Section C: Summary of Findings/Comments

BACKGROUND

This site is covered under the Construction Stormwater General Permit. The purpose of this inspection is to conduct a compliance inspection and to provide technical assistance as appropriate. Ecology received a report in our Environmental Reporting Tracking System (ERTS #719903) from a concerned citizen. The report indicates there was visible turbid water discharge on a nearby creek (Mosher Creek).

INSPECTION

Upon arrival Marty Jacobson and I met with superintendent Dean Fisk. The site has been completed and the COSTCO store and associated parking lot is in operation. The permit is ready for termination. (I received a NOT application later on the day of the inspection from Kerry Soileau, which I sent in turn to our fiscal unit for processing).

We proceeded to the retention pond in the SW corner of the site, see phot log. There was no precipitation on the day of the inspection. According to Dean, during the the week of December 24th and December 30th, there was a slide on the north side of the retention stormwater pond. Dean was not present at the site at the time of the slide, but was informed upon his return. We did not find any evidence linking the slide to a discharge from the pond.

According to Dean, the pond receives water from across the street. The underground conveyance system collects stormwater from the west side of the site, including the parking lot, and water from the underground stormwater vaults.

The pond has an overflow, which leads to a stormwater management system that collects and disperdses stormwater. (See photo log). We did not find any paths where the stormwater would discharge to Mosher Creek.

Section D: Compliance

Ecology did not find evidence that would link the discharge referenced in the ERTS to the Costco site.

The site has been stabilized and temporary BMPs have been removed.

E-SIGNATURE DUE TO COVID-19
