PUBLIC COMMENT PERIOD: 9/3/03 - 11/1/03

Ecology Proposes to Remove Site from Hazardous Sites List – Briggs Nursery Debris Field, 4407 Henderson Boulevard SE, Olympia, Washington - Thurston County.

Ecology proposes to remove from the Hazardous Sites List the Briggs Nursery Debris Field. Briggs Nursery Debris Field is a small part of the 120-acre Briggs Nursery, an active wholesale nursery. The 5-acre site had pesticide-contamination above cleanup standards in site soil and sediment. In August 2002, the site was ranked on the Hazardous Sites List as a 2 (1 being high priority relative to other statewide sites; 5 being low).

Site cleanup included investigating the extent of buried solid waste and pesticide-contaminated soil and sediment; excavating and disposing of buried solid waste; removing contaminated soil and sediment; preventing erosion and stormwater run-off; sampling soil and sediment to confirm that contamination has been removed. Removing the source of contamination effectively cleaning up the site.

Agreed Order for RI/FS Proposed, SEPA Early Scoping Notice

The Washington State Department of Ecology (Ecology) is providing an opportunity for the public to comment on the Agreed Order for a Remedial Investigation/Feasibility Study (RI/FS) of petroleum contaminated soil and groundwater at the Ken's Auto Wash site located at 1013 East 10th Avenue, Ellensburg, WA. Ecology would also like to provide the public an opportunity to participate in the SEPA (State Environmental Policy Act) early scoping process to help identify environmental issues that need to be evaluated at this site.

To determine the extent and degree of contamination remedial excavation activities were conducted at the site in an effort to remove petroleum contaminated soil (October/November 2000). A large volume of soil was excavated; however, residual contaminated soil contains high levels of petroleum hydrocarbons which continue to contaminate groundwater on and off site. Free petroleum product has been detected in one groundwater monitoring well onsite. Groundwater monitoring and soil sampling continues at this site.
