Re: Ecology Agreed Order 20840; 2024 Chronic Bioassay Whole Effluent Toxicity (WET) Testing

Dear Mr. Nguyen:

Attached please find the above referenced reports. These reports describes the results of the bp Cherry Point Refinery's 2024 WET testing as outlined in Ecology's Agreed Order 20840.

Included in this submission are results from two sampling events; one which commenced on January 30th, 2024, and the second which commenced on February 27th, 2024. Per the Agreed Order, both studies were performed using the species *Americamysis bahia*. A series of five effluent concentrations, including the adjusted chronic critical effluent concentration (CCEC) of 2.4% and the adjusted acute critical effluent concentration (ACEC) of 10.8% was utilized.

No individual test result shows toxicity at the adjusted CCEC or the adjusted ACEC, as indicated by the report data.

If you have any questions regarding the report, please feel free to contact me at (360) 296-4283 or Rikki.Larson@bp.com

Sincerely,

A handwritten signature in blue ink that reads "Rikki Larson".
