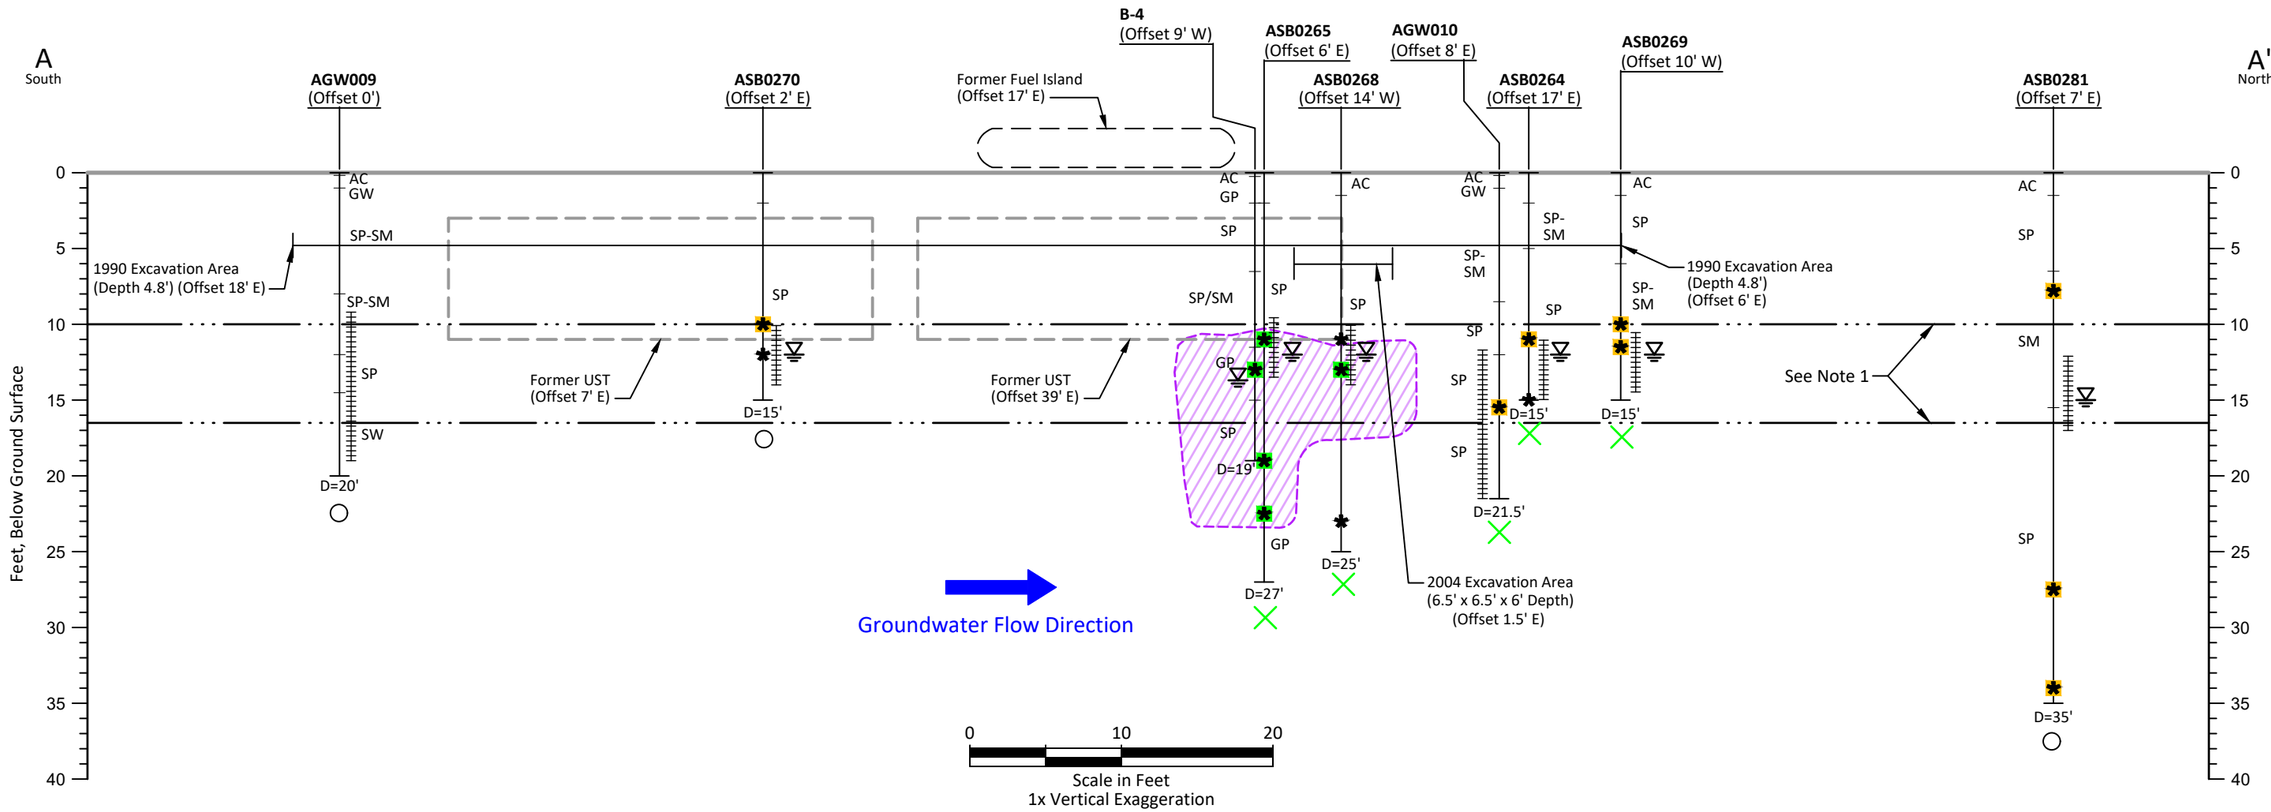
AOC A-01: Building 17-06 Former Underground Storage Tanks (TAU-01 and TAU-02) Exploration Summary

Figure
4-1



Legend

- **ASB0281** (offset: 7' E) — Exploration Designation
- Top of Exploration
- = Soil sample (Analytes = Not detected)
- = Soil sample (Analytes = Detected, below pCULs)
- = Soil sample (Analytes = Detected, above pCULs)
- SM — Unified Soil Classification Symbol (USCS)
- Water Level (At Time of Drilling)
- Screen Interval
- D=35' — Depth of Exploration (feet)
- = Analytes not detected in groundwater
- = Analytes detected below pCULs in groundwater
- = Analytes detected above pCULs in groundwater
- = Analytes detected above pCULs in soil

AOC A-01	Groundwater pCUL (µg/L)	Soil pCUL (mg/kg)
Benzene	5	2,400
Ethylbenzene	700	5.9
Toluene	640	280,000
Total Xylenes	1,600	14
GRO (a)	800/1,000	30/100
DRO	500	2,000

(a) Lower pCUL is used if benzene is detected; higher pCUL is used if benzene is not detected.

USCS Soil Legend

AC = asphalt/concrete pavement
GP = poorly graded gravel; gravel/sand mixture(s); little or no fines
GW = well-graded gravel; gravel/sand mixture(s); little or no fines
SM = silty sand; sand/silt mixture(s)
SP = poorly graded sand; gravelly sand; little or no fines
SW = well-graded sand; gravelly sand; little or no fines

Acronyms / Abbreviations

AOC = area of concern
DRO = diesel-range organics
GRO = gasoline-range organics
mg/kg = milligrams per kilogram
pCUL = proposed cleanup level
µg/L = micrograms per liter
UST = underground storage tank

Notes

1. Lines indicated show the maximum and minimum water level elevation measured from AGW009 or AGW010 from December 2003 to December 2018.
2. B-4, AGW009, and AGW010 were completed August 1991, and borings in the "ASB" series were completed June or August 2017.
3. Green, orange, and black symbols beneath monitoring wells reflect the most recent data.
4. Black and white reproduction of this color original may reduce its effectiveness and lead to incorrect interpretation.

Orange = Detection below pCUL
Green = Exceedance of pCUL

- Abondoned Piping (Approximate Location)
- 17-06 Current Building and Number
- Former Fuel Island Location
- Former 10,000-Gallon Underground Storage Tank Location
- 1990 Excavation Area
- 2004 Excavation Area

AOC A-01	Soil pCUL (mg/kg)
Benzene	2,400
Ethylbenzene	5.9
Toluene	280,000
Total Xylenes	14
GRO (a)	30/100
DRO	2,000

(a) 30 mg/kg is used if benzene is detected;
100 mg/kg is used if benzene is not detected

Notes

1. All analytes are shown in milligrams per kilogram (mg/kg).
2. In the data boxes: **Bold** text indicates detected analyte. Green shading indicates exceedance of proposed cleanup level (pCUL).
3. Hydrocarbons for Area of Concern (AOC) A-09 include GRO (gasoline-range organics) and DRO (diesel-range organics) only. ORO (oil-range organics) is not included because it does not exceed pCULs at any location.
4. Black and white reproduction of this color original may reduce its effectiveness and lead to incorrect interpretation.

-- = not analyzed
BTEX = benzene, toluene, ethylbenzene, total xylenes
ND = non-detect, the analyte was analyzed for, but was not detected
NE = no exceedance, one or more analytes were detected but do not exceed pCULs

Notes

1. All concentrations shown in micrograms per liter (µg/L.)
2. <0.2 = Compound not detected at indicated reporting limit.
3. Monitoring well results are the most recent.
4. Black well and boring symbols indicate locations where the compound was detected. Gray well and boring symbols indicate locations where the compound was not detected.
5. Multilevel wells have multiple channels. Channel designations are included in the well ID (e.g., AGW208-2).
6. Black and white reproduction of this color original may reduce its effectiveness and lead to incorrect interpretation.

Notes

1. Groundwater wells are identified by the AGW prefix. The designations behind the identifications indicate the zone. If there is no designation, the well is screened in the shallow zone. (I) = intermediate zone, (D) = deep zone, (M) = multi-level well; screens in multiple groundwater zones.
2. Well designations beginning with APP are installed and owned by WSDOT.
3. Black and white reproduction of this color original may reduce its effectiveness and lead to incorrect interpretation.

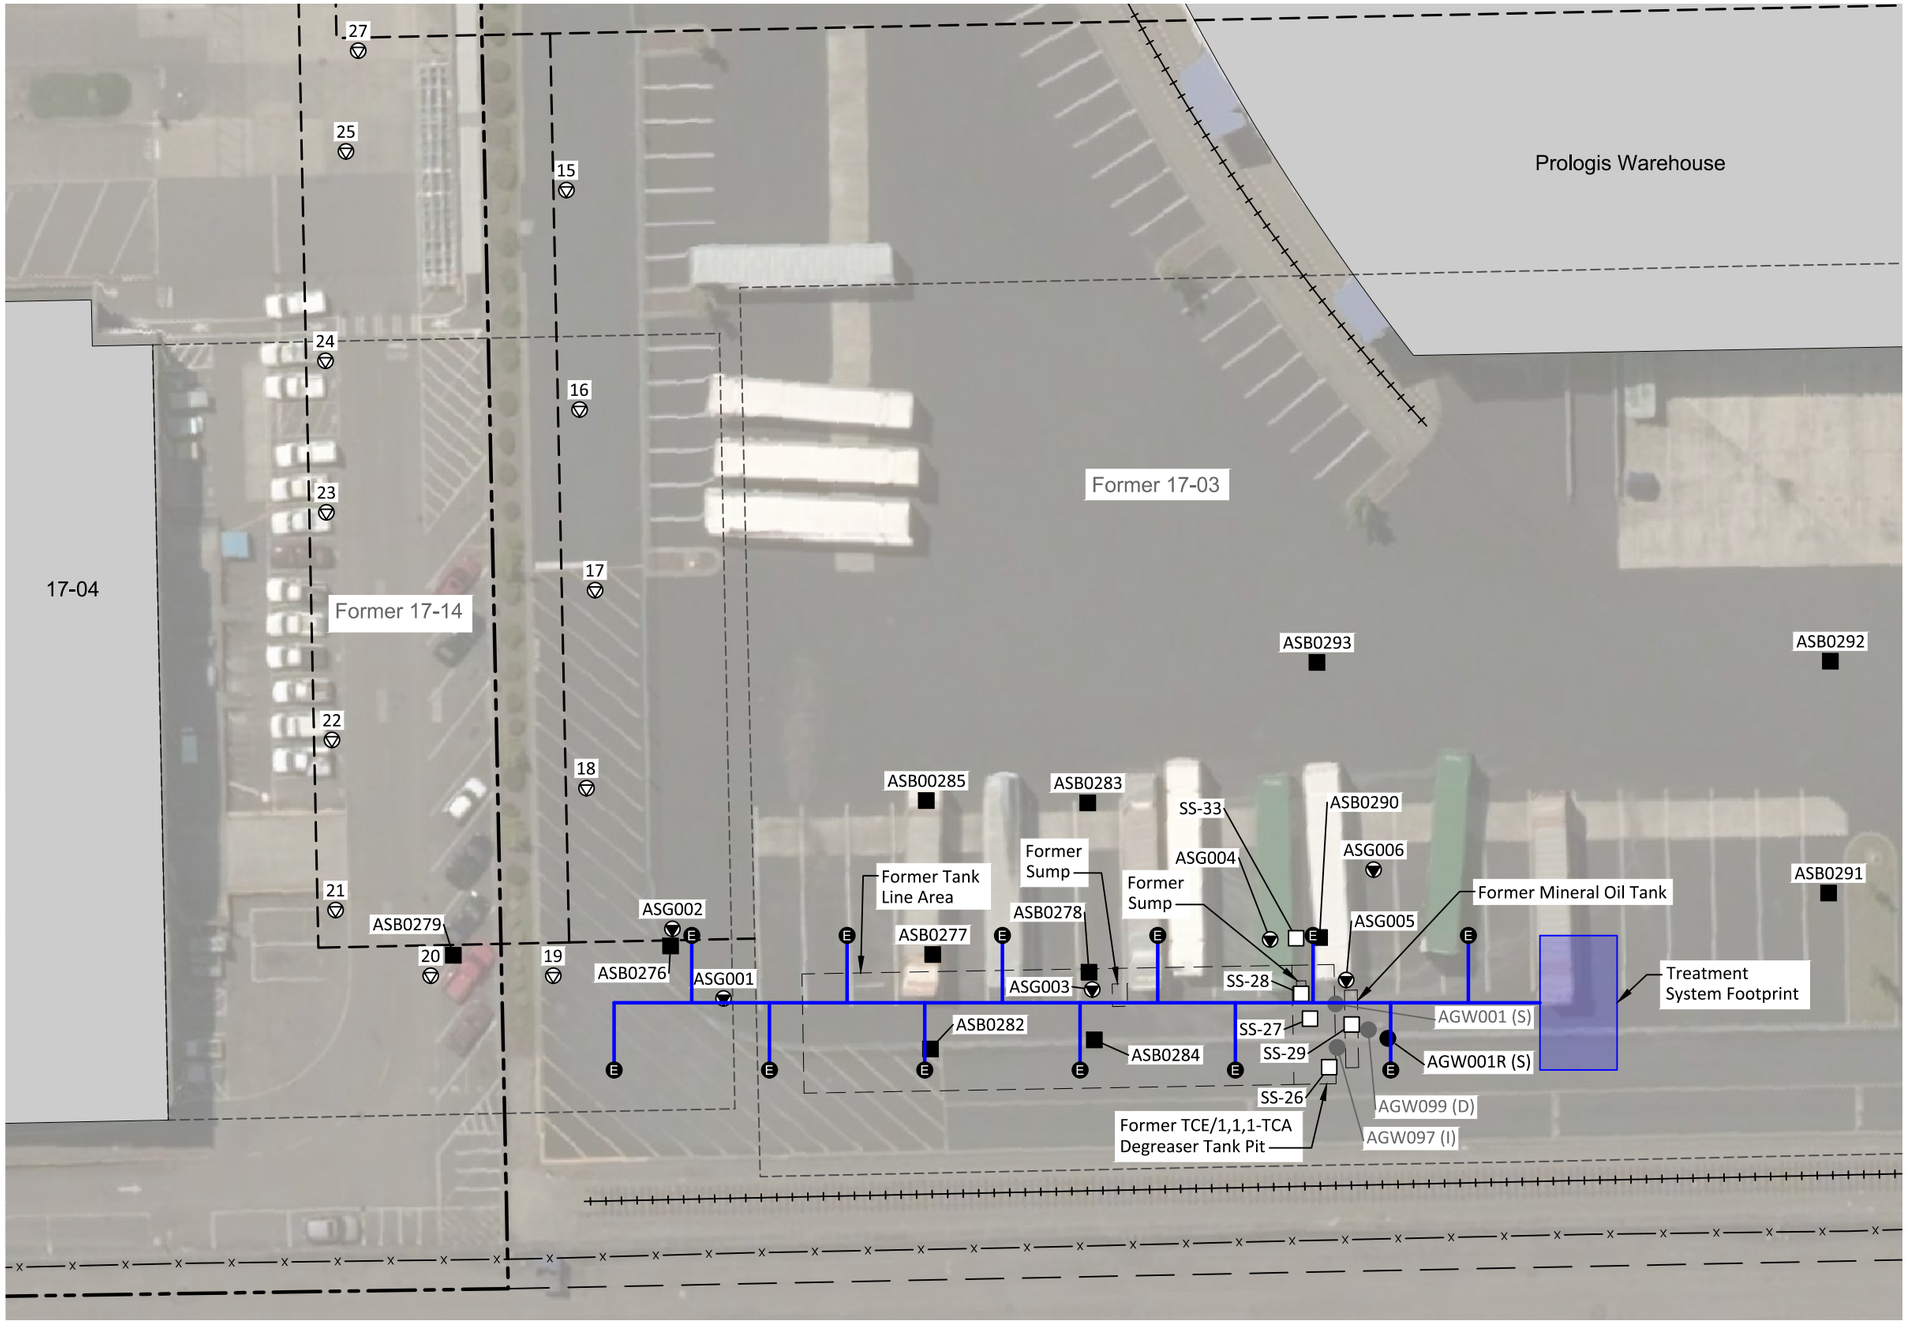
Landau Associates | G:\Projects\025\164\170\112\FS Report\AOC A-14\F05-06 AOC A-14 17-07 SVE Alt.dwg | 10/29/2019 3:12 PM

Legend

- Conceptual SVE Wellpoint
- ASB0280 — FS Boring Location
- SS-33 — Pre-FS Boring Location
- ASG001 — FS Soil Gas Sampling Location
- 18 — Pre-FS Soil Gas Location
- AGW001R (S) — Monitoring Well Location
- AGW001 (S) — Decommissioned Well Location
- 17-07 — Current Building and Number
- 17-14 — Former Building and Number
- Conceptual SVE Piping
- Boeing Property Line
- Adjacent Property Line
- Existing Fence Line
- Existing Railroad Track
- Chrome Waste Line



Notes

1. Groundwater monitoring wells are identified by the AGW prefix. The designations beside the identifications indicate the zone (S) = Shallow zone, (I) = Intermediate zone, (D) = deep zone.
2. Black and white reproduction of this color original may reduce its effectiveness and lead to incorrect interpretation.

Figure 5-7

Legend

- Proposed Injection Well Location
- Proposed Monitoring Well Location
- AGW050 — Monitoring Well Location
- AGR07-C9 — FS Boring Location
- B-1 — Pre-FS Boring Location
- SSV084 — FS Sub-slab Vapor Sampling Location
- SSV-31 — Pre-FS Sub-slab Vapor Sampling Location
- Tank Line Area
- D / 7 — Building 17-07 Column Designations
- Approximate Expected Extent of Electron Donor from Enhanced *In Situ* Bioremediation (EISB) Injection Activities

Notes

1. Groundwater wells are identified by the AGW prefix. The designations behind the identifications indicate the zone. (S) = shallow zone, (I) = intermediate zone, (D) = deep zone, (M) = multi-level well; screens in multiple groundwater zones.
2. Black and white reproduction of this color original may reduce its effectiveness and lead to incorrect interpretation.

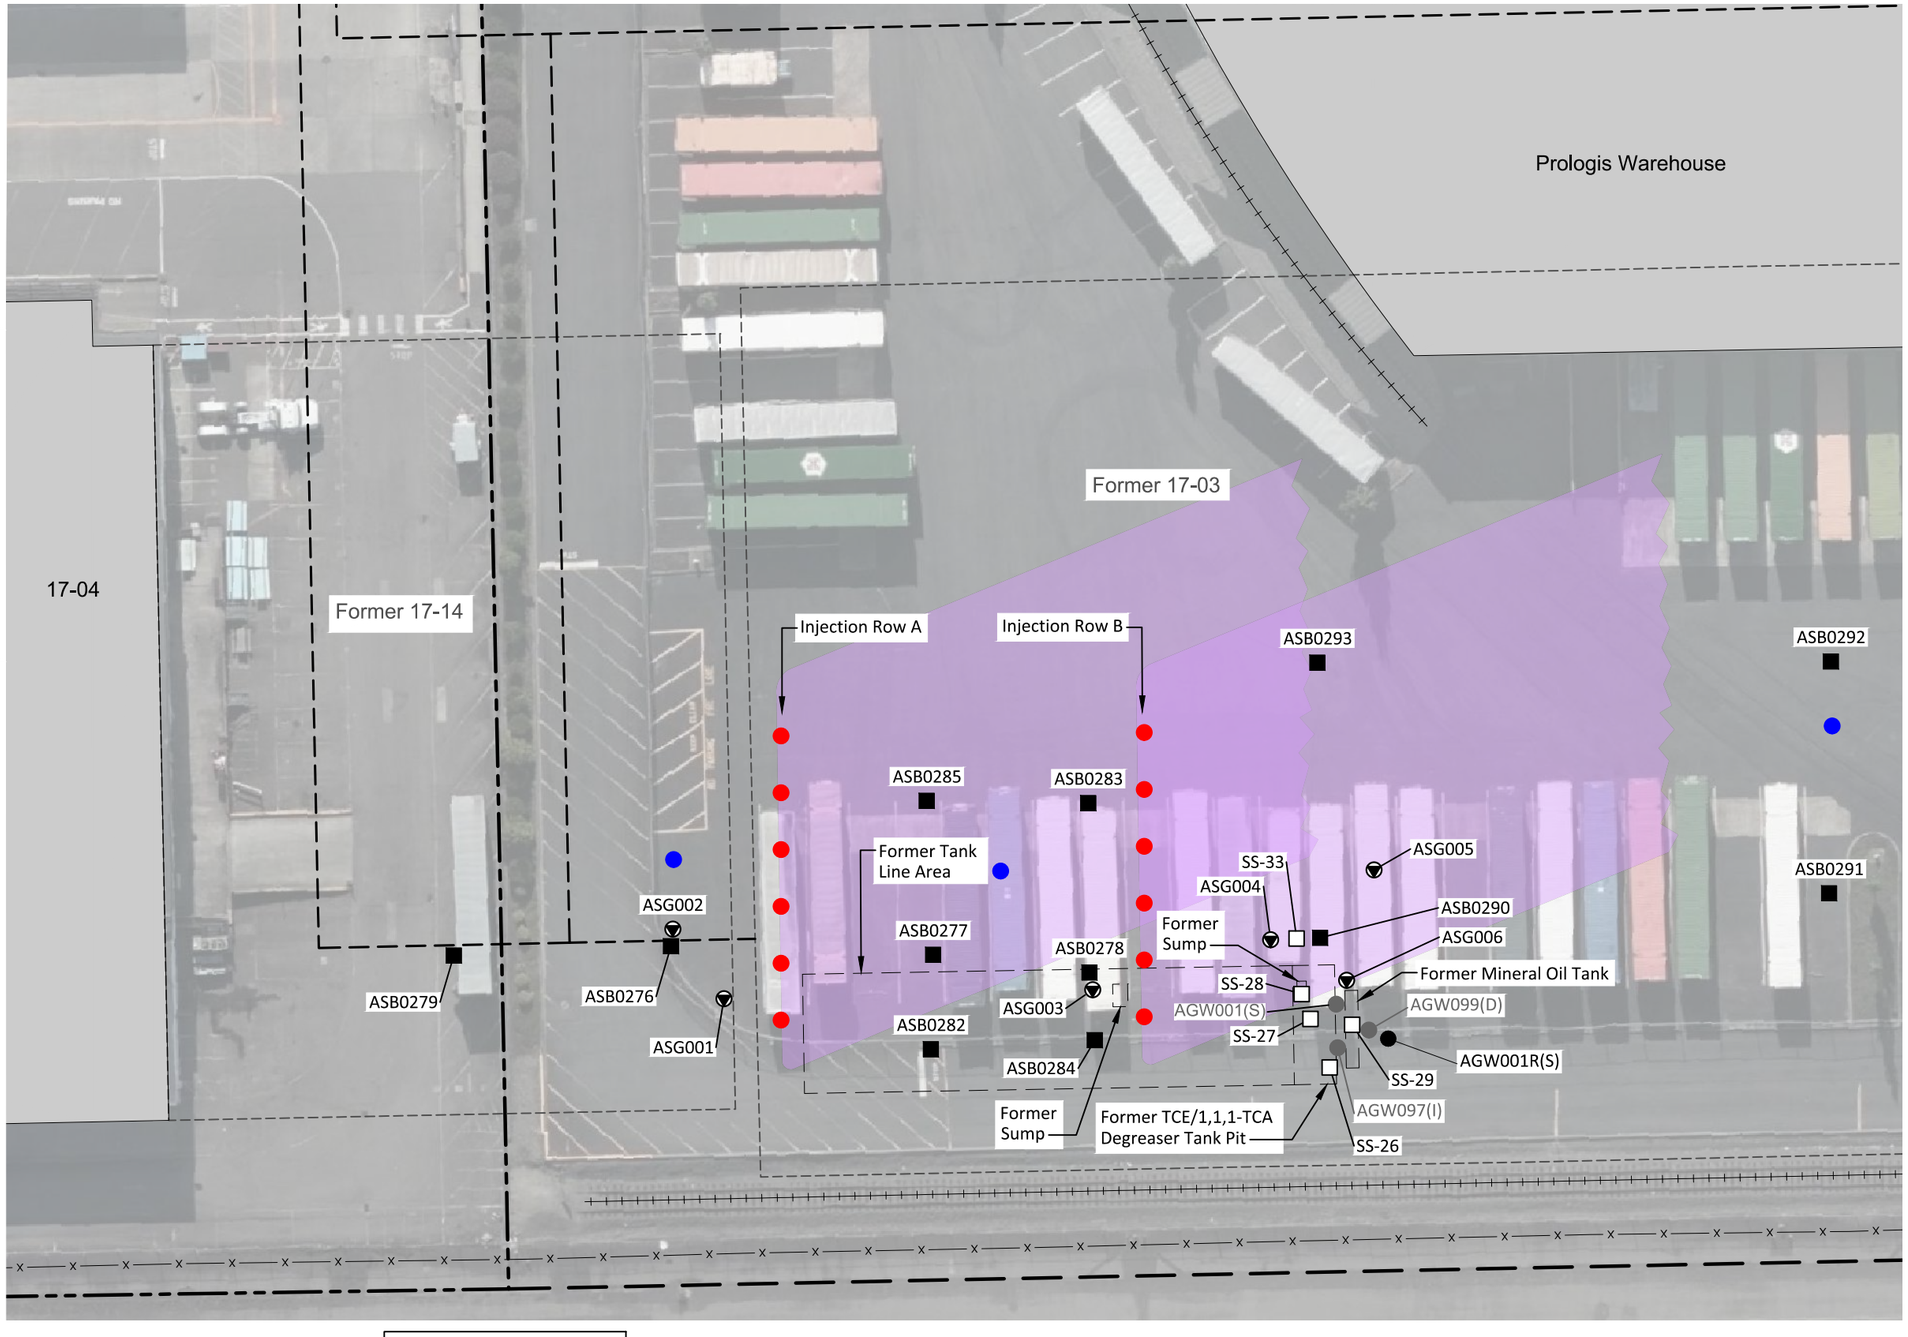
- Property Line
- Existing Fence Line
- Existing Railroad Track
- Former Chrome Waste Line
- Approximate Expected Extent of Electron Donor from Enhanced *In Situ* Bioremediation (EISB) Injection Activities



Notes

1. Groundwater borehole grab sample SS-33 was collected in October 1992.
2. Groundwater monitoring wells are identified by the AGW prefix. The designations beside the identifications indicate the zone (S) = Shallow zone, (I) = Intermediate zone, (D) = deep zone.
3. Black and white reproduction of this color original may reduce its effectiveness and lead to incorrect interpretation.

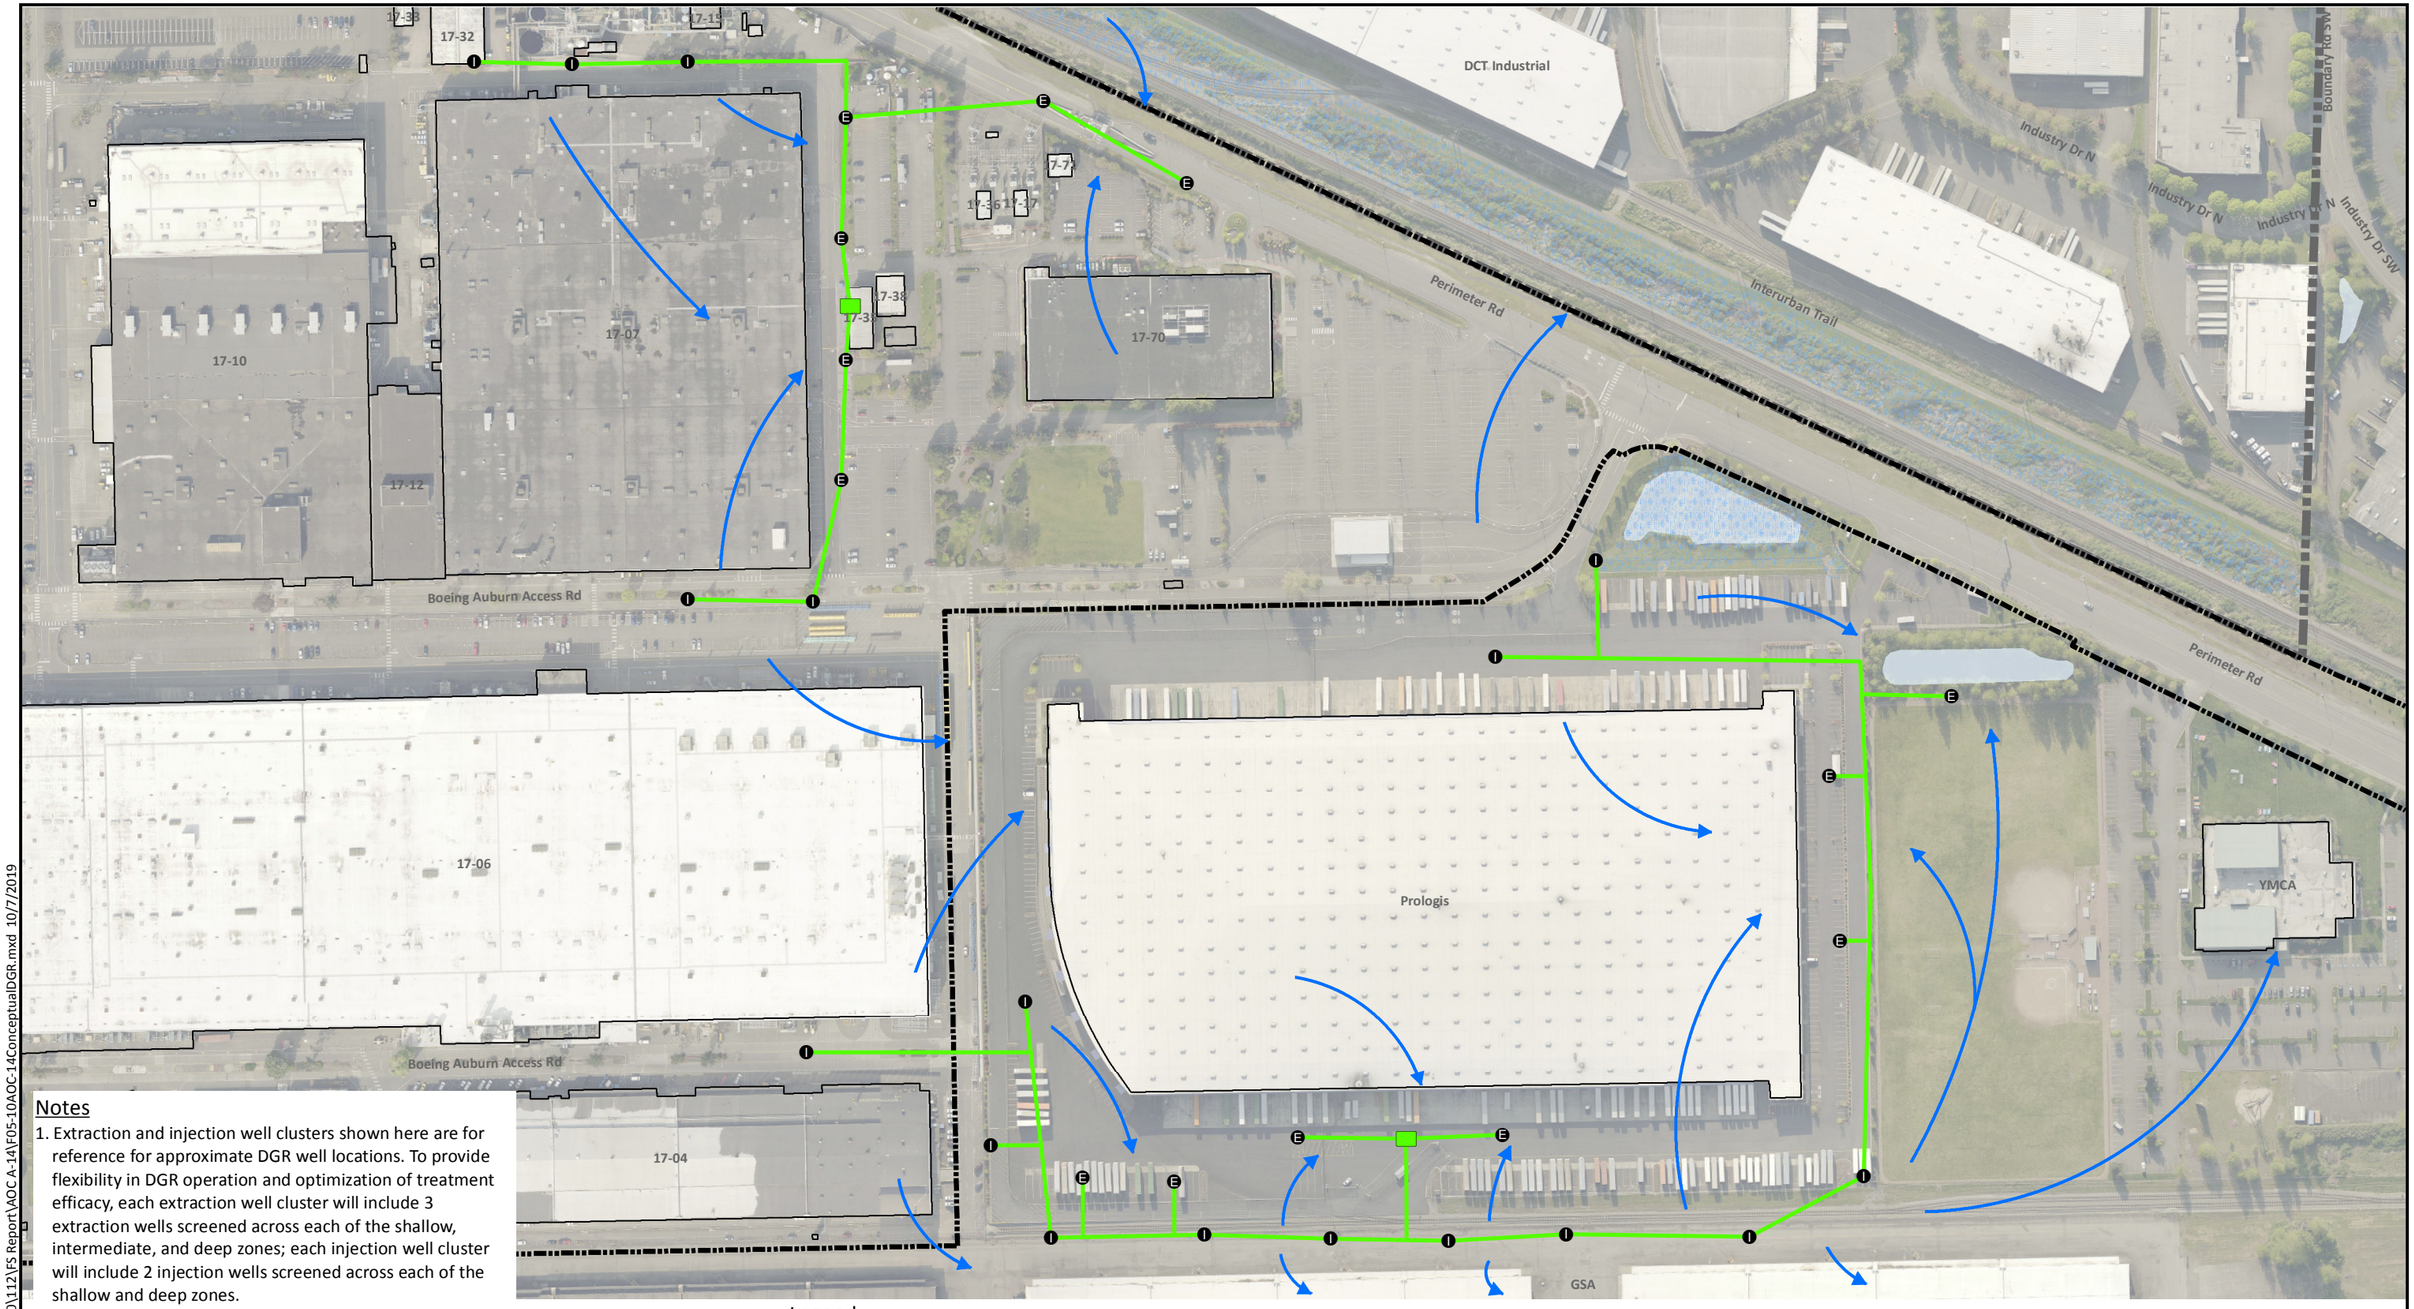
Figure 5-9



Notes

1. Extraction and injection well clusters shown here are for reference for approximate DGR well locations. To provide flexibility in DGR operation and optimization of treatment efficacy, each extraction well cluster will include 3 extraction wells screened across each of the shallow, intermediate, and deep zones; each injection well cluster will include 2 injection wells screened across each of the shallow and deep zones.
2. Extraction and injection wells are located to provide DGR treatment to known or presumed VOC source areas as well as to observed elevated VOC concentrations in groundwater.
3. Black and white reproduction of this color original may reduce its effectiveness and lead to incorrect interpretation.
