Subject: SMAP - Receiving Water Assessment

Hi Brienn,

I have follow-up questions on the City's *Receiving water assessment*.

Are one or more basins in your *SMAP Analysis Table v1.3* expected to have a relatively low Stormwater management influence?

If yes, which basins?

Which receiving waters in this Table will be included in your receiving water prioritization process?

S5.C.1.d(i) of your Permit says:

The watershed inventory shall be submitted as a table with each receiving water name, its total watershed area, the percent of the total watershed area that is in the Permittee's jurisdiction, and the findings of the stormwater management influence assessment for each basin. Indicate which receiving waters will be included in the S5.C.1.d.ii prioritization process...

(a) Identify which basins are expected to have a relatively low Stormwater Management Influence for SMAP. See the guidance document for definition and description of this assessment.

Let me know if you have a question about this.

Thanks,

Angela Vincent
