

Hytec Littlerock Site

Olympia, WA

Public Comment Requested **Proposed Agreed Order for Remedial Investigation & Feasibility Study of Soil and Groundwater Contamination**

The Washington Department of Ecology (Ecology) is proposing to enter into an agreed order (agreement) with Chauncey & Elizabeth Lufkin and Hytec Inc. The agreed order describes how the Lufkins and Hytec Inc. will conduct an investigation and feasibility study of the Hytec Littlerock property, a former disposal pit and landfill for fiberglass manufacturing waste.

The approximate 44-acre Hytec Littlerock site is zoned single family residential. The site is at 13434 S.W. Halo Kuntux Lane, Olympia, near the town of Littlerock.

Please see the right hand column for details on where you can view the proposed agreement, a public participation plan, and other documents; and where to send your comments.

Deadline for comments is December 30, 2005.

Background

Based on a site hazard assessment, Ecology has placed the site on the state's hazardous sites list. The site is ranked "four" on a scale of five, with one representing the highest

relative risk compared to other sites.

In 1990, Ecology contracted with Science Application International Corporation to study the property. The study looked at both soil and groundwater and found chemicals that may be harmful to human and environmental health.

Science Application International Corporation also did a magnetic survey of the property, and found there might be metal drums or metallic material buried on site. Scientists have also seen a few unburied drums on the property.

These results show that the site requires further study before cleanup of the site can occur.

Work to be done

The agreed order will require further study of the soil and groundwater contamination at the Hytec Littlerock site. The Lufkins and Hytec Inc. will also need to study options for cleaning up the site, and develop and carry out a cleanup plan. Please read the agreed order for more details.

November 2005

The public comment period is:

**November 28 through
December 30, 2005**

Please direct your questions and comments to:

What happens next?

Ecology will review public comment on the proposed agreed order and adjust the order, if appropriate. Once the order is final, remedial investigation work will begin. Ecology will ask for public comment on the preferred approach for cleaning up the site once the feasibility study is completed.

Ecology wants to hear from you!

Ecology welcomes your comments on the proposed agreed order. Please see the front page of this fact sheet for information on where you can view documents, and where to send your comments.

**Please submit your comments
November 28 through December
30, 2005.**
