

Floor Care Products

April 2009

For government purchasers

Publication No. 13-07-004

Responsible Purchasing Attributes

- \square Air quality
- \square Climate change
- ☑ Reduce toxic chemicals
- ☑ Water efficiency

Benefits of Purchasing

- ☑ Better indoor air quality.
- ☑ Better health for building occupants.
- Fewer toxic releases being rinsed down the drain.
- ☑ Reduced exposure to carcinogens and reproductive toxins.

Goal: To reduce or eliminate the use of toxic floor care products.

Floor care products include strippers, cleaners, and finishers. Floor finishers are designed to polish, protect, or enhance floor surfaces with a protective wax, polymer, or resin coating. They are made to be routinely stripped and reapplied. Strippers are used to remove floor finish polymers and waxes.

The U.S. Environmental Protection Agency (EPA) cites several sources for the health problems associated with cleaning chemicals. These include reproductive disorders, organ damage, permanent eye damage, asthma and other respiratory ailments, headaches, dizziness, and fatigue.

Chemicals used for cleaning either evaporate into the air, where they can be inhaled, or they are flushed down the drain and enter the environment.

Purchase flooring materials that do not require the use of these chemicals. If chemicals are required, purchase the least toxic products available.

Standards

Toxicological data is not available for many chemicals found in floor care products. Materials Safety Data Sheets used to certify cleaning products often do not list proprietary and inert ingredients. As a result, some standard-setting organizations in North America register products as "green" even when the toxicology of some of the ingredients is unknown.

Ecology recommends products certified by <u>Green Seal, EcoLogo</u>, and those recognized by EPA's <u>Safer Choice Program</u>. Safer Choice recognizes products and partners using safer chemical formulations.

Ecology also encourages agencies to promote the use of safer chemicals alternatives. Global standards such as Europe's Registration, Evaluation, and Authorization and Restriction of Chemical Substances (REACH), place more responsibility on manufacturers to manage the risks associated with their products.

How to Buy

Janitorial and Industrial Paper Contract #<u>00812</u>.

Leading the Way – Washington State Department of Ecology

The Washington State Department of Ecology (Ecology) developed a floor-care program that reduces chemical use.

Chemicals leave behind residuals on carpet fibers, which act like glue for dirt particles. Ecology steam-cleans carpet without the use of chemicals. Ecology dusts and wet-mops its concrete floors. Certified sealers and wax products are

used on the concrete and tiled surfaces only once or twice each year.

Product Performance

Safe floor care products perform as well and cost the same as those with toxins and are widely available. Custodians can test the safer products and select those that perform best.

Kate Davies, PhD of Antioch University,

published a study in 2005 of the economic costs associated with environmentally related diseases and disabilities in Washington State. The study looked at asthma among other diseases. Davies evaluated the fractions of the costs that can be attributed to environmental contaminants.

Davies found that when employers account for absenteeism, medical bills, worker's compensation, and insurance claims related to asthma, the costs were significant.

When choosing a vendor, evaluate the ability to train custodial personnel on:

- Safety issues.
- Proper mixing of chemicals.
- Proper cleaning techniques.
- ✓ Strategies to reduce chemical use and exposure.

Laws and Directives

| Executive Order 05-01 Establishing Sustainability and Efficiency Goals for State Operations | Requires sustainable practices by state agencies. This includes practices that do not sacrifice the needs of future generations. |
|---|--|
| Executive Order 02-03 | Directs state agencies to adopt measures to reduce the |
| Sustainable Practices | use of equipment, supplies, and other products that |
| by State Agencies | contain persistent toxic chemicals. |

End of Life

Non-environmentally preferred floor care products can release toxins into the air, water, and soil through waste water, improper use, and accidents. End of life (disposal) issues associated with toxic floor care products can be costly.

Some floor care products may be replaced with new high pressure sprayers or steam cleaners. Microfiber mops also reduce the need for chemicals. Water is, after all, the universal solvent.

Using steam cleaners, high-pressure sprayers, microfiber mops, and safe chemicals, if required, avoids most, if not all, end of life issues.
