INTRODUCTION

Eurofins TestAmerica – Corvallis (ET-C) Aquatic Toxicology Laboratory conducted toxicity testing on samples from the Jacobs - Spokane County Regional Water Reclamation Facility, Spokane, Washington.

Testing was conducted on behalf of: Jacobs

The Project Name was: Spokane County Regional Water Reclamation facility

Testing was initiated on: July 9, 2019

The test was conducted using:

- the fathead minnow (*Pimephales promelas*)

OVERVIEW OF REGULATORY GUIDANCE

The following provides an overview and excerpts of applicable permit specifics, regulatory guidance, and other relevant information. This is intended only as a helpful guide, from a laboratory perspective, for understanding test outcomes. The final responsibility for interpretation of results remains with the client and/or regulatory agency.

The following guidance is taken from ET-C's reading of the NPDES permit for Spokane County Regional Water Reclamation Facility (permit #WA0093317, effective Dec 1, 2011, expired Nov 31, 2016). At the time of testing, no additional permit information was available.

Chronic toxicity:

- *Effluent Limit for Chronic Toxicity:*
 - “No toxicity detected in a test concentration representing the chronic critical effluent concentration (CCEC).”
 - “The CCEC equals 8.4% effluent.”
- *Compliance with the Effluent Limit for Chronic Toxicity:*
 - “Compliance with the effluent limit for chronic toxicity means the results ... show no statistically significant difference in response between the control and the CCEC.”
 - “The Permittee must determine the statistical significance by conducting a hypothesis test at the 0.05 level of significance ...” (i.e. alpha = 0.05)
 - “If the difference in survival between the control and the CCEC is less than 20 percent, ... must conduct the hypothesis test at the 0.01 level of significance.”
- *Compliance Testing for Chronic Toxicity:*
 - “Conduct quarterly chronic toxicity testing on the final effluent ...”
 - “... using the following species on a rotating basis ...”

- *Response to Noncompliance with the Effluent Limit for Chronic Toxicity:*
 - “If a toxicity test … determines a statistically significant difference in response between the CCEC and the control … the Permittee must begin additional compliance monitoring within one week of receiving the test results”.

The following is taken from the WDOE guidance (WQ-R-95-80, June 2016 revision):

- “To reduce WET limit violations due to statistically significance that is a Type I error (false positive), we lower the alpha for hypothesis testing when differences in test organisms response are small.”
- “Alpha will be lowered from 0.05 to 0.01 if a 10% difference in an acute test is significant or a 20% difference in a chronic test is significant.”

SUMMARY OF TEST RESULTS

Exhibit 1 provides a summary of the final test results.

EXHIBIT 1
Summary of Chronic Test Results

Species	NOEC (%)	LOEC (%)	IC₂₅ (%)	Was a statistically significant difference in response shown between control and the CCEC?
<i>P. promelas</i>	100	> 100	> 100	No

Note: acronyms are as defined below.

From the NPDES permit: “Compliance with the effluent limit for chronic toxicity means the results ... show no statistically significant difference in response between the control and the CCEC (8.4% effluent).”

More detailed information is provided in the Results and Discussion section.

ACRONYM DEFINITIONS (from EPA guidance):

NOEC = No Observed Effect Concentration: The highest test concentration that causes no observable adverse effects on the test organisms (i.e. no statistically significant reduction from the control).

LOEC = Low Observed Effect Concentration: The lowest test concentration that does cause an observable adverse effect on the test organisms (i.e. is statistically significant reduction from the control).

IC₂₅ = Inhibition Concentration (25%): A point estimate of the test concentration that would cause a 25 percent reduction of a non-quantal biological measurement (i.e. growth, reproduction, etc.) for the test population.

SAMPLE INFORMATION

Exhibit 2 provides a summary of the sample conditions as received.

EXHIBIT 2 **Sample Conditions on Receipt**

Sample ID		Final Effluent		
ET-C SDG + suffix		B4392		
		-01	-02	-03
Collection	- Date and Time	07/08/2019 10:00	07/10/2019 09:34	07/12/2019 09:30
Receipt	- Date and Time	07/09/2019 11:10	07/11/2019 10:30	07/13/2019 10:05
Temperature	(°C)	0.2	1.2	0.8
Dissolved Oxygen	(mg/L)	9.9	10.0	9.9
pH		7.4	7.3	7.0
Conductivity	(µS/cm)	820	863	885
Total Residual Chlorine	(mg/L)	0.02	< 0.02	0.03
Ammonia	(mg/L as NH ₃ -N)	0.18	0.22	0.13
Total Hardness	(mg/L as CaCO ₃)	105	148	145
Total Alkalinity	(mg/L as CaCO ₃)	70	78	65

Water quality measurements during testing remained within test design limits as prescribed by EPA and WDOE, except as noted with the individual test results. (see the Results and Discussion section)

METHODS AND MATERIALS

TEST METHODS

The chronic test methods were performed according to: *Short-Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Freshwater Organisms*, Fourth Edition, (EPA 2002), EPA-821-R-02-013.

Additional guidance was provided by:

- *Whole Effluent Toxicity Testing Guidance and Test Review Criteria*, Washington State Department of Ecology (revised June 2016) Pub# WQ-R-95-80.
- *Method Guidance and Recommendations for Whole Effluent Toxicity (WET) Testing* (40 CFR Part 136), (EPA August 2000), EPA 821-B-00-004.

DEVIATIONS FROM PROTOCOLS

Deviations from required procedures in the test methods:

- None noted.

Deviations from recommended procedures in the test methods:

- None noted.

TEST DESIGN

The following summarizes the conditions used for both overall testing and the specifics for each test (observations and notations can be found on the datasheets in Appendix A):

Overall Test Design:

Chronic tests: 6.25, 8.40, 25.0, 56.5, and 100 percent sample + dilution water for the control.

Test Organism Conditions:

All organisms tested were fed and maintained during culturing, acclimation, and testing as prescribed by the EPA (2002).

The test organisms appeared vigorous and in good condition prior to testing.

P. promelas chronic test:

- Source: Aquatox Inc., Hot Springs, Arkansas
- Age: Less than 48 hours old and within a 24 hour age range
- Design: Four test vessels per concentration, ten organisms per vessel
- Test Solution Renewal: Daily

- Monitoring:
 - Daily: Survival
 - Daily: DO and pH in pre and post-renewal solutions, all concentrations
 - Daily: Temperature in pre-renewal solutions, all concentrations
 - With each new sample: Conductivity in post-renewal solutions, control and highest sample concentration
- Termination: 7 days after test initiation.
- Endpoints: Survival and Growth (average dry weight per organism added @ initiation)
- Acute Dual-Endpoint: 48 hour Survival (from the 2 day chronic exposure data)

DILUTION WATER

The dilution water used was the standard culture water used by ET-C:

- Reconstituted, moderately hard water (as per EPA protocol) with a total hardness of 75 to 105 mg/L as CaCO₃ and an alkalinity of 50 to 75 mg/L as CaCO₃.

SAMPLE COLLECTION AND STORAGE

Samples were collected by Jacobs - Spokane personnel. The samples were accepted as scheduled by ET-C. Chain of Custody and Sample Receipt Records are provided in Appendix C.

- All samples were received within the EPA recommended 0 to 6 °C range.
- All samples were initially used for test initiation or test solution renewal within the EPA recommended maximum holding time of 36 hours of sample collection.
- All subsequent uses of a sample occurred within the EPA recommended maximum holding time of 72 hours past the time of initial use of that sample.
- Following receipt, the samples were stored in the dark at 0 to 6 °C until test solutions were prepared and tested.

SAMPLE PREPARATION

Samples used during these tests were:

- Temperature adjusted prior to test initiation and each daily renewal.

DATA ANALYSIS

The statistical analyses performed for the chronic test were those outlined in *Short-Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Freshwater Organisms*, USEPA Office of Water, Fourth Edition (EPA 2002), EPA-821-R-02-013, CETIS.

- The specific statistical analysis and CETIS version used for each endpoint evaluation is listed with the statistical outputs included with each test in Appendix A.
- If any additional analysis methods were also used, an explanation of the rationale and reference to the source method is included with the presentation of those results below.

RESULTS AND DISCUSSION

The raw data sheets for all tests are presented in Appendix A.

CHRONIC BIOASSAY

Table 1 summarizes the survival and reproduction data for the *P. promelas* chronic test.

Table 1 Summary of Chronic Results <i>P. promelas</i>		
Sample Concentration (%)	Percent Survival	Mean Dry Weight per Organism Added (mg)
Control	97.5	0.665
6.25	100	0.746
8.40	97.5	0.657
25.0	100	0.696
56.5	100	0.764
100	100	0.805

Statistical analysis in accordance with the EPA protocol results in:

- NOEC = 100 %
- LOEC > 100 %
- IC₂₅ > 100 %

From the NPDES permit: “Compliance with the effluent limit for chronic toxicity means the results ... show no statistically significant difference in response between the control and the CCEC (8.4% effluent).”

- A statistically significant difference between control and CCEC was not shown.

The dissolved oxygen levels in the chronic tests remained above 4.0 mg/L. Test temperatures remained at 25±1 °C.

The *C. dubia* test meets Test Acceptability Criteria (TAC) for a minimum 80 percent control survival and a minimum 15 young produced per surviving control adult. Unless referenced above, the tests proceeded without any noted deviations or interruptions that could have affected test results. The testing should be considered “valid”.

REFERENCE TOXICANT TESTS

Reference toxicant (reftox) testing is performed to document both initial and ongoing laboratory performance of the test method(s). While the health of the test organisms is primarily evaluated by the performance of the laboratory control, reftox test results also may be used to assess the health and sensitivity of the test organisms. Reftox test results within their respective cumulative summary (Cusum) chart limits are indicative of consistent laboratory performance and normal test organism sensitivity.

The results of the reftox tests indicate that the test organisms were within their respective cusum chart limits based on EPA guidelines. This demonstrates ongoing laboratory proficiency of the test methods and suggests normal test organism sensitivity in the associated client testing.

The *P. promelas* reftox test was conducted using potassium chloride. The data sheets for the reference toxicant tests are provided in Appendix B.

Table 2 summarizes the reference toxicant test results and Cusum chart limits.

Table 2 Chronic Reference Toxicant Tests (g/L)		
Species	IC₂₅	Cusum Chart Limits
<i>P. promelas</i> (survival)	0.61	0.56 to 0.67
<i>P. promelas</i> (growth)	0.58	0.45 to 0.73

✓ Indicates one organism inadvertently poured off during solution renewal, replaced into container.

"M" = organism missing, start count reduced. "Inj" = organism injured, remove from stats.

"F" = fungus noted on dead organisms.

Pre = Pre-renewal solutions. Post = Post-renewal solutions.

Day 0 Temperatures = Post-renewals

Therm ID# = Thermometer ID used for all measurements that day.

23.8

= Temp. out of recommended range

REFTOX - FHM chronic (KCl) SL1282-1118 Doc Control ID: ASL1282-1118

**REFERENCE TOXICANT CUMULATIVE SUMMARY (CUSUM)
CHART**

Pimephales promelas - Chronic (EPA Test Method 1000.0)

POTASSIUM CHLORIDE (g/L)

Endpoint: Chronic Survival

Stats Method: Linear Interpolation

Test Conditions: Recon MH, 25 oC

From EPA 833-R-00-003:

10th Quartile CV (control limit) = 0.03

25th Quartile CV (warning limit) = 0.11

75th Quartile CV (warning limit) = 0.32

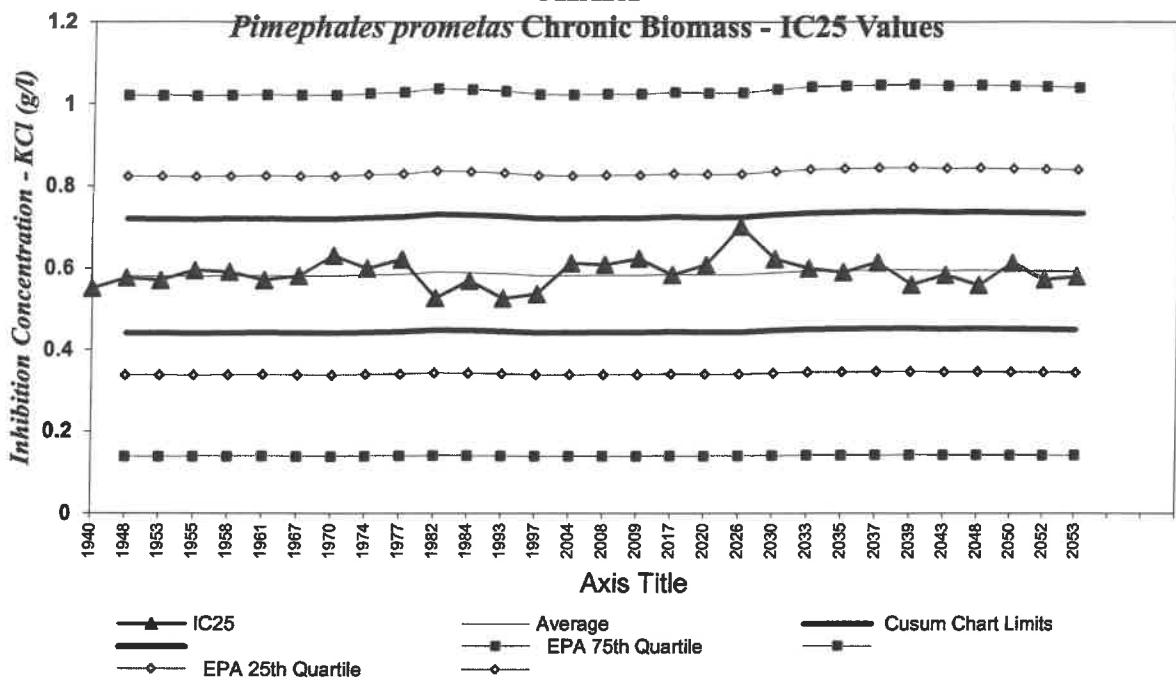

90th Quartile CV (control limit) = 0.52

Intralab CV is compared to EPA Warning limits (25th and 75th CV's) and Control limits (10th and 90th CV's).

If lab CV is outside EPA Control limits, the EPA Control limits are used to set Cusum chart limits.
