RE: O&M Manual Review/Update and Settling Pond Sediment Depth – ST0006081

The Port of Longview has reviewed its Operations & Maintenance (O&M) Manual per S4.A. of its NPDES permit ST0006081 (permit) and has made no substantial changes that would require submission to Ecology for review. The Port has added Appendix J to the manual to more specifically document operating SOPs and has uploaded these instructions to the WQWebPortal with this confirmation letter. The Port also uploaded the revised compliance manual with Appendix J listed in the table of appendices.

S4.A. of the permit also requires the Port to report the settling pond sediment depth at the inlet with this annual update. The Port has uploaded with this letter an updated table of settling pond sediment depth measurements.

The remaining appendices not mentioned above did not require updates or revisions.

Sincerely,

Sean Kelly
Environmental Field Manager
