

RG Haley Site

Engineering design report ready for public review

The Department of Ecology (Ecology) invites you to review the engineering design report for the RG Haley cleanup site (Site) on the Bellingham waterfront. The report represents 30% completion of design work and provides details, refining the cleanup action selected by Ecology in 2018.

Through a legal agreement with Ecology, the City of Bellingham (City) completed a pre-design investigation then prepared the engineering design report. Following public review, the City will use the report to develop construction plans and specifications.

A future legal agreement will require the City to implement the construction plans and specifications.

For more information, see reverse side →
