## FORMAL CLEANUPS

Ecology oversees complex cleanup sites to ensure that your health and that of the environment are protected.

### BENTON COUNTY

Welchs Kennewick / J Lieb Foods Inc. Site

Facility Site ID# 89931898

CSID# 3710

10 E Bruneau Ave, Kennewick

**Public comment period: 5/11/15 – 6/10/15**

#### *Site Proposed for Removal from Hazardous Sites List*

Ecology proposes to remove the Welchs Kennewick / J Lieb Foods Inc. site from the Hazardous Sites List (HSL). The site was ranked a 5 on the HSL (a rank of "1" represents the highest level of risk compared to other sites; a rank of "5" represents the lowest). Ecology has determined that this site does not pose a threat to human health or the environment and recommends removing the site from the HSL.

Please direct questions and comments to site manager Matt Durkee.

### GRANT COUNTY

Wolfkill Feed & Fertilizer - Mattawa Site

Facility Site ID# 85996344

CSID# 1204

14250 Road 24 SW, Mattawa

**Public comment period: 5/14/15 – 6/15/15**

#### *Periodic Review Available for Public Review and Comment*

You are invited to review and comment on a document called a periodic review for the Wolfkill Feed & Fertilizer – Mattawa site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions after cleanup is considered complete, and to ensure continued protection of human

health and the environment. This is the second periodic review for this site.

The Wolfkill property is now owned by Tatoes, Inc. The site has an office building, storage building, maintenance shop and equipment storage building. Five above-ground storage tanks are located adjacent to the storage building. The tanks contained bulk liquid fertilizer.

Investigations at the site found endosulfan II, aldrin, and nitrate-nitrite in near surface soil at levels that exceeded state standards. Groundwater samples had atrazine, carbon tetrachloride and nitrate-nitrite at levels that exceeded state standards.

Contaminated soil was removed; however, nitrogen remained in soil at the base of the excavation at 5 feet below the ground surface. Groundwater monitoring wells were installed and samples taken from 2000 to 2002. Nitrate was the only contaminant that still exceeds state standards.

A restrictive/environmental covenant was placed on the property. The covenant prohibits contaminated groundwater for domestic use and limits any activities that might interfere with the integrity of the cleanup action that was implemented at the site or creates an exposure to humans or the environment.

A site visit was conducted on November 20, 2014, and Ecology determined the following based on the periodic review:

- The cleanup actions are continuing to protect human health and the environment.
- Soil cleanup levels have not been met at the site; however, under WAC 173-340-740(6) (f), the cleanup action is determined to comply with cleanup standards, since the long-term integrity of the containment system is ensured and the requirements for containment technologies have been met.
- The environmental covenant for the property is in place and will be effective in protecting public health and the environment from exposure to hazardous substances and protecting the integrity of the cleanup action.
- No additional remedial actions are needed.

Ecology will review all comments received during the comment period and make changes to the periodic review, if appropriate. If no significant changes are made, the review will be finalized. If significant changes are made, an additional public comment period will be held.

Please direct questions and comments to site manager Patti Carter.

Site Manager: **Patti Carter**

**Wolfkill Feed & Fertilizer - Royal City Site**  
5951 Highway 26 West, Royal City

**Facility Site ID# 91132746**

**CSID# 4587**

**Public comment period: 5/14/15 – 6/15/15**

*Periodic Review Available for Public Review and Comment*

You are invited to review and comment on a document called a periodic review for the Wolfkill Feed & Fertilizer – Royal City site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions after cleanup is considered complete, and to ensure

continued protection of human health and the environment. This is the second periodic review for this site.

The Wolfkill Royal City property is now owned by Cenex Harvest States (CHS) and is used for storing, mixing and distributing herbicides and pesticides. The site has an office building, a large storage building, two small wood storage buildings and a maintenance shop and equipment storage building. Five above-ground storage tanks are located adjacent to one of the small wood storage buildings. The tanks contained chemicals used for agricultural purposes.

Investigations at the site found elevated levels of nitrate and ammonia at the dry fertilizer loading area. Groundwater samples had nitrate at levels that exceeded state standards.

Contaminated soil was removed and applied on the land in accordance with state regulations. Groundwater monitoring wells were installed and samples were taken over a period of time. Nitrate is the only contaminant that still exceeds state standards.

A restrictive/environmental covenant was placed on the property because nitrate levels continue to exceed state standards. The covenant prohibits contaminated groundwater for domestic use and limits any activities that might interfere with the integrity of the cleanup action that was implemented at the site or creates an exposure to humans or the environment.

A site visit was conducted on November 20, 2014, and Ecology determined the following based on the periodic review:

- The cleanup actions are continuing to protect human health and the environment.
- Groundwater cleanup levels have not been met at the site; however, under WAC 173-340-740(6) (f), the cleanup action is determined to comply with cleanup standards, since the long-term integrity of the containment system is ensured and the requirements for containment technologies have been met.
- The environmental covenant for the property is in place and will be effective in protecting public health and the environment from exposure to hazardous substances and protecting the integrity of the cleanup action.
- No additional remedial actions are needed.

Ecology will review all comments received during the comment period and make changes to the periodic review, if appropriate. If no significant changes are made, the review will be finalized. If significant changes are made, an additional public comment period will be held.

Please direct questions and comments to site manager Patti Carter.

## GRAYS HARBOR COUNTY

Whitney's Chevrolet, Inc. Site  
123 W Pioneer Avenue, Montesano

Facility Site ID# 36813164

CSID# 5963

**Public comment period: 4/30/15 – 6/1/15**

*Draft Cleanup Plans and SEPA Review Available for Public Review and Comment*

Ecology invites you comment on proposed cleanup plans and SEPA review for the Whitney's Chevrolet, Inc. cleanup site. Past site activities polluted soil and groundwater with petroleum hydrocarbons. Proposed cleanup plans call for removal of free floating

contamination in groundwater. Institutional controls, which are measures to limit or prohibit activities that may interfere with the cleanup action, and compliance monitoring is also proposed.

The following are available for review and comment:

- Agreed order — a legal agreement that requires the potentially liable persons to clean up the site.
- Remedial investigation — describes the nature and extent of contamination.
- Feasibility study — evaluates cleanup options.
- Draft cleanup action plan (CAP) — describes how the site will be cleaned up and how the cleanup will meet state standards.
- State environmental policy act (SEPA) review — describes the potential environmental impact of the cleanup work.
- Updated public participation plan — describes the tools Ecology will use to inform the public and gather feedback.

Please direct questions and comments to Ecology site manager Marv Coleman.

## KING COUNTY

---

**Lora Lake Apartments Site**  
**Burien**

**Facility Site ID# 1880040**

**CSID# 2008**

**Public comment period: 5/4/15 – 6/17/15**

### *Cleanup Documents Available for Public Review and Comment*

Ecology invites you to comment on proposed cleanup actions to be taken at the Lora Lake Apartments site. Ecology staff held a public open house and presentation on the proposed actions on May 13 at Highline School District's Educational Resource and Administration Center (ERAC) in Burien.

Draft documents available for review and comment:

- Consent decree with draft cleanup action plan
- SEPA documents: amended mitigated determination of nonsignificance and SEPA checklist (Appendix A of the draft cleanup action plan)

Please direct questions and comments to site manager David South.

Site Manager: **David South**  
Northwest Regional Office  
425/ 649-7200  
[David.South@ecy.wa.gov](mailto:David.South@ecy.wa.gov)

More information may be found on Ecology's Public Involvement Calendar: <http://apps.ecy.wa.gov/pubcalendar/calendar.asp>

You may find the draft documents at the following locations:

- Lora Lake Apartments site: <https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=2008>
- Burien Library – 400 SW 152nd St., Burien, WA. Call 206/ 243-3490.
- Ecology’s Northwest Regional Office Toxics Cleanup Program – 3190 160th Ave. SE, Bellevue, WA. (Please contact Sally Perkins for an appointment at 425/ 649-7190 or [Sally.Perkins@ecy.wa.gov](mailto:Sally.Perkins@ecy.wa.gov).)

For special accommodations or documents in alternate format, call 425/ 425-7117, 711 (relay service), or 877/ 833-6341 (TTY).

**Boeing Field Chevron Site**  
**10805 East Marginal Way, Tukwila**

**Facility Site ID# 2551**

**CSID# 7030**

**Public comment period: 4/6/15 – 6/19/15**

*Comment Period Extended for Agreed Order and Public Participation Plan*

Ecology invites comments on an agreed order (legal agreement) with potentially liable persons (PLPs) and a public participation plan. The PLPs are Mr. Rajbir Sandhu, Ms. Pradeep Sandhu, RPNP Corporation, and Chevron Environmental Management Company. The comment period has been extended to June 19, 2015.

The agreed order requires the PLPs to conduct a remedial investigation and feasibility study, and prepare a draft cleanup action plan.

Site contamination is from historic and current operations. Soil and groundwater contamination at this site include petroleum hydrocarbons (gasoline and diesel), benzene, toluene, ethylbenzene, xylenes, and light Non-aqueous Phase Liquids (LNAPLs). The groundwater also contains free-phase LNAPL.

Please direct questions and comments to site manager Dale Myers.

**Port of Seattle Terminal 30 Site**  
1901 East Marginal Way South, Seattle

**Facility Site ID# 2055**

**CSID# 4394**

**Public comment period: 5/18/15 – 6/19/15**

*Site Documents Available for Public Review and Comment*

Ecology invites comments on a proposed consent decree, draft remedial investigation and feasibility study, draft cleanup action plan, and State Environmental Policy Act checklist and Determination of Non-Significance.

Terminal 30 site contamination is primarily due to its historic use as a fuel terminal. Leaks, spills, other discharges and releases of petroleum from historic above-ground petroleum storage tanks, piping and equipment resulted in groundwater and soil contamination. Soil contaminants include total petroleum hydrocarbons (TPH, which includes gasoline, diesel and oil). Groundwater contaminants include TPH, semi-volatile organic compounds including benzene, and polycyclic aromatic hydrocarbons (PAHs).

---

## LINCOLN COUNTY

---

Corner Express Site  
1131 Morgan Street, Davenport

Facility Site ID# 85214652

CSID# 7310

---

**Public comment period: 5/14/15 – 6/15/15**

### *Periodic Review Available for Public Review and Comment*

You are invited to review and comment on a document called a periodic review for the Corner Express site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA).

The purposes of the review are to evaluate site conditions after cleanup is considered complete, and to ensure continued protection of human health and the environment. This is the second periodic review for this site.

The site is bordered by State Highway 2 to the north, and residential homes and apartments to the west, east and south. A grocery store and commercial buildings are located on the north side of Highway 2. The site includes a retail petroleum service station and convenience store.

Underground storage tanks containing petroleum product leaked and caused soil and groundwater contamination. Several actions were taken to remove the underground storage tank system and associated piping, install treatment systems to address the contamination, and place a restrictive or environmental covenant on the property to limit site uses and protect the integrity of the cleanup actions.

A site visit was conducted on October 23, 2014, and Ecology determined the following based on the periodic review:

- The cleanup actions are continuing to protect human health and the environment.
- Soil cleanup levels have not been met at the site; however, under WAC 173-340-740(6) (f), the cleanup action is determined to comply with cleanup standards, since the long-term integrity of the containment system is ensured and the requirements for containment technologies have been met.
- Groundwater cleanup levels have not been met; however the groundwater plume is stable or shrinking and not moving off-site.
- The environmental covenant for the property is in place and will be effective in protecting public health and the environment from exposure to hazardous substances and protecting the integrity of the cleanup action.
- No additional remedial actions are needed.

Ecology will review all comments received during the comment period and make changes to the periodic review, if appropriate. If no significant changes are made, the review will be finalized. If significant changes are made, an additional public comment period will be held.

## OKANOGAN COUNTY

---

**Kings Pacific Pride Site**  
1419 N Methow Valley Hwy, Twisp

**Facility Site ID# 1625461**

**CSID# 230**

### *Cleanup Reports Received*

Ecology has received reports for the Kings Pacific Pride site in Twisp. The Quarterly Groundwater Monitoring Second Quarter 2014 report, the Quarterly Groundwater Monitoring Third Quarter 2014 report and the Quarterly Groundwater Monitoring Fourth Quarter 2014 report are available for public review.

The site is one of several being cleaned up under Ecology's Eastern Washington Clean Sites Initiative. The Kings Pacific Pride site has operated as a bulk fuel storage and distributor since the 1940s. Soil and groundwater at the site were contaminated with petroleum products.

For more information:

- Kings Pacific Pride site: <https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=3004>
- Eastern Washington Clean Sites Initiative: [http://www.ecy.wa.gov/programs/tcp/sites\\_brochure/CSI/Index.html](http://www.ecy.wa.gov/programs/tcp/sites_brochure/CSI/Index.html)

**1920 Port of Tacoma Road Site**  
1920 Port of Tacoma Road, Tacoma

**Facility Site ID# 30005**

**CSID# 3801**

**Public comment period: 5/15/15 – 6/15/15**

### *Draft Interim Action and Monitoring Plan and SEPA review Available for Public Review and Comment*

Ecology invites the public to comment on a draft interim action (partial cleanup) plan and State Environmental Policy Act (SEPA) review documents for the 1920 Port of Tacoma Road cleanup site. Past U.S. Oil Refining Co. operations polluted soil under a portion of the roadway with petroleum.

The cleanup will be coordinated with the City of Tacoma's plan to repave the road this summer. This cleanup will allow for current and future repairs to be made to the roadway without being hampered by the presence of contaminated soil.

Please direct questions and comments to site manager Marv Coleman.

Site Manager: **Marv Coleman**  
Southwest Regional Office  
**360/ 407-6259**

1, 2 & O Cleaners Site  
513 Meridian St S, Puyallup

Facility Site ID# 84471944

CSID# 3510

**Public comment period: 5/21/15 – 6/22/15**

*Site Proposed for Removal from Hazardous Sites List*

Ecology invites the public to comment on the decision to remove the 1, 2 & O Cleaners from the Hazardous Sites List. Some soil contaminated with tetrachloroethylene (PCE) was excavated and disposed of and in-situ chemical oxidation was used. A sub-slab depressurization system continues to operate and an environmental covenant prohibits activities that could result in the release of contamination remaining at the site. The site was cleaned up under the Voluntary Cleanup Program.

Please direct questions and comments to site manager Scott Rose.

PRG Group, Inc. Site  
3003 Taylor Way, Tacoma, Tacoma

Facility Site ID# 1245

CSID# 3255

*Discussions for New Agreed Order Underway*

Ecology and PRG Group, Inc (PRG) are discussing a new agreed order for dangerous waste cleanup for PRG's site in the Tacoma tide-flats at 3003 Taylor Way. Ecology requires environmental cleanup or "corrective action" at current and former dangerous waste treatment, storage and disposal facilities (TSD) with releases of dangerous wastes to soil, groundwater, or surface water. Facility owners or operators must clean up contaminated areas to protect human health and the environment.

Ecology uses the state cleanup law, the Model Toxics Control Act (MTCA), to conduct all environmental cleanups, including corrective action. As of January 23, 2015, PRG no longer operates as a TSD. However, PRG is still required to clean up any contamination at their site after stopping TSD activities. Under the new agreed order, PRG will complete a remedial investigation, feasibility study and draft a cleanup action plan. Once Ecology and PRG have a final draft of the new agreed order ready, it will be available for the public's review and comment. Please direct comments or questions to site manager Charles Hoffman.

**Sauro's Cleanerama Site**  
1401 Pacific Avenue, Tacoma

**Facility Site ID# 4339824**

**CSID# 3310**

**Public comment period: 4/30/15 – 6/1/15**

*Draft Cleanup Plans Available for Public Review and Comment*

Ecology invites the public to comment on proposed cleanup plans for the Sauro's Cleanerama site. Past dry cleaning operations polluted the site's soil and groundwater. The city of Tacoma owns the site.

The city did a partial cleanup in 2010. The draft cleanup plan proposes completing site cleanup through monitored natural attenuation and recording an environmental covenant.

The following are available for review and comment:

- Agreed order — a legal agreement that requires the city to finish site cleanup.
- Remedial investigation/feasibility study — describes the contamination and evaluates cleanup options.
- Draft cleanup action plan — describes how the city will clean up the contamination and how the cleanup will meet state standards.
- Updated public participation plan — describes the tools Ecology will use to inform the public and gather feedback.

Please direct questions and comments to site manager Marv Coleman.

**Pace Industries Puget Div Inc Site**  
2011 & 2101 Mildred St W, Tacoma

**Facility Site ID# 86715242**

**CSID# 6787**

**Public comment period: 4/30/15 – 6/1/15**

*Periodic Review Available for Public Review and Comment*

Ecology invites you to review and comment on a periodic review for the Pace Industries Puget Div Inc. cleanup site. Ecology reviews cleanup sites at least every five years to make sure they still protect human health and the environment.

Past aluminum die-casting operations polluted site soil with petroleum hydrocarbons. Contaminated soil was removed. Due to contamination being close to buildings, some remains on site. This soil is capped and an environmental covenant prohibits activities that could disturb it.

Based on the 2015 site visit, Ecology determined that the asphalt cap and buildings continue to eliminate direct exposure to contamination.

Please direct questions and comments to site manager Panjini Balaraju.

## SPOKANE COUNTY

---

**Martin Wood Products Site**  
2105 North Airport Street, Spokane

**Facility Site ID# 64145388**

**CSID# 3011**

**Public comment period: 4/16/15 – 5/16/15**

### *Periodic Review Available for Public Review and Comment*

Ecology invites you to review and comment on a document called a periodic review for the Martin Wood Products site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions after cleanup is considered complete, and to ensure protection of human health and the environment.

In the late 1940s, the site was occupied by an aluminum roofing, siding, and house trim manufacturing company. Other tenants have occupied portions of the site including an electrical transmission line contractor, an autobody repair shop, and an asphalt maintenance company. In 1999 all site buildings were demolished. The site is currently used as a bulk propane distribution facility.

In September 1997, the Spokane International Airport hired a contractor to conduct a Phase I Environmental Site Assessment and limited Phase II soil investigation at the site. Several areas of potential contamination were identified at the site including:

- Drum storage areas
- Former underground storage tank (UST) location
- Asphalt stockpiles
- Above-ground storage tanks
- Interior floor drain
- Auto and equipment storage areas
- Miscellaneous areas of general staining.

Soils contaminated with petroleum hydrocarbons were removed from the former floor drain area, from an area with visible staining on unpaved areas, and from an area along the railroad tracks. Soil was removed along the railroad track to approximately 15 feet below the ground surface. Samples collected from the final limits of the excavation indicated petroleum hydrocarbons were still present in soil above limits allowed by the state. The remaining contaminated soil could not be removed because it is too close to the railroad tracks and would negatively impact the tracks and future use.

Due to the remaining contamination, a restrictive covenant was placed on the property in 1999 to limit how the property may be used. The site received a determination that No Further Action is needed.

A site visit was conducted on October 23, 2014. There was no indication that the actions taken at the site had been compromised in any way. Ecology determined the following based on the periodic review:

- The cleanup actions completed at the site appear to be protective of human health and the environment.
- Soil cleanup levels have not been met at the site; however, under WAC 173-340-740(6) (f), the cleanup action is determined to comply with cleanup standards, since the long-term integrity of the containment system is ensured and the requirements for containment technologies have been met.
- The covenant for the property is in place and will be effective in protecting public health and the environment from exposure to hazardous substances and protecting the integrity of the cleanup action.

Ecology will review all comments received during the comment period and modifications to the periodic review will be made based on public comment, if appropriate. If no significant changes are made, the review will be finalized. If significant changes are made, an additional public comment period will be held.

**Blaine Marina Inc. Site**  
**Blaine**

**Facility Site ID# 2888**

**CSID# 63**

### **Public comment period: 5/18/15 – 6/16/15**

### *Remedial Investigation/Feasibility Study Report Available for Public Review and Comment*

Ecology is asking for comments on a draft report called a remedial investigation/feasibility report (RI/FS). The report details how the Port of Bellingham and Ecology investigated contamination, evaluated cleanup options, and identified a preferred option for the Blaine Marina, Inc. cleanup site in Blaine.

Extensive sampling across the Blaine Marina Inc. site has found petroleum, metals, volatile organic compounds, and naphthalene in groundwater and soil in and around the site. Most contamination at the site appears to be the result of an accidental fueling release by the tenant reported in May 1990.

**CSID# 4922**

### *Negotiations for Agreed Order in Progress*

Ecology and the city of Yakima are negotiating an agreed order to conduct a remedial investigation/feasibility study at the Tiger Oil N 1st St Fmr 6013 site. Negotiations are scheduled to end on July 31, 2015, unless ended sooner by one or more parties.

Please direct questions to site manager John Mefford.

Site Manager:

**John Mefford**

Central Regional Office

**Cream Wine Site**

111 E Lincoln Ave, Sunnyside

**Facility Site ID# 46552166**

**CSID# 4863**

**Public comment period: 5/6/15 – 6/5/15**

### *Site Proposed for Removal from Hazardous Sites List*

Ecology proposes to remove the Cream Wine site from the Hazardous Sites List (HSL). The site was ranked a 2 on the HSL (a rank of “1” represents the highest level of risk compared to other sites, and a rank of “5” represents the lowest). Ecology has determined that this site does not pose a threat to human health or the environment and recommends removing the site from the HSL.

Please direct questions and comments to site manager John Mefford.

**Comet Trailer Corp Site**  
501 S 1st St, Selah

**Facility Site ID# 503**

**CSID# 4198**

**Public comment period: 5/11/15 – 6/10/15**

*Draft Agreed Order Available for Public Review and Comment*

Ecology invites the public to comment on the agreed order for a remedial investigation/feasibility study for the Comet Trailer Corp site. A remedial investigation provides information about what contamination is present, and how far it extends. A feasibility study will compare different ways to clean up the site. It includes information about how much the cleanup will cost as well as how long it will take.

## GLOSSARY

**Agreed order** - A legal agreement with Ecology to make sure the cleanup meets the standards of Washington State's cleanup law, the Model Toxics Control Act (MTCA).

**Cleanup action plan (CAP)** - A document that describes the selected cleanup method(s) and specifies cleanup standards and other requirements. It is based on information and technical analyses generated during the RI/FS and consideration of public comments and community concerns. A draft of the CAP (DCAP) is made available for public review and comment before finalizing.

**Comment period** - A time period during which the public can review and comment on various documents and Ecology or EPA actions. For example, a comment period is provided to allow community members to review and comment on proposed cleanup action alternatives and proposed plans. Also, a comment period is held to allow community members to review and comment on draft feasibility studies.

**Consent decree** - A formal legal agreement that is filed with a court. It describes studies and/or cleanup work to be done at a site and the terms under which that work is to be done.

**Engineering design report** - Engineering design reports outline the specific details for implementation and operation of the first phase of the cleanup actions.

**ERTS** - Environmental Report Tracking System

**Five-year periodic review** - A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.

**Hazardous Sites List** - A statewide list of contaminated properties. Ecology may remove a site from the list only after determining that all remedial actions except confirmational monitoring have been completed and compliance with the cleanup standards has been achieved at the site, or the listing was erroneous.

**Independent cleanup action** - Any remedial action without department oversight or approval and not under an order or decree.

**LUST** - Leaking Underground Storage Tank

**NFA** - No Further Action

**Public participation plan** - Outlines and describes the tools Ecology will use to inform the public about site activities, and it identifies opportunities for the community to become involved in this process.

**PSI** - Puget Sound Initiative

**RCW** - Revised Code of Washington

**Remedial action** - Construction work done to clean up a contaminated site.

**Remedial investigation/feasibility study** - Two distinct but related studies. They are usually performed at the same time, and together referred to as the "RI/FS."

**RI/FS** - See Remedial Investigation/Feasibility Study

**SEPA** - State Environmental Policy Act

**Site Hazard Assessment (SHA)** - An assessment to gather information about a site to confirm whether a release of hazardous substances has occurred and to enable Ecology to evaluate the relative potential hazard posed by the release.

**WAC** - Washington Administrative Code

**UXO** - Unexploded Ordnance

**Voluntary Cleanup Program (VCP)** - The VCP is one of several options for cleaning up a hazardous waste site under the state's cleanup law. Under this option, property owners may perform a cleanup independently and request services from Ecology for a fee.

**WAC** - Washington Administrative Code

**WARM, Washington Ranking Method** - The method used to rank sites placed on the Hazardous Sites List.

**Additional glossary terms may be found on the Ecology website at:**
