City of Pasco Annual Pretreatment Report

January 1, 2023 – December 31, 2023

This report was prepared in March 2024 to document the activity of the City of Pasco's Industrial Pretreatment Program during the 2023 calendar year as required by State Waste Discharge permit ST0005369 (section S6.A.5 *Pretreatment Report*) and Amended Administrative Order Docket No. 11458. The contents of this report are intended to meet the reporting requirements of each POTW's respective permit in addition to the requirements at 40 CFR 403.12(h)(i)(1)-(5).

1.0 Introduction: POTW Overview

The City of Pasco owns and operates two wastewater treatment facilities. The Municipal Wastewater Treatment Plant (WWTP) is a Class III facility (WAC 173-230-140; *Classification of Wastewater Treatment Plants*) that has been built in stages over the past 60 years. After treatment, the effluent from the plant is discharged to the backwater of the McNary Dam of the Columbia River in accordance with NPDES requirements under permit No. WA-004496-2. The Municipal WWTP accepts and treats domestic wastewater from commercial and residential sources and currently accepts wastewater from one major industrial source (Easterday Farms) permitted by the City as Significant Industrial Users. During the calendar year of 2022 the City completed the infrastructure needed to convey Grimmway Farms' effluent to the Process Water Reuse Facility (PWRF).

The Pasco Process Water Reuse Facility (State Waste Discharge Permit No. ST0005369) accepts wastewater from several food processing facilities for treatment via land application to 1,938 acres of City-owned farm fields (figure 1). The facility is designed to receive industrial food processing effluent discharges and does not accept domestic waste. The facility was evaluated for improvements and expansion as part of a capital facilities plan project, the Engineering Report for the facility upgrades were submitted to the Washington Department of Ecology during the 2nd quarter of 2023. Currently, improvement Phases 2 and 3 are being constructed. Phase 2 will add an additional 329 million gallons of winter storage capacity, and Phase 3 will add need treatment that includes, grid removal, a low rate anaerobic digester, and RAB system to remove Total Nitrogen.

The City of Pasco's Industrial Pretreatment Program was delegated to the City by the Washington State Department of Ecology (Ecology) in 2015. The program works to prevent pass through and interference at both treatment plants by enforcing applicable Federal, State, and local regulations of wastewater discharges from commercial and industrial facilities.

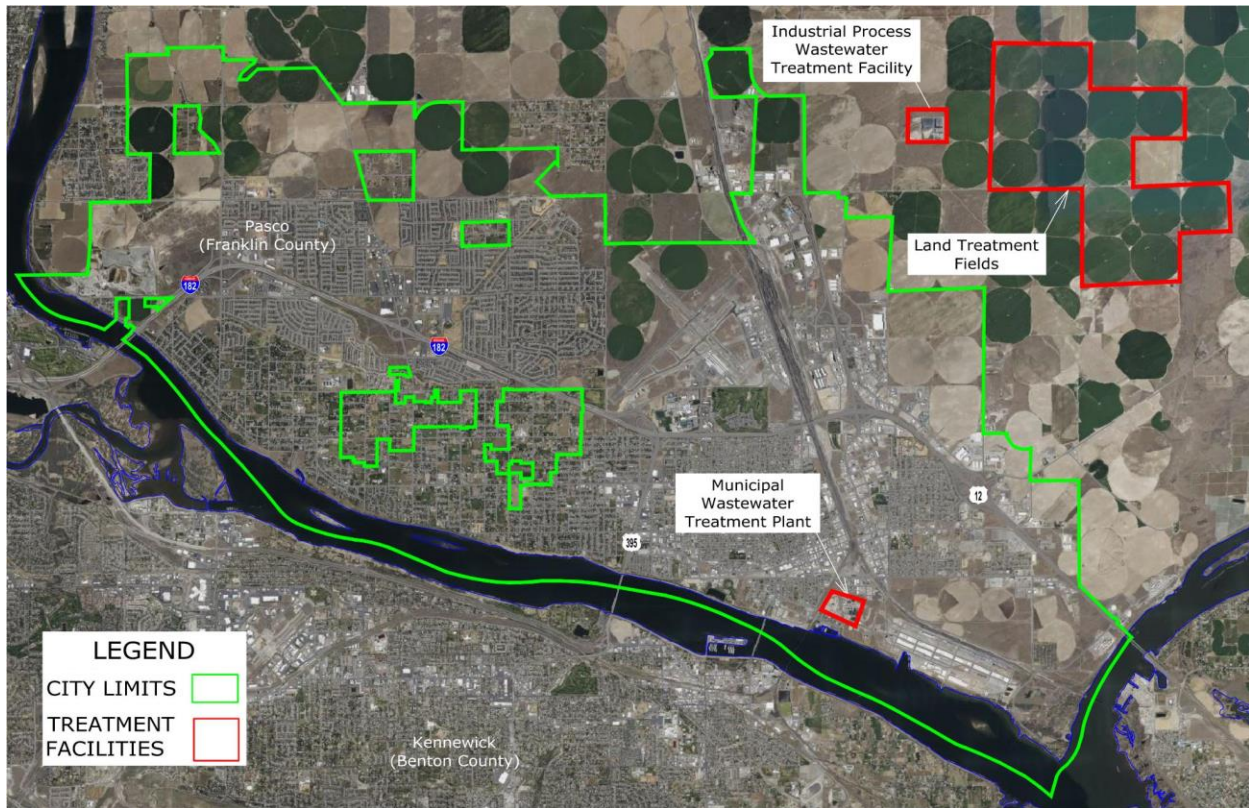

Figure 1: Location of the Municipal WWTP, Industrial Wastewater Treatment Facility, and land application site.

2.0 Operation Annual Summary

The City continued to carry out critical and required functions of its Pretreatment program in 2023, while also focusing on maintaining execution of existing procedures. This section will focus on key highlights of the Program's activity during 2023.

2.1 Pretreatment Program Activity Highlights

- Reviews and updates of the City's Industrial Wastewater Discharge Permits continues
- Completed one permit modification.
- 1 permit renewal was issued.
- The city continues to conduct the collection of all compliance samples for all industrial users that convey their effluent to the Process Water Reuse Facility.

2.2 Interference, Upset, or Pass Through

During the period between January 1, 2023, and December 1, 2023, no pass through¹, interference², occurred at the Municipal WWTP, no permit limit violations were reported to the Department of Ecology in the Discharge Monitoring Report during 2023.

During the year of 2023 the City's PWRF had 15 permit violations for Monitoring Well exceedances.

2.3 Substantial Modifications to the Pretreatment Program

The City continued to run an increased level of sampling during 2023. The data collected is being utilized to aid in the evaluation for future facility expansions and upgrades.

2.4 Upcoming Program Changes

No substantial modifications, as defined in 40 CFR 403.18(b), occurred in 2023. Depending on permit approvals and construction schedules, PWRF will experience operating modifications in 2024.

2.5 Program Resources

- **Staffing:** The City's pretreatment program is staffed by a full time Environmental Compliance Coordinator and a Pre-treatment Technician conducting sampling, monitoring, and communicating with all the industries that participate in the City's pre-treatment program. No changes to the staff are planned for 2024.
- **Funding:** Revenue is generated for the Pretreatment program through discharge permit fees based on the WAC 173-224 fee schedule. In 2023, the city invoiced seven industrial users for permit fees based on their permitted daily maximum flow volume (table 1). Baker Produce is in the process of receiving a discharge permit in 2024 and will also be required to pay their annual discharge fee.

¹ *Pass through* is defined as a discharge that exits the POTW into waters of the United States in quantities or concentrations that, alone or in conjunction with a discharge or discharges from other sources, is a cause of a violation of any requirements of the POTW's NPDES permit (including an increase in the magnitude or duration of a violation). [40 CFR 403.3(p)]

² *Interference* is defined as a discharge that, alone or in conjunction with a discharge or discharges from other sources, BOTH (1) inhibits or disrupts the POTW, its treatment or operations, or its sludge processes, use, or disposal; AND (2) therefore is a cause of a violation of any requirement of the POTW's NPDES permit (including an increase in the magnitude or duration of a violation) [paraphrased from 40 CFR 403.3(k)]

Table 1: 2021 Program past revenue and projected revenue for 2024

Permitted User	2022	2023	2024
Oregon Potato d/b/a Freeze Pack	\$19,633	\$19,633	\$19,633
Reser's Fine Foods	\$25,819	\$25,819	\$25,819
Twin City Foods	\$48,374	\$48,374	\$48,374
Grimmway Farms	\$48,374	\$48,374	\$48,374
Easterday Farms	\$14,036	\$14,036	\$14,036
Pasco Processing, LLC	\$53,993	\$53,993	\$53,993
Simplot RDO/Simplot Frozen Vegetables	\$48,374	\$48,374	\$48,374
Baker Produce	-	-	\$14,036
Total	\$258,603	\$258,603	\$272,639

- **Equipment:** The Pretreatment Program maintains adequate equipment to perform monitoring, sampling, and administrative tasks necessary to track industrial user compliance. Funds are budgeted each year for pretreatment equipment and supplies to ensure tools are available to carry out essential program tasks.

3.0 Industrial User Survey

In 2023, the industrial user inventory was updated to identify and characterize all potential contributors to the City's wastewater collection and treatment system. This information is used to identify non-domestic dischargers that may be subject to Pretreatment program permitting or Categorical Pretreatment Standards.

Every business is assigned a preliminary classification as either a potential Significant Industrial User (SIU), Minor Industrial User (MIU), or Insignificant Industrial User (IIU). IIU's are the lowest priority and are designated once it is determined that the site is either not connected to the City's sewer system, or there is no reasonable expectation for that facility to discharge non-domestic wastewater (banks, professional offices, etc.). Classifications were updated from previous years where necessary.

New businesses that were not eliminated from consideration were flagged for follow-up and will be mailed an industrial user survey to collect additional information on their production processes and wastewater. High-priority businesses will be surveyed first. The City is in the process of updating its preliminary industrial user survey form and plans to create additional forms targeted to specific types of facilities to improve the quality of data collected. Once completed survey forms are returned to the City, they will be reviewed by Pretreatment staff and the industry's classification will be updated if necessary. SIUs will be required to submit a discharge permit application and obtain permit coverage.

At the end of 2023 every industrial User Survey received through 2023 was processed. These surveys aid the update of the master list. The updated industrial user inventory can be found in Appendix D.

4.0 Reviews of Engineering Reports and O&M Manuals

The city is in the process of renewing the SIU's discharge permits and ensuring the most accurate data is available. Annually the industrial users are required to review and certify their O&M manuals. The city has started the process to require Baker Produce to complete a permit application and Engineering report as they begin the process of becoming a permitted industrial user.

5.0 Discharge Permits

PWRF is in the process to build a new facility to become operational at the end of the 4th quarter of 2024. All IUs will be issued new permits, each permit renewal or modification will be reviewed by Ecology before being sent to public comment.

6.0 Industrial User Monitoring

The city inspected all permitted facilities and met industrial user monitoring permit requirements in 2023.

6.1 Discharge Sampling

Permitted industrial users continued to perform self-monitoring of permit required limits and submitted their results monthly via Discharge Monitoring Reports to the City.

The city continues to conduct all the compliance sampling events for all the Permitted facilities that discharge to PWRF. The discharges to the municipal plant required closer inspection of BOD and TSS pretreatment activities.

6.2 Facility Inspections and Monitoring

Table 3 below shows a summary of the inspection events conducted by the city in 2023 as well as the planned events in 2024.

Table 2: Summary of City monitoring of Significant Industrial Users in 2022/2023

SIU	2023 Inspection Date(s)	Planned Frequency of Upcoming (2024) Monitoring
Pasco Processing LLC	October 16, 2023	Quarterly sampling and monthly sampling by the City Annual inspection
Twin City Foods	October 16, 2023	Quarterly sampling and monthly sampling by the City Annual inspection
Reser's Fine Foods	October 20, 2023	Quarterly sampling and monthly sampling by the City Annual inspection
Freeze Pack	August 25, 2023	Quarterly sampling and monthly sampling by the City Annual inspection
Grimmway Farms	October 23, 2023	Quarterly sampling and monthly sampling by the City Annual inspection
Easterday Farms	October 23, 2023	Quarterly sampling by the City and monthly sampling by IU Annual inspection
Simplot RDO	October 20, 2023	Quarterly sampling and monthly sampling by the City Annual inspection
Baker Produce	N/A	Quarterly sampling and monthly sampling by the City Annual inspection

7.0 Permit Violations and Enforcement Actions

The city routinely monitors compliance data to detect violations of permitted limits or identify areas of concern. Discharge monitoring reports are submitted monthly to the city by the permitted industrial users. The reports are reviewed as they are received and reported values are compared to permitted and local limits (where applicable). Industrial user samples, taken by City staff, are also compared to permitted and local limits. The city relies on its Enforcement Response Plan to make timely and appropriate progressive actions when violations are detected, all violation are noted by sending a Notice of Violation (NOV) Letter to the IU. Table 4 summarizes the enforcement actions that occurred during 2023 in response to permit violations.

Table 3: Summary of City enforcement actions in response to permit violations in 2022

SIU	Violation	Enforcement Action	Date of Enforcement
Freeze Pack	Exceeded BOD limit	NOV, Violation Fee (\$2000)	September 5, 2023
Reser's Fine Foods	Exceeded BOD limit	NOV, No Violation Fee	November 7, 2023

8.0 Summary of POTW Pretreatment Monitoring

In 2023, the City continued to perform annual and quarterly testing of influent, effluent, and sludge at both the Municipal and Industrial wastewater treatment facilities. This sampling was performed in order to monitor for the toxic pollutants identified in Tables II and III of Appendix D of 40 CFR Part 122. The following section will provide a summary of the pollutants from 40 CFR Part 122 that were detected as part of this sampling. Full analytical results are available in Appendix A.

8.1 Municipal WWTP Annual Testing Results

Annual testing as described in 40 CFR Part 122, Appendix D, TABLE II— ORGANIC TOXIC POLLUTANTS IN EACH OF FOUR FRACTIONS IN ANALYSIS BY GAS CHROMATOGRAPHY/MASS SPECTROSCOPY (GS/MS). No pollutants were detected at the Municipal WWTP.

8.2 Municipal WWTP Quarterly Testing Results

(Full results of 40 CFR Part 122 Table III quarterly testing are included in “Appendix A” of this report)

8.3 Process Water Reuse Facility Quarterly Testing Results

(Full results of 40 CFR Part 122 Table III quarterly testing ARE INCLUDED IN “Appendix A” of this report)

9.0 Local Limits

Local limits are based on site-specific conditions to protect POTW operations and to ensure that effluent is compliant with State and Federal requirements. The City of Pasco first developed technically based local limits in 2014 and those limits were adopted into the Pasco Municipal Code (Table 5). At this time, local limits for toxic metals and most conventional pollutants have only been developed for the municipal WWTP. Limits for the industrial facility are under review and will align with future system improvements. No additional local limits were established or revised in 2023.

Table 4: Current Local Limits adopted in the Pasco Municipal Code

PMC 13.90.090 Local Limits (Municipal WWTP)			
Parameter	Limit	Parameter	Limit
Chromium, total	5.000 mg/L	TSS	300 mg/L
Copper, total	1.370 mg/L	Soluble BOD5	150 mg/L
Lead, total	0.423 mg/L	BOD5	300 mg/L
Mercury, total	0.030 mg/L	pH min	6.0 SU
Molybdenum, total	0.047 mg/L	pH max	9.0 SU
Nickel, total	0.222 mg/L		
Zinc, total	0.753 mg/L		
PMC 13.90.100 Local Limits (Industrial PWRP)			
Parameter	Limit		
pH min	6.0 SU		
pH max	12.0 SU		

9.1 Review of Local Limits Using MAHL Comparison

To review the effectiveness of the current local limits, actual pollutant loadings were compared with the original Maximum Allowable Headworks Loading (MAHL) for each pollutant of concern. The MAHL was calculated as part of the original local limits development and represents the maximum daily load in pounds that can be received at the POTW headworks before causing pass through or interference. Because sampling was performed on a quarterly basis for the pollutants with an associated local limit, the assessment was performed for each quarter. The maximum daily flow volume for each quarter was used in the calculations to provide the worst-case scenario. See Appendix C for local limits review data.

For the majority of pollutants, current loadings for each quarter of 2023 were below the original MAHL calculated for each pollutant of concern and did not exceed the EPA recommended threshold of 60% of the MAHL for reevaluation. This comparison of current loadings indicates that the local limits for these pollutants are effective in preventing pass through or interference at the municipal WWTP. However, the calculated maximum daily loadings for zinc were found to be between 76-126% of the MAHL for four quarters in 2022. Zinc loadings remained consistent throughout the year. While

the observed values could be the result of elevated domestic contributions, a more in-depth investigation into the cause of the increased zinc loading will need to be performed to confirm if this is the case, or if the MAHLs will need to be recalculated based on changing operating conditions.
