

STATE OF WASHINGTON  
DEPARTMENT OF ECOLOGY

4601 N Monroe Street • Spokane, Washington 99205-1295 • (509)329-3400

January 27, 2015

Mr. Kevin Rasler  
President and General Manager  
Inland Empire Paper Company  
3320 N. Argonne Road  
Spokane, WA 99212

RE: Inland Empire Paper Co. NPDES Permit No. WA-0000825  
Inspection of Wastewater Treatment Facilities,

Dear Mr. Rasler:

I have enclosed the NPDES inspection report from my site visit on June 26, 2014. I apologize for the delay in finalizing this report. Based on the inspection, I have rated your facility in compliance with the terms and conditions of your NPDES permit.

There were only a couple of items noted on the inspection report.

1. Your permit contains a typographical error in the date for the permit renewal application. The renewal application should be due by April 30, 2016 (180 days prior to expiration), not on April 30, 2015, the date listed in the current permit. We plan to send corrected pages in the very near future.
2. For permit monitoring and reporting, you should ensure that for continuous monitoring charts, the date, time, and individual is recorded for anyone who collects, reads and reports chart data. In addition, we are aware that you may have tested the effluent for ammonia more often than once per month, the frequency specified by the permit. If not reported on the DMR form, we are requesting that you send us the results (with appropriate signature certification) for these months.

I wish to thank Doug Krapas for his assistance during the inspection. Please review the report and if you have any questions, please feel free to call me at (509) 329-3500.

Sincerely,

Pat Hallinan  
Water Quality Section

Section D: Summary of Findings/Comments

**Permit:** Ecology re-issued Inland Empire Paper Company's NPDES permit in November, 2011 with an expiration date of October 31, 2016. The Permit contained an error for the due date of the permit renewal application. The permit listed a date of April 30, 2015, which should be April 30, 2016 (180 days prior to the permit expiration date). Ecology plans to correct this error as a minor permit modification.

The Permittee operates a groundwood pulp mill and newsprint paper mill. The facility produces pulp from fiber recycling (newsprint, office paper, etc.) and thermo-mechanical pulping (TMP) of wood chips. Current production runs about 550 tons per day of newsprint with recycle fiber at about 26 tons per day.

**Records/Reports:** The Permittee has submitted all reports required by the permit. Recent documents include annual status reports related to the compliance schedule and limits for total phosphorus, CBOD, and ammonia, which includes a BMP Plan, compliance schedule update, and delta management plan. The Permittee also submitted an Ecology accepted scope of work for PCB source identification study. The study includes a sampling plan for internal wastestreams, noncontact cooling water and final effluent in order to identify/quantify PCBs within the facility. The sampling is ongoing, with results expected from the contract laboratory in the 1<sup>st</sup> quarter of 2015.

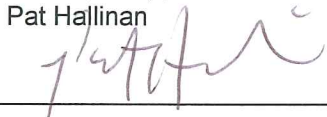

The attached table lists a discharge monitoring report summary from January 2012 through September 2014. The facility exceeded daily maximum permit limits for BOD in May 2012 and again in April 2013. The May 2012 violation resulted from inadequate nutrient addition to the wastewater treatment system due to a plugged line. The April 2013 exceedence was caused by an excess release of defoamer into the wastewater system. For both incidents, the company promptly implemented measures to prevent any reoccurrences. In August 2014, the company exceeded interim limits for the daily maximum limit for phosphorus in August 2014. This was caused by a breakage of a sight tube that leaked into the secondary containment system. After a rainfall event, mill personnel transferred the water in the containment system into the wastewater treatment system.

For recordkeeping on chart recordings (e.g. pH), recommended the facility record the person who collects these recordings as well as reads and reports chart data (minimum and maximum).

**Facility Site Review:** Wastewater treatment consists of primary clarification, biological treatment in both a moving bed biofilm reactors (MBBR) and a carousel system, and secondary clarification prior to discharge to the Spokane River. The facility uses one 75' diameter clarifier for flow/organic load equalization. During production of brighter papers, the Permittee diverts the resulting higher strength flows into this clarifier, for later treatment in the wastewater system.

The facility has constructed a 0.1 mgd algae based pilot treatment system (trade name Clearas Water Recovery) for effluent phosphorus removal. During the inspection, facility was operating the system and evaluating two membrane filter technologies for algae/water separation (see attached photographs). The Permittee is currently conducting additional trials on two additional membrane filter units.

Self-Monitoring Program: The permit requires testing of the final effluent for ammonia once per month. The Permittee had sampled ammonia more frequently for several months and these results may have not reported on the DMR form.

**ANNOUNCED** Inspection

---

**INSTRUCTIONS****Section A: National Data System Coding (i.e., PCS)**

**Column 1: Transaction Code.** Use N, C, or D for New Change or Delete. All inspections will be new unless there is an error in the data entered.

**Columns 3-11: NPDES Permit No.** Enter the facility's NPDES permit number. *(Use the Remarks columns to record State permit number, if necessary.)*

**Columns 12-17: Inspection Date.** Insert the date entry was made into the facility. Use the year/month/day format (e.g., 94/06/30 = June 30, 1994).

**Column 18: Inspection Type.** Use one of the codes listed below to describe the type of inspection:

A Performance Audit	L Enforcement Case Support	2 IU Sampling Inspection
B Compliance Biomonitoring	M Multimedia	3 IU Non-Sampling Inspection
C Compliance Evaluation (non-sampling)	P Pretreatment Compliance Inspection	4 IU Toxics Inspection
D Diagnostic	R Reconnaissance	5 IU Sampling Inspection with Pretreatment
E Corps of Engineers Inspection	S Compliance Sampling	6 IU Non-Sampling Inspection with pretreatment
F Pretreatment Follow-up	U IU Inspection with Pretreatment Audit	7 IU Toxics with Pretreatment
G Pretreatment Audit	X Toxics Inspection	
I Industrial User (IU) Inspection	Z Sludge	

**Column 19: Inspector Code.** Use one of the codes listed below to describe the *lead agency* in the inspection.

C - Contractor or Other Inspectors <i>(Specify in Remarks Columns)</i>	N - NEIC Inspectors
E - Corps of Engineers	R - EPA Regional Inspector
J - Joint EPA/State Inspectors - EPA Lead	S - State Inspector
	T - Joint State/EPA Inspectors - State Lead

**Column 20: Facility Type.** Use one of the codes below to describe the facility.

- 1 - Municipal. Publicly Owned Treatment Works (POTWs) with 1987 Standard Industrial Code (SIC) 4952.
- 2 - Industrial. Other than municipal, agricultural, and Federal facilities.
- 3 - Agricultural. Facilities classified with 1987 SIC 0111 to 0971.
- 4 - Federal. Facilities identified as Federal by the EPA Regional Office

**Columns 21-66: Remarks.** These columns are reserved for remarks at the discretion of the Region.

**Columns 67-69: Inspection Work Days.** Estimate the total work effort (to the nearest 0.1 work day), up to 99.9 days, that were used to complete the inspection and submit a QA reviewed report of findings. This estimate includes the accumulative effort of all participating inspectors; any effort for laboratory analyses, testing, and remote sensing; and the billed payroll time for travel and pre and post inspection preparation. This estimate does not require detailed documentation.

**Column 70: Facility Evaluation Rating.** Use information gathered during the inspection (regardless of inspection type) to evaluate the quality of the facility self-monitoring program. Grade the program using a scale of 1 to 5 with a score of 5 being used for very reliable self-monitoring programs, 3 being satisfactory, and 1 being used for very unreliable programs.

**Column 71: Biomonitoring Information.** Enter D for static testing. Enter F for flow through testing. Enter N for no biomonitoring.

**Column 72: Quality Assurance Data Inspection.** Enter Q if the inspection was conducted as follow-up on quality assurance sample results. Enter N otherwise.

**Columns 73-80:** These columns are reserved for regionally defined information.

**Section B: Facility Data**

This section is self-explanatory except for "Other Facility Data," which may include new information not in the permit or PCS (e.g., new outfalls, names of receiving waters, new ownership, and other updates to the record).

**Section C: Areas Evaluated During Inspection**

Check only those areas evaluated by marking the appropriate box. Use Section D and additional sheets as necessary. Support the findings, as necessary, in a brief narrative report. Use the headings given on the report form (e.g., Permit, Records/Reports) when discussing the areas evaluated during the inspection. The heading marked "Multimedia" may indicate medias such as CAA, RCRA, and TSCA. The heading marked "Other" may indicate activities such as SPCC, BMPs, and concerns that are not covered elsewhere.

**Section D: Summary of Findings/Comments**

Briefly summarize the inspection findings. This summary should abstract the pertinent inspection findings, not replace the narrative report. Reference a list of attachments, such as completed checklists taken from the NPDES Compliance Inspection Manuals and pretreatment guidance documents, including effluent data when sampling has been done. Use extra sheets as necessary.

Photographer: Pat Hallinan

#	Description	Photographs
1	Heat exchangers used to cool process wastewater prior to discharge into the wastewater treatment system.	
2	Sand filters at effluent flume which are part of algae based pilot treatment system (trade name Clearas Water Recovery). The facility initially used the filters in the pilot, but switched to basket strainers instead.

#	Description	Photographs
3	Basket strainers that replaced sand filtration for the algae based pilot treatment system.	
4	Refiner reject fiber. The facility trucks the fiber offsite for use in compost (the fiber is too wet to burn onsite). The pile generates some water which flows into the stormwater system then into the wastewater treatment system.

#	Description	Photographs
7	Trial filtration unit at algae based pilot treatment system. The filter resembles a plate and frame unit with outside to inside flow across the membrane.	
8	Another trial membrane at the algae based pilot treatment system. This membrane is a bundle of fibers, with flow moving from outside to inside.

#	Description	Photographs
9	Close-up of membrane bundle.	 A close-up photograph of a membrane bundle, showing a white, pleated, and slightly wrinkled material, likely a microfiltration or ultrafiltration membrane, with a blue plastic cover visible at the top left.
10	Orbal aeration basin. The facility also uses moving bed bioreactors to reduce BOD prior to the Orbal basin.	 A photograph of an Orbal aeration basin, showing a large, rectangular concrete structure with a chain-link fence in the foreground. The basin contains a moving bed bioreactor with yellow, fibrous material (likely biofilm) attached to a rotating drum. The background shows industrial buildings and a cloudy sky.

11	Clarifier presently used as temporary storage for higher strength wastewater flows. The permittee then meters the collected wastewater back into the wastewater treatment system.
