Receipt

The samples were received on 7/26/2023 11:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 6.0° C.

GC/MS Semi VOA

Method 625.1: The laboratory control sample (LCS) for preparation batch 280-622313 and analytical batch 280-622450 recovered outside control limits for the following analytes: Hexachloroethane and 1,2,4-Trichlorobenzene. The associated sample(s) was re-prepared and/or re-analyzed outside holding time. Both sets of data have been reported.

Methods 625.1: The continuing calibration verification (CCV) associated with batch 280-622450 recovered outside acceptance criteria, low biased, for Hexachlorocyclopentadiene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Methods 625.1, : Internal Standard (ISTD) retention times for the following sample was outside the acceptance criteria of +/-0.5 minutes from the mid-point of the initial calibration: (CCVIS 280-622450/3). The sample(s) were within +/-0.5 minutes from the daily calibration verification; therefore, no corrective action was required per the laboratory's SOP.

Methods 625.: The continuing calibration verification (CCV) associated with batch 280-622971 recovered outside acceptance criteria, low biased, for 2,4-Dimethylphenol and Hexachlorocyclopentadiene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Methods 625.1: The continuing calibration verification (CCV) associated with batch 280-622971 recovered above the upper control limit for Bis(2-ethylhexyl) phthalate and Diethyl phthalate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: effluent composite (580-129893-1) and (CCVIS 280-622971/3).

Methods 625.1: Internal Standard (ISTD) retention times for the following sample was outside the acceptance criteria of +/-0.5 minutes from the mid-point of the initial calibration: (CCVIS 280-622971/3). The sample(s) were within +/-0.5 minutes from the daily calibration verification; therefore, no corrective action was required per the laboratory's SOP.

Methods 625.1: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 280-622825 and analytical batch 280-622971 recovered outside control limits for the following analytes: 2-Chloronaphthalene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 625.1: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 280-622825 and analytical batch 280-622971 recovered outside control limits for the following analytes: Benzidine.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method 608.3: The laboratory control sample duplicate (LCSD) for preparation batch 410-403192 and analytical batch 410-4033 recovered outside control limits for the following analytes: Endrin aldehyde. The associated sample(s) was re-prepared and/or re-analyzed within holding time and the LCSD is again outside control limits for Endrin aldehyde; therefore, the data have been reported. effluent composite (580-129893-2)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
