Washington Mandatory Greenhouse Gas Reporting Program Reported Emissions for 2012 – 2015

Certain large facilities and transportation fuel suppliers are required to report their greenhouse gas (GHG) emissions to Ecology beginning with the 2012 emissions year. Owners or operators of the following are required to report:

- Facilities that emit at least 10,000 metric tons of carbon dioxide equivalent (CO₂e) of greenhouse gases per year in Washington.
- Suppliers of liquid motor vehicle fuel, special fuel, or aircraft fuel that supply products equivalent to at least 10,000 metric tons of carbon dioxide per year in Washington.

The tables below contain data reported to Ecology as of April 24, 2017. The reported emissions are preliminary and have not been fully verified by Ecology. This information is subject to change.

Table 1 includes information about each facility's projected status under the Clean Air Rule (CAR). The list is not a determination of parties that will be ultimately covered by the CAR. Petroleum fuel producers/importers and natural gas distributors are not currently included in Washington's GHG reporting program, so emissions from those activities are not included in Table 1.

Table 2 provides required reporting data for transportation fuel suppliers, but does not include any CAR projection information. There is some overlap between the existing transportation fuel supplier GHG reporting program (Table 2) and the petroleum fuel producer or importer and natural gas distributor program included in the CAR. Because there are significant differences in reporting data and calculation methodologies in Table 2 and the changes to the reporting program under the CAR, transportation fuel supplier data cannot be used to determine applicability under the CAR.

This dataset does not include all of Washington's emissions. See the Washington State Greenhouse Gas Emissions Inventory (http://www.ecy.wa.gov/climatechange/ghg_inventory.htm) for statewide emissions totals.

Table 1: Facility GHG Reporting Data

All emissions in units of metric tons of carbon dioxide equivalents (MT CO₂e) per year.

1. Total emissions include both biogenic and non-biogenic emissions. Emissions are calculated using the global warming potentials (GWPs) in Table A-1 (<http://apps.leg.wa.gov/WAC/default.aspx?cite=173-441&full=true#173-441-040>) of Washington Administrative Code (WAC) 173-441. Ecology recalculated past reports when necessary to make all emissions values use the most recent GWPs from the IPCC's Fourth Assessment Report (AR4).
2. Biogenic emissions are limited to carbon dioxide emitted from the combustion of biomass-derived fuels like wood, ethanol, biodiesel, or biogenic natural gas. Biogenic emissions are already included in the reporter's total emissions and should not be added to their total emissions.
3. A facility's projected status under the CAR, which is included for informational purposes only. This is an estimate, not a determination of parties that will be ultimately covered by the CAR. Emissions associated with petroleum fuel producer or importer and natural gas distributor activities are not included here because those emissions were not reported until 2016. TransAlta Centralia Generation LLC and agricultural emissions are exempt. CAR threshold begins at 100,000 MT CO₂e per year and decreases by 5,000 MT CO₂e every three years until reaching 70,000 MT CO₂e in 2035.
4. Parties currently defined as energy intensive and trade exposed (EITE) in the CAR join the program in emissions year 2020 or when their emissions exceed the compliance threshold, whichever comes later.
5. Facility opted out of EITE status. The CAR allows facilities to opt out of EITE status and instead reduce emissions under the standard compliance pathway.
6. One or more years of emissions for this facility are currently under review. Ecology assigned a temporary emissions value for this facility.
