**Subject: January 2025 Bioassay Test**

Dear Luke,

Enclosed are the results for the acute fathead minnow toxicity test conducted with effluent collected in January 2025 at the City of Bremerton WWTP. Test procedures followed EPA and Washington Department of Ecology guidelines.

There were no statistically significant differences between any of the concentrations tested and the control. The undiluted effluent resulted in 92.5 percent survival.

Please don't hesitate to reach out if you have any questions or if I can be of further assistance.

Sincerely,

Barbara Orelo  
Project Manager
