You must send a Discharge Monitoring Report (DMR) to Ecology **every quarter**. If there was **no discharge**, you have **suspended sampling** because of consistent attainment of benchmark values, mark the appropriate boxes and send the DMR to Ecology. Please read the instructions before completing the DMR.

## COMMENTS / EXPLANATIONS

## Oil &amp; Grease

During visual monitoring at the time of sampling Oil Sheen discoloration and turbidity were noted. This is due to heavy traffic, dusting from the plant next door and the inability to sweep on our regular schedule because of weather. We have contracted with a vacuum sweeper service to be sweeping monthly at the end of February 2006. Other than the oil sheen no unusual conditions were found to explain the high levels of Oil & Grease. Again our lab samples resulted in high zinc levels. All source control methods from our level Two Response have not been completed. Weather permitting (painting) these will be done by the end of the second quarter.

**COMMENTS / EXPLANATIONS**

Visual inspection at the time of sampling revealed no unusual conditions. Upon further inspections two potential sources of turbidity were found. Both are small gravel and dirt areas that are near catch basins. We annually patch and pave our yard as general maintenance and these areas will be included. Again our lab samples resulted in high zinc levels. All source control methods from our level Two Response have not been completed. Weather permitting (painting) these will be done by the end of the second quarter.

## COMMENTS / EXPLANATIONS

Due to high water levels in the receiving drain ditch it is not possible to safely sample the storm water at sample point A. The city of Tacoma was notified and there are plans to dig out the ditch within the next three years. The storm water is filtered by a storm water management storm filter. Sampling will begin when the ditch is cleaned and the water levels are lowered.
