A monitoring manhole will be installed at the Rec Center. All installations will monitor based on demand for flow, pH and temperature.

Changes in wastewater disposal methods: Interior campus re-routing projects will be constructed to reduce the number of connections to the City of Cheney sewer system from nine to four connection points. At each new outlet location monitoring manholes will be installed. As noted above, monitoring will be demand based and effluent will be monitored for flow, pH and temperature.

Schedule for these improvements: Construction schedule for these improvements is during the upcoming permit cycle.

SECTION E. WASTEWATER INFORMATION

1. How are the water intake and effluent flows measured?

Intake: Metered

Effluent Tawanka and the PUB are metered. Science, Rozell, the URC and perimeter connections to the city sewer system will have meters installed as part of the permit construction projects. Flows were projected based on building use/population.

2. Describe the collection method for the samples analyzed below. (*i.e.*, grab, 24-hour composite). Applicants must collect grab samples (not composites) for analysis of pH, temperature, cyanide, total phenols, residual chlorine, oil and grease, fecal coliform (including *E. coli*), and Enterococci (previously known as fecal streptococcus at § 122.26 (d)(2)(iii)(A)(3)), or volatile organics.

Quarterly grab test, Spaced Interval for a 24 hr composite sample is the current method of collection. New sampling manholes to monitor flow, pH, temperature and provide composite sampling is scheduled for construction.

3. Has the effluent been analyzed for any other parameters than those identified in question E.4.? ☐ YES ☒ NO
If yes, attach results and label as attachment E.4. This data must clearly show the date, method and location of sampling. (*Note: Ecology may require additional testing.*)

4. Provide measurements or range of measurements for treated wastewater prior to discharge to the POTW for the parameters with an "X" in the left column. If you obtain the application from the internet, contact Ecology's regional office to see if testing for a subset of these parameters is permissible. All analyses (except pH) must be conducted by a laboratory registered or accredited by Ecology (WAC 173-216-125). If this is an application for permit renewal, provide data for the last year for those parameters that are routinely measured. For parameters measured only for this application, place the values under "Maximum." Report the values with units as specified in the parameter name or in the detection level.

The Permittee must use the specified analytical methods, detection limits (DLs) and quantitation levels (QLs) in the following table unless Ecology approves an alternate method or the method used produces measurable results in the sample and EPA has listed it as an EPA approved method in 40 CFR Part 136. If the Permittee uses an alternative method as allowed above, it must report the test method, DL, and QL on the discharge monitoring report or in the required report.
