## COMMENTS/EXPLANATIONS

We continue to exceed the Zinc benchmark value (117 µg/L). We did one source tracking sample from a roof downspout in Discharge Area C. It also exceeded the benchmark value - 560 µg/L. We propose to install a filter manufactured by Contech to reduce Zinc discharges. We also will start sampling for Copper and lead as required by the Industrial Permit.

Turbidity benchmark was also exceeded this quarter. This was likely a result of extended dry periods before sampling. Sediments likely accumulated over the dry months and caused the sample to exceed the benchmark. A site inspection was conducted and no visible contributors to turbidity were discovered. (e.g. eroding slopes, construction, etc. -).

### Capitol Improvements:

Replace seawall in 2008 and include Contech devices to filter SW runoff from Discharge Area C. Seawall replacement is in the process of being permitted. Anticipate permitting will be complete by February, 2008. Construction in work window of August-March 2008/2009.
