FORMAL CLEANUPS

Ecology oversees complex cleanup sites to ensure that your health and that of the environment are protected.

FRANKLIN COUNTY

Pasco Landfill NPL Site	Facility Site ID# 575	Cleanup Site ID# 1910
-------------------------	-----------------------	-----------------------

Kahlotus Road and U.S. Highway 12, Pasco

Public comment period: 12/5/16 – 1/6/17

Draft Notice of Construction for a Regenerative Thermal Oxidizer Available for Public Review and Comment

Ecology invites you to review and comment on draft air quality permitting documents for a regenerative thermal oxidizer (RTO) at the Pasco Landfill NPL site.

Ecology is overseeing cleanup of contamination at the closed landfill. Cleanup requires installation of the RTO to control emissions of gases that will be removed by the soil vapor extraction system in the industrial waste portion of the landfill.

The following documents are available for public review:

- The original 2014 and revised 2016 permit applications.
- The risk analysis report for hydrogen chloride emissions.
- A preliminary determination of approval.
- A technical support document for that preliminary determination.
- A recommendation that the applicant's Health Impact Assessment shows acceptable impacts to the public from this project.
- The City of Pasco's preliminary determination that the project will not cause adverse impacts to the environment under the State Environmental Policy Act.

Please direct questions and comments to the air quality permit writer:

Robert Koster, P.E.

ISLAND COUNTY

Oak Harbor Middle School Site

Facility Site ID# 92511133 Cleanup Site ID# 2208

150 Southwest 6th Avenue, Oak Harbor

Public comment period: 12/8/16 – 1/9/17

Draft Periodic Review Available for Public Review and Comment

Ecology invites you to review and comment on a periodic review for a portion of the Oak Harbor Middle School site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site or property, as required by the Model Toxics Control Act (MTCA).

The purposes of the review are to evaluate site conditions and ensure continued protection of human health and the environment, when institutional controls are used as part of a remedy. Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

Please direct comments and questions to the periodic review coordinator:

Eugene Freeman

Chevron 90129 Site

Facility Site ID# 81966648 Cleanup Site ID# 10632

4700 Brooklyn Avenue Northeast, Seattle

Public comment period: 12/2/16 – 1/3/17

Site Register

Draft Agreed Order and Public Participation Plan Available for Public Review and Comment

Ecology invites you to review and comment on a draft agreed order and public participation plan for the Chevron 90129 site. Ecology proposes to enter into the legal agreement with Chevron and FH Brooklyn LLC, the parties responsible for cleanup. The agreed order requires Chevron and FH Brooklyn LLC to conduct a remedial investigation and feasibility study and prepare a draft cleanup action plan. The public participation plan describes how Ecology will inform the public about site activities, and it identifies opportunities for the community to become involved in this process.

As of November 1, 2016, the Chevron-branded gasoline service station and convenience store is closing. In December 1989, petroleum-impacted soil was discovered during station renovation activities at the site. Five underground storage tanks and dispenser islands were replaced for the renovation, and an estimated 450 cubic yards of petroleum-contaminated soil were removed.

In 1990, Chevron U.S.A. Inc. reported to Ecology that a release had occurred at the site and conducted independent investigation and cleanup activities, including groundwater monitoring, limited soil removal (during station rebuilds), and operation of an air sparging/soil vapor extraction system. Environmental investigations revealed that petroleum products were on the groundwater surface in several monitoring wells at the site.

Please direct comments and questions to the cleanup site manager:

Olympic Pipe Line Co Kent Site

Facility Site ID# 2401

Cleanup Site ID# 3070

74th Avenue South & South 259th Street, Kent

Public comment period: 12/2/16 – 1/9/17

Proposed Removal from the Hazardous Sites List

Ecology invites you to review and comment on the draft no further action opinion letter and Olympic Pipe Line Co. Kent Block Valve Subsurface Investigation Report.

In 1989, a release of gasoline and diesel associated with the Olympic Pipe Line Company Kent Block Valve was discovered. Olympic Pipe Line Company excavated approximately 30 cubic yards of hydrocarbon-impacted soil from the area immediately surrounding the block valve. Additional soil excavations were completed from August 31 – September 27, 1989, when another 1,950 tons of soil were removed. Approximately 168 gallons of contaminated ground water and product were pumped out and removed from the site.

Ecology decided the site meets state cleanup standards for soil and groundwater that protect human health and the environment. Therefore, Ecology is proposing to remove it from the Hazardous Sites List.

Please direct comments and questions to the site manager:

808 South Columbus Avenue, Goldendale

Site Register

Negotiations Extended for an Agreed Order

Ecology and the potentially liable persons for contamination at the Temple Distributing/Carson Oil site are negotiating an agreed order. The order will require them to conduct a remedial investigation and feasibility study, the process that locates all contamination and proposes options for cleaning it up.

Negotiations began on September 23, 2016, and were expected to end November 23, 2016, but that has been extended to March 31, 2017.

MASON COUNTY

Oakland Bay and Shelton Harbor Sediments Site

Facility Site ID# 18051

Cleanup Site ID# 13007

Mason County

Negotiations Underway for an Agreed Order

Ecology has started discussions with Simpson Timber Company to develop an agreed order for the Shelton Harbor area of the Oakland Bay and Shelton Harbor Sediments site. The agreed order would require Simpson Timber to develop interim work action plans for areas of Shelton Harbor that will be subject to habitat restoration and saltmarsh construction projects that are being conducted by the Squaxin Island Tribe and South Puget Sound Salmon Enhancement Group.

The agreed order would also require Simpson to conduct a remedial investigation and feasibility study, the process that locates all contamination and proposes options for cleaning it up. Following that, they will be required to draft a cleanup action plan for the remainder of Shelton Harbor.

We expect to hold a public comment period for the draft agreed order in late winter 2017.

Breakwater Marina Site

Facility Site ID# 1794148

Cleanup Site ID# 5266

5603 North Waterfront Drive, Tacoma

Public comment period: 11/28/16 – 12/28/16

Proposed Removal from the Hazardous Sites List

Ecology invites you to comment on removing the Breakwater Marina cleanup site from the **Hazardous Sites List**.

The site had petroleum contamination in the soil and groundwater and was cleaned up under the **Voluntary Cleanup Program**.

Ecology has determined that this site does not pose a threat to human health or the environment and recommends removing the site from the Hazardous Sites List.

Cascade Timber 3 Site

Facility Site ID# 1206

Cleanup Site ID# 2693

Thorne Road and Maxwell Way, Tacoma

Public comment period: 12/22/16 – 1/23/17

Draft Periodic Review Report Available for Public Review and Comment

Ecology invites you to review and comment on a draft periodic review for the Cascade Timber 3 cleanup site. A periodic review is conducted at least every five years after beginning cleanup at a site or property, as required by MTCA.

The Cascade Timber 3 property sits along Maxwell Way between Port of Tacoma Road and Thorne Road. The Port of Tacoma currently leases the site to Washington United Terminal for storing empty shipping containers and similar materials.

From 1978 to 1984, the Cascade Timber Company used the property as a log sort yard. In 1982, the company brought about 500 tons of ASARCO slag to an area of the property. A 1985 Ecology study found high levels of metals in stormwater leaving log sort yards, including Cascade Timber 3. Under a 1991 cleanup agreement with Ecology, the Port of Tacoma put an asphalt cap over the site.

Although contaminated soil remains on the site, the asphalt cap protects people from contacting it. The port must continue to monitor groundwater every 18 months and inspect the cap every 30 months. The periodic review found that the cleanup is still protective.

Coast Engine & Equipment Corp (Progress Rail) Site

Facility Site ID# 26693246 Cleanup Site ID# 4267

4012 State Route 509 South Frontage Road, Tacoma

Public comment period: 12/8/16 – 1/9/17

Proposed Removal from the Hazardous Sites List

Ecology invites you to comment on removing the Coast Engine & Equipment Corp (also known as Progress Rail) cleanup site from the Hazardous Sites List. Diesel fuel contaminated soil and groundwater on the site following a spill in 2012.

Progress Rail Services worked with Ecology under the **Voluntary Cleanup Program** to remove the contaminated soil and monitor the groundwater. Several soil and groundwater tests between 2012 and 2016 showed that the cleanup was successful. Ecology has determined that no further action is necessary.

The No Further Action letter is available for your review. It is a technical letter that describes what was done to clean up the site and how we confirmed that the cleanup was successful.

SKAGIT COUNTY

Forest Estates Landfill Site

Facility Site ID# 2686

Cleanup Site ID# 4767

Section Street and Woodland Drive, Mount Vernon

Public comment period: 12/22/16 – 1/23/17

Draft Periodic Review Available for Public Review and Comment

Ecology invites you to review and comment on a periodic review for a portion of the Forest Estates Landfill site. A periodic review is conducted at least every five years after beginning cleanup at a site or property, as required by MTCA.

Site Register

The purposes of the review are to evaluate site conditions and ensure continued protection of human health and the environment, when institutional controls are used as part of a remedy. Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

SPOKANE COUNTY

Costco Wholesale 670 Site

Facility Site ID# 82832887 Cleanup Site ID# 1073

5601 East Sprague Avenue, Spokane Valley

Public comment period: 12/8/16 – 1/9/17

Draft Ten-Year Periodic Review Available for Public Review and Comment

Ecology invites you to review and comment on the draft second periodic review report for the Costco Wholesale 670 site. We conduct a periodic review at least every five years after beginning cleanup at a site. The purpose of the review is to evaluate current site conditions and to ensure the continued protection of people and the environment.

In 1995, former owners Home Depot and Union Pacific Railroad excavated about 36,000 cubic yards of contaminated soil was removed from the site. About 1,900 additional cubic yards of soil were placed in containment cells under the parking lot. In 2000, Costco excavated another 1,000 cubic yards of contaminated soil and 5,000 cubic yards of contaminated railroad ballast and put them in containment cells covered with clean soil. Because the cells with contamination remain at the site, a restrictive covenant was filed to make any future property owners aware of it. Ecology visited the site October 27, 2016, and found that the cleanup actions remain intact.

Site Register

Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

STEVENS COUNTY

Loon Lake Self Service Site

Facility Site ID# 6676385 Cleanup Site ID# 5414

3937 Gardenspot Road, Loon Lake

Public comment period: 12/8/16 – 1/9/17

Draft Ten-Year Periodic Review Available for Public Review and Comment

Ecology invites you to review and comment on the draft second periodic review report for the Loon Lake Self Service site. We conduct a periodic review at least every five years after beginning cleanup at a site. The purpose of the review is to evaluate current site conditions and to ensure the continued protection of people and the environment.

From October to November 1997, a 10,000-gallon underground storage tank leaked an estimated 2,320 gallons of gasoline. That tank and its associated piping were removed. Groundwater monitoring results for four consecutive quarters showed no contamination requiring cleanup. Some contaminated soil remains at the site, so a restrictive covenant was filed to make any future property owners aware of it. Ecology visited the site October 27, 2016, and found that the cleanup actions remain intact.

Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

THURSTON COUNTY

Restover Truck Stop Site

Facility Site ID# 244

Cleanup Site ID# 116

2725 93rd Avenue Southwest, Tumwater

Public comment period: 11/22/16 – 12/23/16

Proposed Removal from the Hazardous Sites List

Ecology invites you to review and comment on removing the Restover Truck Stop site from the Hazardous Sites List.

The site was ranked a 3 on the Hazardous Sites List (a rank of 1 represents the highest level of risk compared to other sites, and a rank of 5 represents the lowest). The site had petroleum contamination in the soil and groundwater and was cleaned up under the **Voluntary Cleanup Program**.

Ecology has decided that this site does not pose a threat to human health or the environment and recommends removing the site from the Hazardous Sites List.

WHATCOM COUNTY

Blaine Marina Inc. Site

Facility Site ID# 2888

Cleanup Site ID# 63

Marine Drive & M^cMillan Avenue, Blaine

Public comment period: 12/12/16 – 1/25/17

Draft Cleanup Documents Ready for Public Review and Comment

Ecology invites you to review and comment on several draft documents about cleanup at the Blaine Marina Inc cleanup site. They include:

- A draft Cleanup Action Plan
- A State Environmental Policy Act determination of non-significance
- An amendment to the existing agreed order between Ecology and Port of Bellingham

In 2012, Ecology and the Port of Bellingham entered into a legal agreement called an agreed order. It required that the Port repair a failing section of bulkhead, conduct an environmental investigation of the site, and prepare a draft cleanup plan based on its findings.

Site Register

The Port completed these tasks over the last several years. Ecology is now requiring the Port to take some additional actions to complete the design of the cleanup plan for the site. These actions are described in the amendment to the agreed order.

GLOSSARY

Agreed order - A legal agreement with Ecology to make sure the cleanup meets the standards of Washington State's cleanup law, the Model Toxics Control Act (MTCA).

Cleanup action plan (CAP) - A document that describes the selected cleanup method(s) and specifies cleanup standards and other requirements. It is based on information and technical analyses generated during the RI/FS and consideration of public comments and community concerns. A draft of the CAP (DCAP) is made available for public review and comment before finalizing.

Comment period - A time period during which the public can review and comment on various documents and Ecology or EPA actions. For example, a comment period is provided to allow community members to review and comment on proposed cleanup action alternatives and proposed plans. Also, a comment period is held to allow community members to review and comment on draft feasibility studies.

Consent decree - A formal legal agreement that is filed with a court. It describes studies and/or cleanup work to be done at a site and the terms under which that work is to be done.

Engineering design report - Engineering design reports outline the specific details for implementation and operation of the first phase of the cleanup actions.

ERTS - Environmental Report Tracking System

Five-year periodic review - A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.

Hazardous Sites List - A statewide list of contaminated properties. Ecology may remove a site from the list only after determining that all remedial actions except confirmatory monitoring have been completed and compliance with the cleanup standards has been achieved at the site, or the listing was erroneous.

Independent cleanup action - Any remedial action without department oversight or approval and not under an order or decree.

LUST - Leaking Underground Storage Tank

NFA - No Further Action

Public participation plan - Outlines and describes the tools Ecology will use to inform the public about site activities, and it identifies opportunities for the community to become involved in this process.

PSI - Puget Sound Initiative

RCW - Revised Code of Washington

Site Register

Remedial action - Construction work done to clean up a contaminated site.

Remedial investigation/feasibility study - Two distinct but related studies. They are usually performed at the same time, and together referred to as the "RI/FS."

RI/FS - See Remedial Investigation/Feasibility Study

SEPA - State Environmental Policy Act

Site Hazard Assessment (SHA) - An assessment to gather information about a site to confirm whether a release of hazardous substances has occurred and to enable Ecology to evaluate the relative potential hazard posed by the release.

TCP - Ecology's Toxics Cleanup Program

Total petroleum hydrocarbons (TPH) - A term used to describe a large family of several hundred chemical compounds that originally come from crude oil. TPH is a mixture of chemicals made mainly from hydrogen and carbon.

UXO - Unexploded Ordnance

Voluntary Cleanup Program (VCP) - The VCP is one of several options for cleaning up a hazardous waste site under the state's cleanup law. Under this option, property owners may perform a cleanup independently and request services from Ecology for a fee.

WAC - Washington Administrative Code

WARM, Washington Ranking Method - The method used to rank sites placed on the Hazardous Sites List.
