Buying or selling a wood burning device in Washington

What you need to know ...

ecology.wa.gov/woodstoves

Washington has strict laws about wood stoves and other wood burning devices. Not every wood burning device that is sold in other states meets Washington's requirements.

How are Washington's requirements different?

Washington has stricter wood burning device standards than EPA to better protect health. The smoke from wood stoves, fireplaces, and other wood burning devices is made up of fine particles. Fine particles cause or worsen significant health effects, including asthma attacks, lung and heart disease, and stroke.

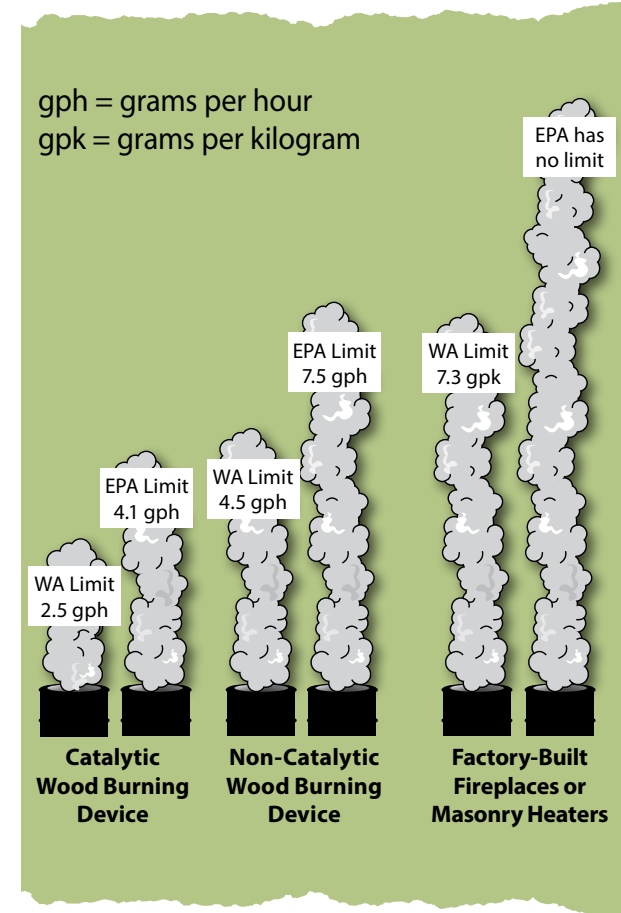

To be sold in Washington, all wood burning devices must meet both EPA's standards and Washington's stricter standards.

Wood burning devices include:

- Wood stoves.
- Pellet stoves.
- Wood furnaces.
- Manufactured fireplaces.
- Outdoor wood boilers.

What should you do before buying a wood burning device?

- Check that it is certified in Washington. Look at the lists of certified wood burning devices at: ecology.wa.gov/woodstoves or call Ecology at 360-407-6800.
- Get necessary permit(s) before installing a certified wood burning device.
- Follow local building codes.

Why is there a \$30 fee when purchasing a new wood burning device?

Each sale of a new wood burning device includes a \$30 fee added to the purchase price. State law requires the fee for the education and enforcement of wood burning device rules.

This fee does not apply to the purchase or sale of a used certified device.
