New Groundwater Pilot Studies to Begin for Burlington-Environmental Georgetown Site

Starting in May, contractors working for Stericycle will study methods that would enhance the breakdown of 1,4 dioxane found in groundwater under Georgetown (east of 4th Ave). The studies will test two different below ground cleanup methods. The studies will be done along 6th Avenue South and near the intersection of Maynard Avenue South and South Lucile Street.

Site Register

J.H. Baxter & Co. Inc.

Facility Site ID# 2068

Cleanup Site ID# 93

5015 Lake Washington Blvd N, Renton

Public comment period: 4/13/2017— 5/15/2017

Periodic Review Available for Public Review and Comment

Ecology invites you to review and comment on a document called a periodic review for a portion of the J.H. Baxter & Co. Inc site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site or property, as required by the Model Toxics Control Act.

The purposes of the review are to evaluate site conditions and to ensure continued protection of human health and the environment, when institutional controls are used as part of a remedy. Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

The J.H. Baxter Co. Inc. site is a former wood treatment plant, located on a 20 acre lot that operated from 1955 until closure in 1982. The primary contaminants of concern at the site are pentachlorophenol (PCP) and polycyclic aromatic hydrocarbons (PAHs) into soil, groundwater, and lake sediments. In 1988, J.H. Baxter & Co. Inc. and the Department of Ecology entered into a legal agreement to perform a remedial investigation at the site.

The remedy at the site included removal of contamination in source areas before soil stabilization, excavation of contaminated soil near a former tank farm followed by thermal treatment or off-site disposal, removal and incineration of contaminated lake sediments, creation of a wetland buffer adjacent to Lake Washington, capping of residual soil contamination, groundwater monitoring of water discharging to Lake Washington, and implementation of institutional controls.

An Environmental Covenant was recorded on the property on Aug. 4, 2010. Ecology issued a No Further Action letter for the property on December 1, 2010.

Five groundwater compliance monitoring wells were sampled during 2014. None of the wells exceeded clean-up levels for any of the contaminants of concern.

Please direct comments and questions to the Periodic Review Coordinator:

Jacobson Terminals Marine

Facility Site ID# 6662658 Cleanup Site ID# 4860

5350 30th Avenue NW, Seattle

Public Comment Period: 5/26/17 – 6/26/17

Draft Environmental Documents for Public Comment

Jacobson Terminal Marine site is located in the Ballard neighborhood of Seattle. The site is east of the United State Army Corp of Engineers Chittenden Locks. The property currently operates as a marine terminal providing docking facilities for large fishing boats and storage for smaller boats.

Investigation and cleanup of contamination at this site has been ongoing by the property owner. The purpose of current site activities is to adequately characterize the site, propose remedial actions for remaining contamination, and provide preliminary documentation to assist in the planning and management of future cleanup efforts.

You are invited to comment on the following documents:

- Draft Remedial Investigation Report and Feasibility Study. This report documents the characterization of contaminated soil, groundwater, and sediments at the Site and develops remedial alternatives for site cleanup.
- Interim Action Work Plan. This plan will clean up PCB contamination in the north area of the site
- Draft Cleanup Action Plan. This identifies the cleanup alternative for cleanup of the remaining areas of the site to the maximum extent practicable.
- Plans and Specifications for site-specific tasks to implement the cleanup.
- Draft Public Participation Plan

KLICKITAT COUNTY

Chevron, Temple Distributing, and Carson Oil Facility Site ID# **95474961** Cleanup Site ID# **11985**
808 South Columbus, Goldendale

Public comment period: 5/8/17 – 6/8/17

Enforcement Order for Review and Comment

Ecology is providing an opportunity for the public to comment on the enforcement order issued to Chevron, Temple Distributing, and Carson Oil. The order requires the three parties to complete a remedial investigation, feasibility study, and draft cleanup action plan.

Site background

The site, known as Temple Distributing Carson Oil, has operated as a bulk petroleum fuel distributor (leaded gasoline, diesel, unleaded gasoline) since the late 1920s. Active operations ceased in 2012. Today, the site consists of a building, concrete pads, and an underground piping infrastructure.

In 2012, a spill of around 970 gallons of gasoline occurred from an above ground storage tank. The gasoline spilled onto the gravel parking lot. An environmental investigation from 2012 confirmed that soil and groundwater were contaminated with petroleum products above state cleanup levels. Since the 2012 spill was gasoline, other contamination may be due to historical operations at the site.

PIERCE COUNTY

Occidental Chemical Corporation Site

Facility Site ID# 1212

Cleanup Site ID# 4326

605 Alexander Avenue, Tacoma

Public comment period (extended): 1/27/17 – 6/26/17

Comment Review Extended: Draft Cleanup Documents Ready for Public Review and Comment

The Occidental Chemical Corporation's Tacoma site was home to chemical production, ship building, and military operations from 1929-2002. Contamination from these operations has contaminated soil and groundwater at and near the property.

Contaminants at this site include:

- Chlorinated volatile organic compounds (CVOCs)
- Sodium hydroxide
- Salt (sodium chloride)
- Metals
- By-products of chlorinated solvent production
- Poly-chlorinated Biphenyls (PCBs)
- Dioxins/furans.

You are invited to comment on the following draft documents: Agreed Order, Feasibility Study, Vapor Intrusion Report and Memorandum, Porewater Sampling Report, Corrective Action Permit

Ecology will consider and respond to all comments before making the documents final and making our final decision. You are also invited to an open house and public hearing to learn more and provide formal comment:

Draft Agreed Order for Public Review and Comment

Ecology invites you to review and comment on the draft agreed order with the U.S. Department of the Navy for the East Waterway Site in Everett. The draft agreed order with the Navy is a legal document between Ecology and the Navy (one of the Potentially Liable Persons, or PLP). This proposed agreement outlines Navy cooperation in the completion of the remedial investigation/feasibility study and draft cleanup action plan, which includes, but is not limited to providing access to its property and available data, and review and comment on draft reports.

622 S Jefferson St SE, Olympia

Determination of No Further Action

Five steel underground storage tanks (USTs) were decommissioned by removal and off-Site disposal: one 500-gallon heating oil UST, one 500-gallon waste oil UST, two 4,000-gallon gasoline USTs, and one 8,000-gallon gasoline UST. Piping for the USTs and a dispenser island pad connected to the gasoline USTs were also removed. A total of 117.52 tons of petroleum contaminated soil was excavated and disposed of at Cowlitz County Landfill.

Site history

Five unregistered USTs were found in May 2016. Ecology registered these USTs under identification number 620329. Soils contaminated with diesel associated with a heating oil UST and soils contaminated with gasoline, heavy oil, and chromium associated with a waste oil UST were identified. No contaminated soils were found in association with the gasoline USTs. Contaminated soil was excavated and disposed of off-Site. All Site contaminant of concern (COC) concentrations in soil sampled at the final excavation extents were not detected or less than the Model Toxics Control Act (MTCA) Method A cleanup levels. Groundwater and water found inside two of the gasoline USTs were tested for Site COCs. All Site COC concentrations in water tested were not detected or well below the MTCA Method A cleanup levels. Ecology issued a No Further Action opinion on April 26, 2017.

YAKIMA COUNTY

LaBamba Restaurant

Facility Site ID# 4171173 Cleanup Site ID# 3347

3202 Main Street, Union Gap

Public comment period: 04/19/2017 – 05/19/2017

Proposed Removal from Ecology's Hazardous Sites List

The Washington State Department of Ecology (Ecology) is proposing to remove the LaBamba site, located at 3202 Main Street, Union Gap, Washington, from its Hazardous Sites List. The Hazardous Sites List is a statewide list of contaminated properties. The site is currently ranked a "2" on the list. A rank of "1" is the highest level of concern compared to other sites on the list, and a rank of "5" is the lowest. This site was used as a gas station in the past. The pollution from the historical service station is no longer a threat to human health or the environment.

Contaminants: Gasoline and Diesel fuel
Affected Media: Soil and Groundwater

CLARK COUNTY

Union 76 (a.k.a. Jim's BP)

Facility Site ID# 1051

Cleanup Site ID# 4980

13 East Main Street, Battle Ground

No Further Action Required

The property was developed as a gas station in the early 1980s. During underground storage tank upgrade activities in 1991, a release of petroleum was discovered. Throughout most of the 1990s, Ecology lead remedial actions and eventually determined no further action was needed in 2000. In 2010, additional investigation was conducted due to a property transaction via foreclosure. Petroleum contaminated soil and groundwater was discovered. The site was re-added to the Hazardous Sites List in 2014 and the property manager pursued additional remedial actions through the Voluntary Cleanup Program. A no further action determination was issued on April 10, 2017. The site is currently on the Hazardous Sites List and therefore will require public comment to delist.

Contaminants: Petroleum

Affected media: soil and groundwater

SPOKANE COUNTY

2911 West Fort George Wright Drive site

Facility Site ID# 18251

Cleanup Site ID# 13040

2911 W Fort George Wright Dr, Spokane

No Further Action Required

Ecology has determined that no further action is necessary at this site. The site is cleaned up. The site was part of the George Wright Military Reservation (Fort Wright) established in 1899. The site remained largely undeveloped during Fort Wright's operations; however, from 1919-1949, Spokane Gun Club operated a shotgun skeet shooting range on the property.

Fort Wright was transferred from the U.S. Army to the U.S. Air Force before it was closed in 1958. After closure, the Fort Wright property was divided and sold. The site was purchased by the Sisters of the Holy Names of Jesus and Mary, and the existing convent building was built in 1968.

The site operated as a convent from about 1968 until 2016. The site is currently being developed into multi-family housing and a trailhead that will connect to a conservation area near the Spokane River.

The contaminants found in the soil included: oil-range petroleum hydrocarbons, lead, methylene chloride, and carcinogenic polynuclear aromatic hydrocarbons.

GLOSSARY

Agreed order - A legal agreement with Ecology to make sure the cleanup meets the standards of Washington State's cleanup law, the Model Toxics Control Act (MTCA).

Cleanup action plan (CAP) - A document that describes the selected cleanup method(s) and specifies cleanup standards and other requirements. It is based on information and technical analyses generated during the RI/FS and consideration of public comments and community concerns. A draft of the CAP (DCAP) is made available for public review and comment before finalizing.

Comment period - A time period during which the public can review and comment on various documents and Ecology or EPA actions. For example, a comment period is provided to allow community members to review and comment on proposed cleanup action alternatives and proposed plans. Also, a comment period is held to allow community members to review and comment on draft feasibility studies.

Consent decree - A formal legal agreement that is filed with a court. It describes studies and/or cleanup work to be done at a site and the terms under which that work is to be done.

Engineering design report - Engineering design reports outline the specific details for implementation and operation of the first phase of the cleanup actions.

ERTS - Environmental Report Tracking System

Five-year periodic review - A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.

Formal cleanups - TCP conducts or supervises formal cleanups (also called formal oversight) when site owners are under court order or decree, or when cleanups are funded by legislative initiatives. Formal cleanups will meet MTCA standards. The public can provide input during public meetings and comment periods.

Hazardous Sites List - A statewide list of contaminated properties. Ecology may remove a site from the list only after determining that all remedial actions except confirmatory monitoring have been completed and compliance with the cleanup standards has been achieved at the site, or the listing was erroneous.

Independent cleanups - Property owners conduct independent cleanups on their own, or with help from our Voluntary Cleanup Program (VCP). Independent cleanups still meet MTCA standards, but property owners set their own timelines. Owners can ask for our help through the VCP but do not have to. They only need to hold public meetings or comment periods if a site needs to be de-listed.

Independent cleanup action - Any remedial action without department oversight or approval and not under an order or decree.

Site Register

LUST - Leaking Underground Storage Tank

NFA - No Further Action

Public participation plan - Outlines and describes the tools Ecology will use to inform the public about site activities, and it identifies opportunities for the community to become involved in this process.

PSI - Puget Sound Initiative

RCW - Revised Code of Washington

Remedial action - Construction work done to clean up a contaminated site.

Remedial investigation/feasibility study - Two distinct but related studies. They are usually performed at the same time, and together referred to as the "RI/FS."

RI/FS - See Remedial Investigation/Feasibility Study

SEPA - State Environmental Policy Act

Site Hazard Assessment (SHA) - An assessment to gather information about a site to confirm whether a release of hazardous substances has occurred and to enable Ecology to evaluate the relative potential hazard posed by the release.

TCP - Ecology's Toxics Cleanup Program

Total petroleum hydrocarbons (TPH) - A term used to describe a large family of several hundred chemical compounds that originally come from crude oil. TPH is a mixture of chemicals made mainly from hydrogen and carbon.

UXO - Unexploded Ordnance

Voluntary Cleanup Program (VCP) - The VCP is one of several options for cleaning up a hazardous waste site under the state's cleanup law. Under this option, property owners may perform a cleanup independently and request services from Ecology for a fee.

WAC - Washington Administrative Code

WARM, Washington Ranking Method - The method used to rank sites placed on the Hazardous Sites List.
