Oil range responses were determined by summing the responses of all components, resolved and unresolved, between C<sub>24</sub> and C<sub>40</sub> integrated to a horizontal baseline. Quantitation was based on a linear regression.

All quality control parameters were met.

## GENERAL REMARKS ON INORGANIC ANALYSES:

The following comments describe general analysis conditions. For remarks specific to the samples reported in this case, see "SPECIFIC REMARKS ON INORGANIC ANALYSES."

### ICP Metals:

On the first timed and dated page of each ICP-MS run, the data to be reported or rejected will be tabulated for that run.

### Mercury:

Laucks purchases a 1000 mg/L Hg stock solution from Inorganic Ventures. The 1.0 mg/L working standard is made by diluting 25 µL to 50 mL with 0.15% HNO<sub>3</sub>. The calibration curve is made by placing 0, 20, 50, 100, 200, 500 and 1000 µL of the working standard into the appropriate digestion vessels and diluting up to 50 mL. The standard curve is equivalent to 0, 0.2, 0.5, 1.0, 2.0, 5.0 and 10.0 µg/L.

## SPECIFIC REMARKS ON INORGANIC ANALYSES:

### Holding Time Compliance:

Laucks calculates holding time compliance for inorganic determinations using the date on which reportable data were acquired.

### Metals:

The holding time for metals is six months from the date of collection, excepting mercury, which is 28 days. All analyses were performed within holding time.

## LAUCKS TESTING LABORATORIES

Seattle, WA 98108

### Miscellaneous:

The following analytes do not have a Contract Laboratory Program holding time. The holding times tabulated below derive from the relevant EPA methods and are applicable when the sample was appropriately preserved and/or cooled. All samples submitted followed the preservation guidelines unless explicitly noted otherwise.

| <u>Analyte</u>           | <u>Holding Time</u> | <u>Violations</u> |
|--------------------------|---------------------|-------------------|
| Alkalinity               | 14 days             | None              |
| Chloride                 | 28 days             | None              |
| Nitrate                  | 48 hours            | None              |
| Nitrite                  | 48 hours            | None              |
| Sulfate                  | 28 days             | None              |
| Total Organic Carbon     | 28 days             | None              |
| Dissolved Organic Carbon | 28 days             | None              |
| Total Suspended Solids   | 7 days              | None              |
| Perchlorate              | 28 days             | None              |
| pH                       | 24 hours            | None              |

### ICP-MS Metals:

The scandium internal standard percent recoveries for all samples fell outside of the suggested control limits of 30-120%. Beryllium and chromium are associated with this internal standard. Therefore, results for beryllium and chromium for all samples were reported from a 5-fold dilution where the scandium internal standard is within the control limits.

For the run sequence R022517, CCV7 exceeded the control limit for chromium. No sample results for chromium were associated with this CCV, therefore no corrective action was required. Data have not been flagged for this event.

For the run sequence R022517, antimony was present in CCB9 at a level greater than 1/2 the CRDL. No sample results for antimony were associated with this CCB, therefore no further corrective action was required. Data have not been flagged for this event.

Cadmium and chromium were present in the batch preparation blank at a level greater than 1/2 the CRDL. All associated samples contained concentrations of cadmium and chromium that were less than the CRDL, therefore no further corrective action was required. Data have not been flagged for this event.

The serial dilution for the element zinc did not agree within 10% of the original determination after correction for dilution for samples 16LCMW04DW and 16LCMW04DWF. No further corrective action was required. All relevant data have been flagged with an "E" on the applicable Forms 1 and 9.

### Mercury:

No comments.

**LAUCKS TESTING LABORATORIES**

940 S. Harney  
Seattle, WA 98108

**Miscellaneous Inorganics:**

For run sequence R022200, the relative percent difference for the matrix spike and matrix spike duplicate was outside the established control limits for the total organic carbon analysis. All other quality control elements were within control limits. Therefore, no further action was taken.

### ABBREVIATIONS

Several abbreviations can appear in our reports. The most commonly employed abbreviations are as follows:

- U The analyte of interest was not detected to the limit of detection indicated.
- SDL Sample Detection Limit. The SDL can vary from sample to sample, depending on sample size, matrix interferences, moisture content and other sample-specific conditions.
- PQL Practical Quantitation Limit. The limit is drawn from the test method and usually represents the SDL multiplied by a matrix-specific factor.
- DB Dry Basis. The value reported has been back-calculated to normalize for the moisture content of the sample.
- AR As-Received. The value has not been normalized for moisture.

### ORGANIC ANALYSES:

- B When used in relation to organics fractions, the "B" flag indicates that the analyte of interest was detected in the method blank associated with the sample, as well as in the sample itself. The "B" flag is applied without regard to the relative concentrations detected in the blank and sample.
  - J The analyte of interest was detected below the routine reporting limit. This value should be regarded as an estimate.
  - T The flagged values represent the SUM of two co-eluting compounds. The SUM of these two values is shown as though it were a result for each of them. The two figures should not be added together.
  - E The flagged value was reported from an analysis that exceeded the linear range of the instrument. See additional comments for further discussion of the circumstances. Values so flagged should be considered estimates.
  - P When a dual column GC technique is employed, this flag indicates that test results from the two columns differ by more than 25%. Generally, we report the higher value.
  - C The flagged analyte has been confirmed by GC/MS analysis. The value reported may be derived from either the initial or confirmatory (GC/MS) analysis. See specific report comments for details.
- CRQL Client requested Quantitation Limit, usually the limit of detection specified at your request. Might also be referred to as Contract Required Quantitation Limit.

## LAUCKS TESTING LABORATORIES

940 S. Harney  
Seattle, WA 98108

### INORGANIC ANALYSES:

- J The reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL). If the analyte was analyzed for but not detected, a "U" shall be entered.
- E The reported value is estimated because of the presence of interference. The serial dilution was not within control limits.
- N Spiked sample recovery not within control limits.
- \* Duplicate analysis not within control limits.

CRDL Client Requested Detection Limit, usually the limit of detection specified at your request. Might also be referred to as Contract Required Detection Limit.

RELEASE OF DATA

Laucks certifies that these results meet all requirements of the NELAC standards, except where otherwise noted.

"I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature."

Respectfully submitted,

Kara Godineaux  
Project Manager

*HOW TO CONTACT US:*

All Laucks Testing Laboratories staff members can be reached at the same telephone and facsimile numbers: (206) 767-5060 by phone, (206) 767-5063 by FAX.

*REQUESTS FOR DUPLICATE COPIES:*

This packet has been checked for accuracy. All pages are present and in sequential order. Please see Attachment B for a detailed record.

In the event that duplicate data copies are needed, Laucks will accommodate your request at a fee of twenty-five cents (\$0.25) per copy, plus shipping. If the data are in storage, there will also be a fee for retrieval.

**Cooler Receipt Form**  
**Laucks Testing Laboratories, Inc.**

SDG: CAB37

Taken By: CLIENT

Cooler: AAD697

Transferred: FED EX

COC #: 44354

Project: Camp Bonneville (PBS Engineering and Environmental)

Date samples were received at the laboratory: 9/20/2007

Date cooler was opened: 9/20/2007 9:15AM

**A. PRELIMINARY EXAMINATION PHASE:**

1. Did cooler come with a shipping slip (airbill, etc.)? ..... YES  
if YES, record carrier name and airbill number: 862054469037
2. Were custody seals unbroken and intact at the date and time of arrival? ..... INTACT  
Date On Custody Seal: \_\_\_\_\_ Custody Seals Description: ONE IN FRONT
3. Were custody papers sealed in a plastic bag and taped inside to the lid? ..... YES
4. Did you screen samples for radioactivity using the Geiger Counter? ..... NO
5. Were custody papers filled out properly (ink, signed, etc.)? ..... YES
6. Did you sign custody papers in the appropriate place? ..... YES
7. If required, was enough cooling material present? ..... YES
8. Have designated person initial here to acknowledge receipt of cooler: DDC

**B. LOG-IN PHASE:**

Date samples were logged-in: 9/20/2007 9:25AM

Logged-in by David Duk-Su-Chang

(sign) [Signature]

9. Describe type of packing in cooler:

ICE

10. Were all bottles sealed in separate plastic bags? ..... YES
11. Were labels in good condition? ..... YES
12. Were all bottle labels complete (ID,date,time signature,preservative,etc.)? ..... YES
13. Did all bottle labels agree with custody papers? ..... YES
14. Were correct containers used for the tests indicated? ..... YES
15. Were the correct pHs observed? ..... YES
16. Was a sufficient amount of sample sent for tests indicated? ..... YES
17. Were bubbles absent in VOA samples? ..... YES
18. Temperatures: 2.3

DISCREPANCIES:

Allowable temperature and pH ranges (neutral pH defined as a value between 5 and 9)

Temperature Allowable temperature range is 4+/- 2 degrees Celsius

Acid Preserved pH pH must be less than 2  
Base Preserved pH pH must be greater than 12  
NC Not Checked for pH

# Column to be used to flag recovery and RPD values with an asterisk

\* Values outside of QC limits

@ This RPD or percent recovery is not flagged as an exceedence because the Sample Found amount is five times or more than the Spike Added amount.

RPD: 7 out of 67 outside limitsSpike Recovery: 4 out of 134 outside limits

Calibration Factor ( CF ) = Response divided by Concentration

Percent Difference ( %D ) = (Ave CF - Cont CF) divided by AveCF times 100

\* = Percent Difference is outside the acceptance limits of +/-15%

# = The compound retention time is the expected retention time in the method.

| Compound              | Level 1  | Level 2  | Level 3  | Level 4  | Level 5  | Ave CF   | %RSD |
|-----------------------|----------|----------|----------|----------|----------|----------|------|
| 1 Nitroglycerin       | 348.3440 | 362.3640 | 357.0210 | 378.5100 | 373.9440 | 364.0366 | 3.4  |
| 3 PETN                | 384.2240 | 428.2400 | 383.0820 | 416.1968 | 409.5208 | 404.2527 | 4.9  |
| 2 3,4-Dinitrofluorene | 833.5840 | 891.7440 | 836.9660 | 887.3984 | 879.7140 | 865.8817 | 3.3  |
| Average RSD :         |          |          |          |          |          |          | 3.9  |

Amount = Response divided by CF

CF = Calibration Factor ( response divided by concentration ).

RSD = Relative Standard Deviation.

| Average RSD :        |         |          |          |          |          |          |          | 4.8  |

Amount = Response divided by CF

+++ - Standard Level not used in linearity determination.

CF - Calibration Factor ( response divided by concentration ) .  
 RSD - Relative Standard Deviation.

# = RPD Value is not flagged as an outlier because either the parent found amount or duplicate found amount or both are less than five times the reporting limit

\* = Value exceeded established control limits

The concentration values on this report may have non-significant digits tabulated. These are the same values used to compute the recovery and/or RPD values listed and are available during data review to verify our calculations.

DIESEL ORGANICS ANALYSIS DATA SHEET

CLIENT SAMPLE NO.

16LCMW04DWMS

Lab Name: Laucks Testing Labs  
 SDG No.: CAB37  
 Matrix: (SOIL/WATER) Water  
 Sample wt/vol: 490.0 (g/mL) mL  
 % Moisture: \_\_\_\_\_ Decanted: (Y/N) N  
 Extraction: (Type) SEPF  
 Concentrated Extract Volume: 1000.0 (uL)  
 Injection Volume: 2.0 (uL)  
 GPC Cleanup: (Y/N) N pH: <2

Contract: N/A  
 Run Sequence: R022927  
 Lab Sample ID: CAB37-003MS  
 Lab File ID: CA270737.d  
 Date Collected: 09/19/2007  
 Date Extracted: 09/25/2007  
 Date Analyzed: 10/28/2007  
 Dilution Factor: 1.0  
 Sulfur Cleanup: (Y/N) N

| CAS NO.    | COMPOUND              | CONCENTRATION UNITS:<br>mg/L | Q   |
|------------|-----------------------|------------------------------|-----|
| TPH-Diesel | Diesel Range Organics | 1.1                          |     |
| TPH-Oil    | Oil Range Organics    | 0.41                         | ~UZ |

**FORMS SUMMARY**

**CAB37**

**Miscellaneous Inorganics**

# Laucks Testing Laboratories, Inc.

## Final Results

**Client:** PBS Engineering and Environmental  
**Project:** Camp Bonneville  
**SDG Number:** CAB37  
**Sample Number:** 16LCMW04SW  
**Date/Time Collected:** 09/19/2007 10:15  
**Lab Sample ID:** CAB37-002  
**Date/Time Received:** 09/20/2007 09:15  
**Method:** E150.1  
**Unit:** pH Units

# = RPD Value is not flagged as an outlier because either the parent found amount or duplicate found amount or both are less than five times the reporting limit

\* = Value exceeded established control limits

The concentration values on this report may have non-significant digits tabulated. These are the same values used to compute the recovery and/or RPD values listed and are available during data review to verify our calculations.

Seattle, WA 98108

Picric/Picramic\*:

We are accredited by NELAP for the attenuation compounds through our SOP LTL-8303 rev. 10 by EPA 8330.

TOC:

Singleton analysis was performed for this project as approved by the client. This modification is less expensive and meets project DQOs but does not meet NELAC guidelines.

### Sample Receipt Comments:

There were no anomalies associated with the receipt of these samples.

### **GENERAL REMARKS ON ORGANIC ANALYSES:**

The following comments describe general analysis conditions. For remarks specific to the samples reported in this case, see "SPECIFIC REMARKS ON ORGANIC ANALYSIS."

#### Manual Integrations:

One or more analytes may have been manually integrated on the data system quantitation reports. All manual integrations have been flagged, initialed, and dated by the analyst. A list of the manual integration flags is detailed below.

|    |  |
|----|--|
| M  | Manual integration due to irregular peak shape |
| MS | Manual integration due to split peak           |
| MR | Manual integration due to retention time shift |
| MI | Manual integration of correct isomer           |
| MT | Manual integration due to peak tailing         |
| MB | Manual integration due to irregular baseline   |

### Holding Time Compliance:

#### *Volatile Organic Compounds:*

The holding time is 14 days calculated from date of collection in both soil and water samples. All samples were analyzed within holding time.

#### *Semi-Volatile Organic Compounds:*

The holding time to extraction is 7 days in water and 14 days in soil calculated from the date of collection. In either case, the holding time from extraction to analysis is 40 days. All samples were extracted and analyzed within holding time.

#### *Ordnance, PETN/Nitroglycerin, Picric Acid*

The holding time to extraction is 7 days in water and 14 days in soil calculated from the date of collection. The holding time from extraction to analysis is 40 days. All samples were originally extracted within holding times, however, re-extraction for ordnance and picric/picramic acid were performed outside of holding times. See comments below. All samples were analyzed within holding time.

## LAUCKS TESTING LABORATORIES

940 S. Harney  
Seattle, WA 98108

### *TPH Gasoline Fraction:*

The holding time for analysis is 14 days in water and soil calculated from the date of collection. All samples were analyzed within holding times.

### *TPH Diesel Fraction:*

The holding time to extraction, which is calculated from the date of collection, is 7 days for water samples and 14 days for soil samples. In either case, the holding time from extraction to analysis is 40 days. All samples were extracted and analyzed within holding times.

### **Volatile Fraction (8260):**

#### Initial Calibration Verification:

In the ICV performed on 9/29/2007 2,2-dichloropropane exceeded 25% due to increased response. Because this analyte was not on the list for this SDG, no further action was taken.

#### Continuing Calibration Verification (CCV):

In the CCV performed on 10/2/2007 the percent D value for carbon tetrachloride exceeded 20% due to increased response. This analyte was not detected in any associated samples so no further action was taken.

#### Quality Control Analyses:

MS/MSD analyses were not performed due to insufficient sample volume. All spiking analytes in the blank spike analysis recovered within control limits.

### **Semivolatiles Fraction:**

#### Second Source Calibration Verification (ICV):

Analysis of the ICV performed on 10/23/2007 yielded a %D value for 2,4-dinitrophenol that exceeded 25% due to increased response. This analyte was not detected in the associated sample, no action was taken. In addition, analysis of this ICV also yielded a %D value for benzidine that exceeded 25% due to decreased response. Benzidine is subject to oxidative losses and poor chromatographic behavior. However, because sample results are reported well below the reporting limit (RL) the chance of reporting any false negatives for benzidine at the RL is negligible.

### **Ordinance Fraction:**

#### Blank Spike Analysis:

Analysis of the blank spike prepared on 09/26/2007 yielded low recoveries for HMX and RDX. The samples were re-extracted 4 days after the holding time had expired. Analyses of the re-extracted samples yielded acceptable recovery results. Data from both analyses have been submitted.

### **PETN/Nitroglycerin Fraction:**

#### Surrogate Recoveries:

Analyses of sample extracts 16L4MW17W and blank spike S092607HORWLG2 yielded surrogate recoveries that exceeded the upper control limit. Because the recoveries were high and there were no target analytes detected in any associated samples, no further action was taken.

## LAUCKS TESTING LABORATORIES

940 S. Harney  
Seattle, WA 98108

### Picric Acid Fraction:

#### Blank Spike Analysis:

Analysis of the blank spike prepared on 09/25/2007 resulted in recoveries for all analytes and the surrogate that were outside of the control limits. The samples were re-extracted 9 days after holding time had expired. Analyses of the re-extracted samples yielded acceptable recovery results. Data from both analyses have been submitted.

### NWTPH Gasoline Fraction:

NWTPHG was used to quantitate the samples for gasoline. Gasoline range responses were determined by summing the responses of all components, resolved and unresolved, between toluene and naphthalene. Quantitation is based on average calibration factor.

All quality control parameters were met.

### NWTPH Diesel Fraction:

NWTPH-Dx was used to quantitate the samples for diesel and oil. Diesel range responses were determined by summing the responses of all components, resolved and unresolved, between C<sub>12</sub> and C<sub>24</sub> integrated to a horizontal baseline. Oil range responses were determined by summing the responses of all components, resolved and unresolved, between C<sub>24</sub> and C<sub>40</sub> integrated to a horizontal baseline. Quantitation was based on a linear regression.

All quality control parameters were met.

### **GENERAL REMARKS ON INORGANIC ANALYSES:**

The following comments describe general analysis conditions. For remarks specific to the samples reported in this case, see "SPECIFIC REMARKS ON INORGANIC ANALYSES."

#### ICP Metals:

On the first timed and dated page of each ICP-MS run, the data to be reported or rejected will be tabulated for that run.

#### Mercury:

For Liquids:

Laucks purchases a 1000 mg/L Hg stock solution from Inorganic Ventures. The 0.5 mg/L working standard is made by diluting 100 µL to 200 mL with 0.15% HNO<sub>3</sub>. The calibration curve is made by placing 0, 20, 50, 100, 200, 500 and 1000 µL of the working standard digestion vessels and diluting up to 50 mL. The standard curve is equivalent to 0, 0.2, 0.5, 1.0, 2.0, 5.0 and 10.0 µg/L.

Seattle, WA 98108

**SPECIFIC REMARKS ON INORGANIC ANALYSES:**

Holding Time Compliance:

Laucks calculates holding time compliance for inorganic determinations using the date on which reportable data were acquired.

Metals:

The holding time for metals is six months from the date of collection, excepting mercury, which is 28 days. All analyses were performed within holding time.

Miscellaneous:

The following analytes do not have a Contract Laboratory Program holding time. The holding times tabulated below derive from the relevant EPA methods and are applicable when the sample was appropriately preserved and/or cooled. All samples submitted followed the preservation guidelines unless explicitly noted otherwise.

| <u>Analyte</u>           | <u>Holding Time</u> | <u>Violations</u> |
|--------------------------|---------------------|-------------------|
| Alkalinity               | 14 days             | None              |
| Chloride                 | 28 days             | None              |
| Nitrate                  | 48 hours            | None              |
| Nitrite                  | 48 hours            | None              |
| Sulfate                  | 28 days             | None              |
| Total Organic Carbon     | 28 days             | None              |
| Dissolved Organic Carbon | 28 days             | None              |
| Total Suspended Solids   | 7 days              | None              |
| Perchlorate              | 28 days             | None              |
| pH                       | 24 hours            | None              |

ICP-MS Metals:

For the run sequence R022083, arsenic and zinc were removed from the high point (Standard 5) of the calibration curve. As a result, no sample results for arsenic or zinc were reported above 100 ug/L. Data have not been flagged for this event.

Mercury:

No comments.

Miscellaneous Inorganics:

No comments.

### ABBREVIATIONS

Several abbreviations can appear in our reports. The most commonly employed abbreviations are as follows:

- U The analyte of interest was not detected to the limit of detection indicated.
- SDL Sample Detection Limit. The SDL can vary from sample to sample, depending on sample size, matrix interferences, moisture content and other sample-specific conditions.
- PQL Practical Quantitation Limit. The limit is drawn from the test method and usually represents the SDL multiplied by a matrix-specific factor.
- DB Dry Basis. The value reported has been back-calculated to normalize for the moisture content of the sample.
- AR As-Received. The value has not been normalized for moisture.

### ORGANIC ANALYSES:

- B When used in relation to organics fractions, the "B" flag indicates that the analyte of interest was detected in the method blank associated with the sample, as well as in the sample itself. The "B" flag is applied without regard to the relative concentrations detected in the blank and sample.
  - J The analyte of interest was detected below the routine reporting limit. This value should be regarded as an estimate.
  - T The flagged values represent the SUM of two co-eluting compounds. The SUM of these two values is shown as though it were a result for each of them. The two figures should not be added together.
  - E The flagged value was reported from an analysis that exceeded the linear range of the instrument. See additional comments for further discussion of the circumstances. Values so flagged should be considered estimates.
  - P When a dual column GC technique is employed, this flag indicates that test results from the two columns differ by more than 25%. Generally, we report the higher value.
  - C The flagged analyte has been confirmed by GC/MS analysis. The value reported may be derived from either the initial or confirmatory (GC/MS) analysis. See specific report comments for details.
- CRQL Client requested Quantitation Limit, usually the limit of detection specified at your request. Might also be referred to as Contract Required Quantitation Limit.

## LAUCKS TESTING LABORATORIES

940 S. Harney  
Seattle, WA 98108

### INORGANIC ANALYSES:

- J The reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL). If the analyte was analyzed for but not detected, a "U" shall be entered.
- E The reported value is estimated because of the presence of interference. The serial dilution was not within control limits.
- N Spiked sample recovery not within control limits.
- \* Duplicate analysis not within control limits.

CRDL Client Requested Detection Limit, usually the limit of detection specified at your request. Might also be referred to as Contract Required Detection Limit.

RELEASE OF DATA

Laucks certifies that these results meet all requirements of the NELAC standards, except where otherwise noted.

"I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature."

Respectfully submitted,

  
Kara Godineaux  
Project Manager

(DATE)

  
Harry Romberg  
Quality Assurance Officer

11/8/07  
(DATE)

*HOW TO CONTACT US:*

All Laucks Testing Laboratories staff members can be reached at the same telephone and facsimile numbers: (206) 767-5060 by phone, (206) 767-5063 by FAX.

*REQUESTS FOR DUPLICATE COPIES:*

This packet has been checked for accuracy. All pages are present and in sequential order. Please see Attachment B for a detailed record.

In the event that duplicate data copies are needed, Laucks will accommodate your request at a fee of twenty-five cents (\$0.25) per copy, plus shipping. If the data are in storage, there will also be a fee for retrieval.

CUSTODY SEAL  Y  N  NA

Barbara PB5 / BARBARA LANEY  
 DATE 9/20/07 TIME 5:50pm  
 RECEIVED BY Elizabeth G. Lane

**Cooler Receipt Form**  
**Laucks Testing Laboratories, Inc.**

SDG: CAB38  
Cooler: AAP098  
COC #: 44357

Taken By: CLIENT  
Transferred: FEDEX

Project: Camp Bonneville (PBS Engineering and Environmental)

Date samples were received at the laboratory: 9/21/2007  
Date cooler was opened: 9/21/2007 8:25AM

**A. PRELIMINARY EXAMINATION PHASE:**

1. Did cooler come with a shipping slip (airbill, etc.)? ..... YES  
if YES, record carrier name and airbill number: 862453847370
2. Were custody seals unbroken and intact at the date and time of arrival? ..... INTACT  
Date On Custody Seal: Custody Seals Description: 1 IN FRONT
3. Were custody papers sealed in a plastic bag and taped inside to the lid? ..... YES
4. Did you screen samples for radioactivity using the Geiger Counter? ..... NO
5. Were custody papers filled out properly (ink, signed, etc.)? ..... YES
6. Did you sign custody papers in the appropriate place? ..... YES
7. If required, was enough cooling material present? ..... YES
8. Have designated person initial here to acknowledge receipt of cooler: EG

**B. LOG-IN PHASE:**

Date samples were logged-in: 9/21/2007 8:35AM

Logged-in by Elizabeth Golden (sign) Elizabeth Golden

9. Describe type of packing in cooler:

**ICE**

10. Were all bottles sealed in separate plastic bags? ..... NO
11. Were labels in good condition? ..... YES
12. Were all bottle labels complete (ID,date,time signature,preservative,etc.)? ..... YES
13. Did all bottle labels agree with custody papers? ..... YES
14. Were correct containers used for the tests indicated? ..... YES
15. Were the correct pHs observed? ..... YES
16. Was a sufficient amount of sample sent for tests indicated? ..... YES
17. Were bubbles absent in VOA samples? ..... YES
18. Temperatures: 3.0

DISCREPANCIES:

Calibration Factor ( CF ) = Response divided by Concentration

Percent Difference ( %D ) = (Ave CF - Cont CF) divided by AveCF times 100

\* = Percent Difference is outside the acceptance limits of +/-15%

# = The compound retention time is the expected retention time in the method.

Calibration Factor ( CF ) = Response divided by Concentration

Percent Difference ( %D ) = (Ave CF - Cont CF) divided by AveCF times 100

\* = Percent Difference is outside the acceptance limits of +/-15%

# = The compound retention time is the expected retention time in the method.

## **SAMPLE RECEIPT, IDENTIFICATION, AND GENERAL COMMENTS:**

### **Sample Receipt and Identification:**

The samples submitted under the laboratory number(s) indicated above were identified and analyzed as tabulated below. The samples were collected and received on the dates noted on the enclosed chain-of-custody copies, Attachment A.

| <b>Client<br/>Sample<br/>Identification</b> | <b>Laucks<br/>Sample<br/>Identification</b> | <b>Testing<br/>Analytical<br/>Request</b> |
|---|---|---|

| TRIP BLANK                                  | CAB39-002                                   | VOA                                       |
| 16L4MW03AW                                  | CAB39-003                                   | VOA/ORD/INO                               |
| 16L4MW03BW                                  | CAB39-004                                   | VOA/ORD/INO                               |
| 16L4MW05AW                                  | CAB39-005                                   | VOA/ORD/INO                               |

### **Analytical Request Key:**

|       |                           |
|-------|---------------------------|
| VOA = | Volatile Organics (8260B) |
| ORD = | Ordnance (8330)           |
|       | PETN/Nitroglycerin (8332) |
| INO = | Perchlorate (314.0)       |

### **Picric/Picramic\*:**

We are accredited by NELAP for the attenuation compounds through our SOP LTL-8303 rev. 10 by EPA 8330.

### **Sample Receipt Comments:**

The following discrepancies were noted in association with the receipt of these samples.

The temperature blank was measured at a temperature above the control limit of  $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ . The client was notified of this discrepancy on September 24, 2007 via email. The laboratory was instructed to proceed with analysis.

## LAUCKS TESTING LABORATORIES

940 S. Harney  
Seattle, WA 98108

### GENERAL REMARKS ON ORGANIC ANALYSES:

The following comments describe general analysis conditions. For remarks specific to the samples reported in this case, see "SPECIFIC REMARKS ON ORGANIC ANALYSIS."

#### Manual Integrations:

One or more analytes may have been manually integrated on the data system quantitation reports. All manual integrations have been flagged, initialed, and dated by the analyst. A list of the manual integration flags is detailed below.

|    |  |
|----|--|
| M  | Manual integration due to irregular peak shape |
| MS | Manual integration due to split peak           |
| MR | Manual integration due to retention time shift |
| MI | Manual integration of correct isomer           |
| MT | Manual integration due to peak tailing         |
| MB | Manual integration due to irregular baseline   |

#### Holding Time Compliance:

##### *Volatile Organic Compounds:*

The holding time is 14 days calculated from date of collection in both soil and water samples. All samples were analyzed within holding time.

##### *Ordnance, PETN/Nitroglycerin:*

The holding time to extraction is 7 days in water and 14 days in soil calculated from date of collection. The holding time from extraction to analysis is 40 days. All samples were extracted and analyzed within holding time.

#### Volatile Fraction (8260):

##### Initial Calibration Verification:

In the ICV performed on 9/27/2007 1,1-dichloroethene exceeded 25% difference due to decreased response. Analysis of the daily second source standard (S100607MVOWM1) yielded recovery values that were within 25%. No further action was taken.

##### Quality Control Analyses:

MS/MSD analyses were not performed due to insufficient sample volume. All spiking analytes in the blank spike analysis recovered within control limits.

#### Ordnance Fraction:

All quality control parameters were met.

**LAUCKS TESTING LABORATORIES**

940 S. Harney  
Seattle, WA 98108

**PETN/Nitroglycerin Fraction:**

**Surrogate Recovery:**

Analysis of the blank spike prepared on 09/26/2007 yielded a surrogate recovery that slightly exceeded the upper control limit. Because all other surrogates were in control, no further action was taken.

**SPECIFIC REMARKS ON INORGANIC ANALYSES:**

**Holding Time Compliance:**

Laucks calculates holding time compliance for inorganic determinations using the date on which reportable data were acquired.

**Miscellaneous:**

The following analytes do not have a Contract Laboratory Program holding time. The holding times tabulated below derive from the relevant EPA methods and are applicable when the sample was appropriately preserved and/or cooled. All samples submitted followed the preservation guidelines unless explicitly noted otherwise.

| <u>Analyte</u> | <u>Holding Time</u> | <u>Violations</u> |
|----------------|---------------------|-------------------|
| Perchlorate    | 28 days             | None              |

**Miscellaneous Inorganics:**

No comments.

## LAUCKS TESTING LABORATORIES

Seattle, WA 98108

### ABBREVIATIONS

Several abbreviations can appear in our reports. The most commonly employed abbreviations are as follows:

- U The analyte of interest was not detected to the limit of detection indicated.
- SDL Sample Detection Limit. The SDL can vary from sample to sample, depending on sample size, matrix interferences, moisture content and other sample-specific conditions.
- PQL Practical Quantitation Limit. The limit is drawn from the test method and usually represents the SDL multiplied by a matrix-specific factor.
- DB Dry Basis. The value reported has been back-calculated to normalize for the moisture content of the sample.
- AR As-Received. The value has not been normalized for moisture.

### ORGANIC ANALYSES:

- B When used in relation to organics fractions, the "B" flag indicates that the analyte of interest was detected in the method blank associated with the sample, as well as in the sample itself. The "B" flag is applied without regard to the relative concentrations detected in the blank and sample.
- J The analyte of interest was detected below the routine reporting limit. This value should be regarded as an estimate.
- T The flagged values represent the SUM of two co-eluting compounds. The SUM of these two values is shown as though it were a result for each of them. The two figures should not be added together.
- E The flagged value was reported from an analysis that exceeded the linear range of the instrument. See additional comments for further discussion of the circumstances. Values so flagged should be considered estimates.
- P When a dual column GC technique is employed, this flag indicates that test results from the two columns differ by more than 25%. Generally, we report the higher value.
- C The flagged analyte has been confirmed by GC/MS analysis. The value reported may be derived from either the initial or confirmatory (GC/MS) analysis. See specific report comments for details.
- ~ This result has been identified as non-primary based on the analyst's professional judgment.
- CRQL Client requested Quantitation Limit, usually the limit of detection specified at your request. Might also be referred to as Contract Required Quantitation Limit.

## LAUCKS TESTING LABORATORIES

940 S. Harney  
Seattle, WA 98108

### INORGANIC ANALYSES:

- J The reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL). If the analyte was analyzed for but not detected, a "U" shall be entered.
  - E The reported value is estimated because of the presence of interference. The serial dilution was not within control limits.
  - N Spiked sample recovery not within control limits.
  - \* Duplicate analysis not within control limits.
- CRDL Client Requested Detection Limit, usually the limit of detection specified at your request. Might also be referred to as Contract Required Detection Limit.

RELEASE OF DATA

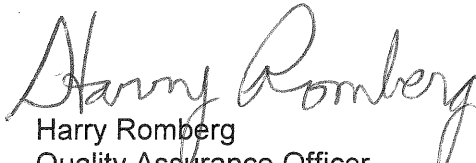

Laucks certifies that these results meet all requirements of the NELAC standards, except where otherwise noted.

"I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature."

Respectfully submitted,

  
for Kara Godineaux  
Project Manager

11/12/07

*HOW TO CONTACT US:*

All Laucks Testing Laboratories staff members can be reached at the same telephone and facsimile numbers: (206) 767-5060 by phone, (206) 767-5063 by FAX.

*REQUESTS FOR DUPLICATE COPIES:*

This packet has been checked for accuracy. All pages are present and in sequential order. Please see Attachment B for a detailed record.

In the event that duplicate data copies are needed, Laucks will accommodate your request at a fee of twenty-five cents (\$0.25) per copy, plus shipping. If the data are in storage, there will also be a fee for retrieval.

FINAL REPORT COPY

**Cooler Receipt Form**  
**Laucks Testing Laboratories, Inc.**

SDG: CAB39 Taken By: CLIENT

Cooler: AAD695 Transferred: CLIENT

COC #: 44360

Project: Camp Bonneville (PBS Engineering and Environmental)

Date samples were received at the laboratory: 9/24/2007

Date cooler was opened: 9/24/2007 8:15AM

**A. PRELIMINARY EXAMINATION PHASE:**

1. Did cooler come with a shipping slip (airbill, etc.)? ..... YES  
if YES, record carrier name and airbill number: **8624 5384 7391**
2. Were custody seals unbroken and intact at the date and time of arrival? ..... INTACT  
Date On Custody Seal: ..... Custody Seals Description: **ONE IN FRONT.**
3. Were custody papers sealed in a plastic bag and taped inside to the lid? ..... YES
4. Did you screen samples for radioactivity using the Geiger Counter? ..... NO
5. Were custody papers filled out properly (ink, signed, etc.)? ..... YES
6. Did you sign custody papers in the appropriate place? ..... YES
7. If required, was enough cooling material present? ..... NO
8. Have designated person initial here to acknowledge receipt of cooler:     *ML*

**B. LOG-IN PHASE:**

Date samples were logged-in: **9/24/2007 8:25AM**  
Logged-in by     Zoriah Weith     (sign)     *[Signature]*    

9. Describe type of packing in cooler:

**ICE/WATER**

10. Were all bottles sealed in separate plastic bags? ..... NO
11. Were labels in good condition? ..... YES
12. Were all bottle labels complete (ID,date,time signature,preservative,etc.)? ..... YES
13. Did all bottle labels agree with custody papers? ..... YES
14. Were correct containers used for the tests indicated? ..... YES
15. Were the correct pHs observed? ..... YES
16. Was a sufficient amount of sample sent for tests indicated? ..... YES
17. Were bubbles absent in VOA samples? ..... YES
18. Temperatures: 7.7

DISCREPANCIES:

*Client was notified of temp.  
Lab was instructed to proceed  
with analysis KWG 9/24/07*

| 2 3,4-Dinitrofluorene | 833.5840 | 891.7440 | 836.9660 | 887.3984 | 879.7140 | 865.8817 | 3.3  |
| Average RSD :         |          |          |          |          |          |          | 3.9  |

Amount = Response divided by CF

CF - Calibration Factor ( response divided by concentration ).  
 RSD - Relative Standard Deviation.

Date of Report: 11/12/2007

**SAMPLE RECEIPT, IDENTIFICATION, AND GENERAL COMMENTS:**

**Sample Receipt and Identification:**

The samples submitted under the laboratory number(s) indicated above were identified and analyzed as tabulated below. The samples were collected and received on the dates noted on the enclosed chain-of-custody copies, Attachment A.

| <b>Client<br/>Sample<br/>Identification</b> | <b>Laucks<br/>Sample<br/>Identification</b> | <b>Testing<br/>Analytical<br/>Request</b> |
|---|---|---|
| Trip Blank                                  | CAB40-001                                   | VOA                                       |
| 16L4MW02BW                                  | CAB40-002                                   | VOA/ORD/INO                               |
| 16L4MW02AW                                  | CAB40-003                                   | VOA/ORD/INO                               |

**Analytical Request Key:**

|       |                           |
|-------|---------------------------|
| VOA = | Volatile Organics (8260B) |
| ORD = | Ordnance (8330)           |
|       | PETN/Nitroglycerin (8332) |
| INO = | Perchlorate (314.0)       |

**Sample Receipt Comments:**

The following discrepancies were noted in association with the receipt of these samples.

Two of four amber glass bottles for sample #2 (16L4MW02BW) were received broken. One of three volatiles bottles submitted for sample #1 (Trip Blank) contained bubbles of less than 1/4 inch in size. The client was notified of discrepancies on September 25, 2007 via email.

## LAUCKS TESTING LABORATORIES

940 S. Harney  
Seattle, WA 98108

### GENERAL REMARKS ON ORGANIC ANALYSES:

The following comments describe general analysis conditions. For remarks specific to the samples reported in this case, see "SPECIFIC REMARKS ON ORGANIC ANALYSIS."

#### Manual Integrations:

One or more analytes may have been manually integrated on the data system quantitation reports. All manual integrations have been flagged, initialed, and dated by the analyst. A list of the manual integration flags is detailed below.

|    |  |
|----|--|
| M  | Manual integration due to irregular peak shape |
| MS | Manual integration due to split peak           |
| MR | Manual integration due to retention time shift |
| MI | Manual integration of correct isomer           |
| MT | Manual integration due to peak tailing         |
| MB | Manual integration due to irregular baseline   |

#### Holding Time Compliance:

##### *Volatile Organic Compounds:*

The holding time is 14 days calculated from date of collection in both soil and water samples. All samples were analyzed within holding time.

##### *Ordnance, PETN/Nitroglycerin, Picric Acid*

The holding time to extraction is 7 days in water and 14 days in soil calculated from date of collection. The holding time from extraction to analysis is 40 days. All samples were extracted and analyzed within holding time.

#### Volatile Fraction (8260):

##### Initial Calibration Verification:

In the ICV performed on 9/27/2007 1,1-dichloroethene exceeded 25% due to decreased response and carbon disulfide exceeded 25% due to increased response. Because analysis of the daily second source S100507MVOWM2 yielded recoveries for these analytes that were within 25%, no further action was taken.

##### Ordnance Fraction:

Analysis of sample extract 16L4MW02BW resulted in the detection of RDX that exceeded the linear calibration range. The extract was diluted accordingly and reanalyzed. Both sets of data have been submitted.

##### PETN/Nitroglycerin Fraction:

##### Surrogate Recovery:

Analysis of the blank spike prepared on 09/26/2007 yielded a surrogate recovery that slightly exceeded the upper control limit. Because all other surrogates were in control, no further action was taken.

**LAUCKS TESTING LABORATORIES**

940 S. Harney  
Seattle, WA 98108

**SPECIFIC REMARKS ON INORGANIC ANALYSES:**

Holding Time Compliance:

Laucks calculates holding time compliance for inorganic determinations using the date on which reportable data were acquired.

Metals:

The holding time for metals is six months from the date of collection, excepting mercury, which is 28 days. All analyses were performed within holding time.

Miscellaneous:

The following analytes do not have a Contract Laboratory Program holding time. The holding times tabulated below derive from the relevant EPA methods and are applicable when the sample was appropriately preserved and/or cooled. All samples submitted followed the preservation guidelines unless explicitly noted otherwise.

| <u>Analyte</u> | <u>Holding Time</u> | <u>Violations</u> |
|----------------|---------------------|-------------------|
| Perchlorate    | 28 days             | None              |

**Miscellaneous Inorganics:**

No comments.

## LAUCKS TESTING LABORATORIES

940 S. Harney  
Seattle, WA 98108

### ABBREVIATIONS

Several abbreviations can appear in our reports. The most commonly employed abbreviations are as follows:

- U The analyte of interest was not detected to the limit of detection indicated.
- SDL Sample Detection Limit. The SDL can vary from sample to sample, depending on sample size, matrix interferences, moisture content and other sample-specific conditions.
- PQL Practical Quantitation Limit. The limit is drawn from the test method and usually represents the SDL multiplied by a matrix-specific factor.
- DB Dry Basis. The value reported has been back-calculated to normalize for the moisture content of the sample.
- AR As-Received. The value has not been normalized for moisture.

### ORGANIC ANALYSES:

- B When used in relation to organics fractions, the "B" flag indicates that the analyte of interest was detected in the method blank associated with the sample, as well as in the sample itself. The "B" flag is applied without regard to the relative concentrations detected in the blank and sample.
  - J The analyte of interest was detected below the routine reporting limit. This value should be regarded as an estimate.
  - T The flagged values represent the SUM of two co-eluting compounds. The SUM of these two values is shown as though it were a result for each of them. The two figures should not be added together.
  - E The flagged value was reported from an analysis that exceeded the linear range of the instrument. See additional comments for further discussion of the circumstances. Values so flagged should be considered estimates.
  - P When a dual column GC technique is employed, this flag indicates that test results from the two columns differ by more than 25%. Generally, we report the higher value.
  - C The flagged analyte has been confirmed by GC/MS analysis. The value reported may be derived from either the initial or confirmatory (GC/MS) analysis. See specific report comments for details.
- CRQL Client requested Quantitation Limit, usually the limit of detection specified at your request. Might also be referred to as Contract Required Quantitation Limit.

**LAUCKS TESTING LABORATORIES**

940 S. Harney  
Seattle, WA 98108

INORGANIC ANALYSES:

- J The reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL). If the analyte was analyzed for but not detected, a "U" shall be entered.
  - E The reported value is estimated because of the presence of interference. The serial dilution was not within control limits.
  - N Spiked sample recovery not within control limits.
  - \* Duplicate analysis not within control limits.
- CRDL Client Requested Detection Limit, usually the limit of detection specified at your request. Might also be referred to as Contract Required Detection Limit.

FINAL REPORT COPY

**Cooler Receipt Form**  
**Laucks Testing Laboratories, Inc.**

SDG: CAB40 Taken By: CLIENT

Cooler: AAP071 Transferred: FED EX

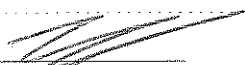

COC #: 44359

Project: Camp Bonneville (PBS Engineering and Environmental)

Date samples were received at the laboratory: 9/25/2007

Date cooler was opened: 9/25/2007 8:35AM

**A. PRELIMINARY EXAMINATION PHASE:**

1. Did cooler come with a shipping slip (airbill, etc.)? ..... YES  
if YES, record carrier name and airbill number: **8620 5446 9026**
2. Were custody seals unbroken and intact at the date and time of arrival? ..... INTACT  
Date On Custody Seal: \_\_\_\_\_ Custody Seals Description: **ONE IN FRONT.**
3. Were custody papers sealed in a plastic bag and taped inside to the lid? ..... YES
4. Did you screen samples for radioactivity using the Geiger Counter? ..... NO
5. Were custody papers filled out properly (ink, signed, etc.)? ..... YES
6. Did you sign custody papers in the appropriate place? ..... YES
7. If required, was enough cooling material present? ..... YES
8. Have designated person initial here to acknowledge receipt of cooler: 

**B. LOG-IN PHASE:**

Date samples were logged-in: 9/25/2007 8:45AM

Logged-in by Zoriah Weith (sign) 

9. Describe type of packing in cooler:

**ICE**

10. Were all bottles sealed in separate plastic bags? ..... NO
11. Were labels in good condition? ..... YES
12. Were all bottle labels complete (ID,date,time signature,preservative,etc.)? ..... YES
13. Did all bottle labels agree with custody papers? ..... YES
14. Were correct containers used for the tests indicated? ..... YES
15. Were the correct pHs observed? ..... YES
16. Was a sufficient amount of sample sent for tests indicated? ..... YES
17. Were bubbles absent in VOA samples? ..... NO
18. Temperatures: **1.4**

DISCREPANCIES:

TWO OF FOUR AMNBER GLASS BOTTLES FOR SAMPLE 2 WERE RECEIVED BROKEN. ONE OF ONE VIAL FOR SAMPLE 1 RECEIVED WITH AIR BUBBLS < 1/4".

Calibration Factor ( CF ) = Response divided by Concentration

Percent Difference ( %D ) = (Ave CF - Cont CF) divided by AveCF times 100

\* = Percent Difference is outside the acceptance limits of +/-15%

# = The compound retention time is the expected retention time in the method.

\* = RPD or recovery is outside the established control limits

The concentration values on this report may have non-significant digits tabulated. These are the same values used to compute the recovery and/or RPD values listed and are available during data review to verify our calculations.
