

Lab Search Progress Report
June 30th, 2022

Department of Ecology NWRO
PO Box 330316
Shoreline, WA 98133
Attention: Jeanne Tran

Jeanne,

We have continued to collaborate with other wood treaters and the chemical supplier, Viance. In consultation with a laboratory R&D expert, we have been advised that GC/MS (EPA 8270 SIM) is a possible method for detection of DCOI, and that there may be a laboratory able to conduct this analysis. We have shared this information with Viance for their review and feedback.

We will continue to assess the proposed methodology and are looking for an accredited lab willing to work with us and the Department of Ecology to establish a standardized methodology.

Thank you,

Kevin Moseley
Technical Director
