## Explanation of Qualifiers

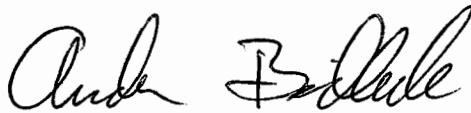

Note: study-specific narratives within the body of the report are denoted, if necessary, with the superscript letters **a - d**, and associated footnotes. Other qualifications and definitions are defined below.

- S - Sample temperature upon receipt was outside the range recommended by USEPA (2002), (i.e., 0 to 6°C or ambient if collected and used on the same day).
- I - Ice was present in the sample upon receipt.
- N1 - Sample was not used for testing.
- N2 - Liquid from container with ice was not used for testing.
- F - Sample was filtered to remove indigenous organisms prior to use.
- HT - Sample hold time (normally 36 hours) was exceeded.
- HA - Hardness and alkalinity concentrations are presented as CaCO<sub>3</sub>.
- G - TRC = Total Residual Chlorine
- T1 - Temperatures measured in some of the old test solutions were outside the recommended test temperature range but the allowed 3°C differential was not exceeded.
- T2 - Temperatures measured in some of the old test solutions were outside the recommended test temperature range and the allowed 3°C differential was exceeded.
- T3 - Temperatures measured in test solutions.
- T4 - Continuous temperatures measured in the environmental chamber or water bath.
- X1 - Mean young per original female. If any 4<sup>th</sup> or higher broods were produced, they were excluded from calculation of mean young per female and statistical analysis of reproduction.
- X2 - One or more organisms in this treatment were lost or not found in the test chamber and were excluded from analysis, as the loss was attributed to technician error. See laboratory data sheets for additional detail, as appropriate.
- X3 - One or more male *C. dubia* were found in this treatment and were included in analysis of survival but excluded from analysis of reproduction. See laboratory data sheets for additional detail, as appropriate.
- X4 - One or more fish were alive at test termination but were lost during the drying/weighing process. These fish were included in analysis of survival but excluded from analysis of growth. See laboratory data sheets for additional detail, as appropriate.
- O1 - Dissolved oxygen concentrations were ≤ 4.0 mg/L in one or more treatments during the test; aeration was initiated in all test chambers. See laboratory data sheets for additional detail, as appropriate.
- O2 - Dissolved oxygen concentrations ≤ 4.0 mg/L were observed in one or more treatments only at test termination.
- O3 - Dissolved oxygen concentrations were ≤ 4.0 mg/L in one or more treatments during the test but aeration was not possible. See laboratory data sheets for additional detail, as appropriate.
- W1 - Weight per original number of organisms introduced at test initiation.
- W2 - Weight per surviving number of organisms at test termination.
- V1 - Value was statistically ( $\alpha=0.05$  or 0.01, as appropriate) reduced relative to the control, but was considered a Type I error (anomalous false positive), and was disregarded. The NOEC was interpreted accordingly.
- V2 - Value was not statistically ( $\alpha=0.05$  or 0.01, as appropriate) less than the control, but was considered a Type II error (anomalous false negative). The NOEC was interpreted accordingly.
- P1 - PMSD was below the lower bound indicated by USEPA (2002). A statistically significant reduction for a treatment was disregarded if the RPD for that treatment was less than the lower bound.
- P2 - PMSD was above the upper bound indicated by USEPA (2002), and statistically significant reductions in organism performance were detected.
- P3 - PMSD was above the upper bound indicated by USEPA (2002), and no statistically significant reductions in organism performance were detected.
- R - Monthly reference toxicant test endpoint for this species was outside the 95% control limits for the 20 most recent endpoints.

---

## POWER STANDARDS CALCULATION FOR CHRONIC TESTS

Project Number: 14001-056-243

Test Species: Americamysis bahia

Test Period: March 9, 2023 to March 16, 2023

CCEC	Mysid average weight / organism (mg)						
	Rep A	Rep B	Rep C	Rep D	Rep E	Rep F	Rep G
0.8% effluent	0.294	0.275	0.298	0.246	0.256	0.320	0.322
Control	Rep A	Rep B	Rep C	Rep D	Rep E	Rep F	Rep G
Lab water	0.318	0.260	0.260	0.273	0.274	0.227	0.323

1.  $\frac{0.281}{0.285} (B) - \frac{0.285}{(A)} = \frac{-0.004}{-0.004} (C)$
2.  $\frac{-0.004}{-0.004} (C) \div \frac{0.281}{0.281} (B) = \frac{-0.0142}{-1.42} \times 100 = \frac{-1.42}{-1.42} (D)$
3. If (D) is  $\leq$  39 percent, then this test has met the power standard.
4. This test  / DOES NOT meet the power standard.

Note: WET tests that fail WET limits do not have to meet power standards.
