Samples were received under appropriate Chain of Custody procedures.

Containers were properly preserved and stored in accordance with the applicable method requirements.

HOLDING TIMES

All analyses were performed within the required holding times.

METHODS

The samples were analyzed by the following methods:

EPA Method 170.1 for Field Temperature
EPA Method 410.4 Rev 2.0 for Total Chemical Oxygen Demand
Standard Methods 2540D for Total Suspended Solids
Standard Methods 4500-H+ B for Field pH
Standard Methods 5210B for Biochemical Oxygen Demand (BOD)

MINIMUM REPORTING LIMITS

All analytes are reported to the Practical Quantitation Limit (PQL) which is below or no greater than the Minimum Project Reporting Limit.

BLANKS

Blanks were analyzed at the required frequencies of the methods. Analytes were not detected in the blanks, sample concentrations were greater than 10 times the blank values, or the analytes detected in the blanks were not detected in associated samples.

LABORATORY CONTROL SAMPLES

Laboratory Control Samples were analyzed with these samples. The recoveries were within the laboratory limits.

DUPLICATE SAMPLE ANALYSIS

Duplicate analysis was performed with these samples. Relative percent differences were within the laboratory limits.

MATRIX SPIKE AND MATRIX SPIKE DUPLICATE ANALYSIS

LABORATORY DATA ISSUE

Darling water sample 2202058-01 was analyzed for BOD in batch BFC0013 after 5 days of incubation on 07-March-2022. Standard Method 5210B requires all BOD test bottles (samples, quality assurance and the seed correction analysis) to register a minimum 2.0mg/L Dissolved Oxygen (DO) drop after 5 days, and the final DO concentration must be greater than 1.0mg/L. The seed correction analysis bottle did not achieve the 2.0mg/L DO drop, therefore sample 2202058-01 BOD results is reported as estimated (J).

DATA AVAILABILITY

All data associated with the samples referenced in this report are archived at the Environmental Services Laboratory and are available upon request.

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan and project QAPP.

Notes and Definitions

- U Analyte Not Detected at or above the associated value
- J The analyte was positively identified. The associated value is an estimate. For BOD Analysis: The sample dilutions set-up for the BOD analysis did not meet the oxygen depletion criteria of at least 2 mg/l dissolved oxygen depletion. Therefore the reported BOD result is estimated biased high
- UJ Analyte Not Detected at or above the associated estimated value
- ND Analyte NOT DETECTED at or above the reporting limit
- E Analyte was determined above the upper quantitation range of the method. The associated value is an estimate.
- NJ There is evidence the analyte is present. The associated value is an estimate.
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

- H The sample dilutions set up for the BOD analysis failed to meet the criteria of a residual dissolved oxygen of at least 1 mg/l. Therefore actual concentration is likely greater than the reported result.
