

Legal Agreement and Interim Action Plan Available for Comment

The Department of Ecology (Ecology) is entering into an agreed order (legal agreement) with the Port of Port Angeles (port) for cleanup of the K Ply site. The site, which is also known as PenPly or Peninsula Plywood, is located at 439 Marine Drive in Port Angeles.

You can review these documents at places listed to the right:

- **Agreed Order**—Requires the port to do an interim action (partial cleanup) and develop:
 - A remedial investigation and feasibility study, which describes the nature and extent of contamination. It will also evaluate options for final cleanup.
 - A draft cleanup action plan, which selects cleanup methods and describes how they meet Ecology's standards.
- **Interim Action Work Plan**—Describes proposed interim action (partial cleanup) tasks.
- **Public Participation Plan.**

Public Comment Invited

Ecology is accepting comments and questions from **October 18 - November 19, 2012**. The box to the right shows where you can review documents and how to submit comments.

Interim Action Work

During the interim action (see map on page 3), the port will:

- Tear down and remove mill buildings and structures, allowing them to complete site investigations.
- Use erosion and stormwater controls to keep contamination from moving into Port Angeles Harbor.
- Only remove contaminated soil if it is an immediate threat to human health or the environment.
- Take soil samples to confirm areas that need to be stabilized. Cover and stabilize contaminated soil to protect groundwater.
- Monitor groundwater and stormwater every three months.

What Happens Next?

The mill structures are fire and safety hazards, so the port plans to begin interim action work during the comment period. Then:

1. Ecology will review comments as we receive them and consider them in moving forward with the interim action and site work.

Comments Accepted

October 18—November 19, 2012

Send Comments and Questions to:

Connie Groven, Site Manager

2. At the end of the comment period, Ecology will respond to comments in a responsiveness summary. We will send this document to those who commented and post it online.
3. We will make changes to the agreed order and work plans if needed based on public comments.
4. After completing the interim action, the port will begin work on the remedial investigation, feasibility study, and draft cleanup plan.

Site Background

From 1941 - 2011, a plywood mill operated on the K Ply property. The port owns the property, which is now occupied by vacant former mill structures.

Past operations contaminated soil and groundwater. Known site contaminants include:

- Diesel-, oil-, and gasoline-range petroleum hydrocarbons.
- Benzene, ethylbenzene, toluene, and xylenes. These liquids are found in petroleum products and some manufacturing processes.
- Pentachlorophenol (PCP), a chemical used in some wood treating processes.

Rayonier operated a plywood mill on the K Ply property from 1971 - 1989. During that time, a hydraulic oil leak contaminated a part of the site.

Cleanup Background: In 2005, Ecology entered into an agreed order with the port for the Marine Trades Area site. At that time, it included the K Ply property. Since then, investigations showed that there are separate sources of contamination on the Marine Trades Area and K Ply properties.

As a result, Ecology is separating K Ply off as its own site and signing this new agreed order with the port. This fall, Ecology will also hold a comment period to amend the agreed order for the Marine Trades Area site.

Also, Rayonier is under an order to clean up the hydraulic oil contamination at the K Ply site.

Why Cleanup Matters

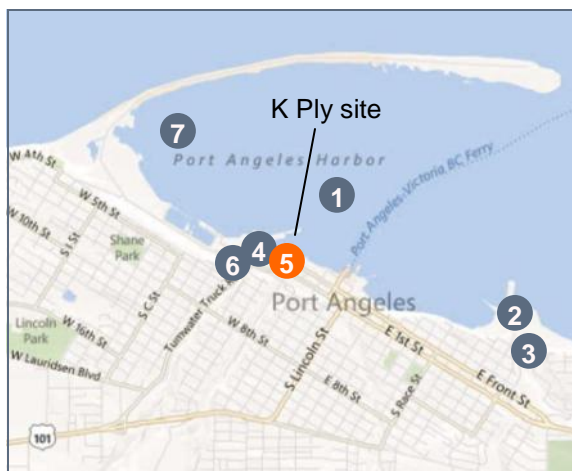

Decades of industrial, municipal, and naturally occurring pollution have damaged the quality and ecology of Puget Sound. In 2007, Governor Gregoire and the Washington State Legislature approved the Puget Sound Initiative to protect and restore the health of the Sound by 2020.

One of the Initiative's objectives is to clean up contaminated sites within one-half mile of Puget Sound. This cleanup will help reduce pollution and restore habitat and shorelines in Puget Sound.

Port Angeles Harbor Cleanups

Ecology is working to investigate and clean up contamination around Port Angeles Harbor. These efforts will help reduce the overall amount of toxins in the harbor and Strait of Juan de Fuca. For more information, visit
