FORMAL CLEANUPS

Ecology oversees complex cleanup sites to ensure that your health and that of the environment are protected.

BENTON COUNTY

Hanford US DOE 384 Powerhouse Bunker Benton County	Facility Site ID#	600078	Cleanup 801 Site ID#
---	--------------------------	---------------	-----------------------------

Public Comment Period: 5/24/2018 – 6/22/201

Site Proposed for Removal from Hazardous Sites List

You are invited to comment on the proposal to remove the Hanford 384 Powerhouse Bunker site from the Hazardous Sites List (HSL). The 384 Powerhouse Bunker tank release was located within the industrial boundary of the Hanford Site's 300 Area. The 300 Area is one of four U.S. Environmental Protection Agency (US EPA) National Priority List (NPL) sites at the U.S. Department of Energy Hanford Site. Cleanup of the larger NPL site is still in progress.

The 384 fuel bunker tank consisted of four connected concrete tanks used to store #2 diesel fuel and Bunker C (#6 diesel fuel) for the 384 Powerhouse. The fuel oil tanks were drained in 1998 and removed in 2001. The 384 Powerhouse was removed in 2009. Several unplanned releases occurred at the 300 Area Powerhouse, and the associated waste sites were excavated in 2010, and the soil was removed for disposal at the Environmental Restoration Disposal Facility (ERDF) at the 200 Area of the Hanford Site.

Subsequently, it was demonstrated through verification sampling that cleanup goals had been achieved, and the site was reclassified as Interim Closed Out in accordance with the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA, also called "Superfund") Interim Action Record of Decision for the 300-FF-2 Operable Unit, Hanford Site, Benton County, Washington (300-FF-2 ROD).

The verification data was also evaluated against Model Toxics Control Act [WAC 173-340 (2007)] cleanup levels for direct contact, groundwater protection, and river protection. Completion of these sites was further documented through completion of Hanford Federal Facility and Consent Order (Tri-Party Agreement) Interim Milestone M-016-69, "Complete All Interim 300 Area Remedial Actions," which was completed on September 17, 2015.

Site Register

Cleanup actions at this site have been demonstrated to be protective of human health and the environment, and Ecology now proposes to remove it from the HSL.

Please direct comments/questions to:
John Price, cleanup project manager
509-372-7921 or John.Price@ecy.wa.gov

Richland Horn Rapids Landfill

Facility Site ID# 308

Cleanup Site ID# 4891

3102 Twin Bridges Rd, Richland

Environmental Report Received

Ecology has received a report for the Richland Horn Rapids Landfill Site in Richland. The Remedial Investigation Phase 1 Push Probe Investigation Report, dated February 2018, is available for public review. The site is currently under an Agreed Order to conduct a Site Characterization. This is Phase 1 of that work. When the Remedial Investigation is complete, the full report will be available for public review and comment.

For more information:

- Richland Horn Rapids Landfill site: <https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=4891>
- Central Regional Office, 1250 W Alder St, Union Gap (contact the public records coordinator for an appointment: **509-575-2027** or cropublicrequest@ecy.wa.gov)

CHELAN COUNTY

Michael Irrigation Site

Facility Site ID# 3154383

Cleanup Site ID# 2149

5640 Sunset Hwy, Cashmere

Public Comment Period: 5/24/2018 – 6/25/2018

Agree Order Available for Public Review and Comment

Ecology is providing an opportunity for the public to comment on the Agreed Order for the completion of a Remedial Investigation and Feasibility Study for the site identified by Ecology as the "Michael Irrigation Site" (also known as John Michael Lease Site).

Site Background

BNSF Railway Company (BNSF) has active railroad tracks running next to the Wenatchee River in Cashmere. BNSF also owns a 0.34 acre parcel adjacent to the railroad corridor in the west part of Cashmere. Oil was

Site Register

found in soil at the site during a telephone pole installation in 2004. Since 2004, BNSF has done several investigations into soil and groundwater contamination at the site.

This Agreed Order is for continued investigation of soil and groundwater at the site and to determine the appropriate cleanup option for the site.

A remedial investigation (RI) report will be prepared that presents the current understanding of the site, based on past and new studies. A feasibility study (FS) report will then be prepared to show options for cleaning up the contaminated soil and groundwater. The potential cleanup options will minimize or eliminate the risk to human health and the environmental.

After we finish the RI and FS reports, BNSF will complete a draft Cleanup Action Plan (CAP) that describes the cleanup strategy preferred by Ecology. The CAP will be part of a legal agreement that requires cleanup of the Site. Ecology will post the legal agreement and CAP for public review and comment prior to finalization. Actual cleanup will begin after public comment.

Submit comments to: Frank Winslow, site manager
Ecology Central Regional Office, 1250 W Alder St, Union Gap, WA 98903-0009
509-454-7835 or frank.winslow@ecy.wa.gov

Documents can be reviewed at:

- Ecology's Michael Irrigation webpage: <https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=2149>

CLARK COUNTY

**Special Events and Convention Center
Vancouver**

Facility Site ID# 87668199 Cleanup Site ID# 776

Public Comment Period: 5/10/2018 – 6/7/2018

Draft Periodic Review Available for Public Review and Comment

Soil and groundwater investigations were conducted in 2001-2003 and 2005. While three underground storage tanks (USTs) had already been removed, two remaining USTs plus the historical piping associated with the earlier USTs were discovered. Groundwater sampling results showed no impacts. Remediation activities were conducted in 2003 and 2004.

Ecology issued a No Further Action determination in August 2005 for the residual lead contamination left in the soil. There is an environmental covenant in place on the site.

KING COUNTY

Bothell Paint & Decorating

Facility Site ID# 93536765 Cleanup Site ID# 3051

18004 & 18005 Bothell Way NE, Bothell

Final Cleanup Action Plan available

Ecology and the City of Bothell have entered into a new agreement called an Agreed Order, which requires the City to clean up the Bothell Paint and Decorating Site. The Final Cleanup Action Plan (FCAP) is now available on the Bothell Paint & Decorating Cleanup website: <https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=3051>

Historical operations on the property included automobile repair and dealerships, retail paint and flooring, and sandblasting.

One underground storage tank containing gasoline was removed in 1988. Petroleum hydrocarbons including gasoline were found in soil and groundwater. Interim action soil cleanups for petroleum hydrocarbons and metals were conducted in 2010, 2013, and 2014.

Chemicals of concern remaining at the site after the interim action cleanups are:

- In soil: Gasoline and motor oil-range petroleum hydrocarbons
- In groundwater: Diesel and motor oil range petroleum hydrocarbons, and arsenic

The selected remedy in the FCAP is a combination of:

- Excavation of contaminated soils (already completed as interim actions)
- Engineering controls (capping under roadway)
- Institutional controls (including property environmental covenants) restricting access to soil and groundwater
- Monitoring the natural attenuation (decay) of contaminants in groundwater to achieve compliance

For questions about the site, contact:

Jerome Cruz

3190 160th Ave SE

Bellevue, WA 98008

jerome.cruz@ecy.wa.gov

Site Register

Bothell Landing

Facility Site ID# 73975762 Cleanup Site ID# 3013

18120, 18126, 18132 Bothell Way NE & 10001 Woodinville Dr, Bothell

Final Cleanup Action Plan available

Ecology and the City of Bothell have entered into an agreement called an Agreed Order, which requires the City to clean up the Bothell Landing site. The Final Cleanup Action Plan (FCAP) is now available on the Bothell Landing Cleanup website: <https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=3013>.

The site is generally located at the intersection of Woodinville Drive / SR 522 and Bothell Way NE/ former SR 527, in Bothell, Washington. The city acquired properties on which the site lies in 2008 for construction of the SR 522 realignment. A strip mall, restaurants, and historic gas stations with multiple abandoned petroleum underground storage tanks (USTs) formerly occupied the site.

Five USTs were removed during construction of the park in 1998. Chlorinated solvents (chemicals commonly associated with dry cleaners) were found in groundwater. These came from the Ultra Custom Care Cleaners site, which is being cleaned up separately. Interim action soil cleanups of petroleum hydrocarbons were conducted in 2010, 2013, 2014, 2015, and 2017.

Chemicals of concern remaining after the interim action soil cleanups are:

- In soil: Gasoline range petroleum hydrocarbons and benzene
- In groundwater: Arsenic

The selected remedy in the FCAP is a combination of excavation of contaminated soils (already completed as interim actions), engineering controls (capping under roadway), institutional controls (including property environmental covenants) restricting access to soil and groundwater, and compliance groundwater monitoring

For questions about the site, contact: Jerome Cruz

3190 160th Ave SE

Bellevue, WA 98008

jerome.cruz@ecy.wa.gov or 425-649-7094

Bothell Former Hertz

Facility Site ID# 11687976 Cleanup Site ID# 7906

18030 Bothell Way NE, Bothell

Final Cleanup Action Plan available

Ecology and the City of Bothell have entered into an agreement called an Agreed Order, which requires the city to clean up the Bothell Former Hertz Site. The Final Cleanup Action Plan (FCAP) is now available on the Bothell Former Hertz Cleanup website: <https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=7906>.

The site is generally located on both sides of the newly constructed SR 522 roadway, between Bothell Way NE and 98th Avenue NE / NE 180th Street, in Bothell, Washington. A Hertz Rentals facility with an office, warehouse and shop building, smaller buildings, and asphalt-paved parking and storage formerly occupied the site.

Site Register

During removal of USTs in 1993, petroleum contaminated soils were found to extend underneath the former buildings. Chlorinated solvents (chemicals commonly associated with dry cleaners) were found in groundwater. These came from the Bothell Service Center Simon & Son Cleanup site, which is being cleaned up separately. Interim action soil cleanups were conducted in 2010, 2012, and 2013.

Chemicals of concern remaining in groundwater after the interim action cleanups are:

- Total petroleum hydrocarbons (gasoline, diesel and motor oil range)
- Arsenic
- Halogenated volatile organic compounds (HVOCs), from the adjacent Bothell Service Center Simon & Son dry cleaning site, which is a separate state cleanup site.

The selected remedy in the FCAP is a combination of: excavation of contaminated soils (already completed as interim actions), institutional controls (including property environmental covenants) restricting access to soil and groundwater, and monitoring the natural attenuation (decay) of contaminants in groundwater to achieve compliance.

SPOKANE COUNTY

BNSF Railway Black Tank Property Site
3202 East Wellesley, Spokane

Facility Site ID# 98615712 Cleanup Site ID# 3243

Public comment period: 6/4/18 – 7/3/18

Draft Amended Agreed Order and State Environmental Policy Act (SEPA) Documents Available for Public Review and Comment

Ecology invites you to review and comment on the draft amended Agreed Order and SEPA documents for the BNSF Railway Black Tank Property site. The site covers roughly 18 acres in Spokane's Hillyard neighborhood and is near the proposed path of the North Spokane Corridor freeway.

The amendment requires the parties responsible to excavate the top 15 feet of five areas of soil contamination and dispose it off-site before the final cleanup plan is complete. This interim cleanup action is necessary to keep North Spokane Corridor construction on schedule.

Ecology will review and respond to the comments we receive during the public review period. We will publish our responses online and send them to the people who commented. We will hold a public meeting if 10 people request one.

THURSTON COUNTY

East Bay Redevelopment Site

Facility Site ID# 5785176 Cleanup Site ID# 407

315 Jefferson Street NE, Olympia

Public Comment Period: 5/10/2018 – 6/25/2018

Engineering Design Report Received

Ecology received the revised Engineering Design Report for Lot 11 of the East Bay Redevelopment Site on May 31. This document is currently under review. Cleanup at the site previously occurred in 2017. However, additional remedial actions are necessary because of planned new development that will disturb the existing cap that provides protection from contact with underlying contaminated soil. The purpose of the additional remedial action is to: remove soil contamination that exceeds MTCA Remediation Levels, install hardscape surface cover (i.e., buildings, parking areas, roads, sidewalks, or other paved outdoor area) and softscape surface cover on portions of the Site that exceed MTCA Cleanup Levels, and implement and maintain institutional controls using an environmental covenant. Cleanup construction will likely begin in mid-June 2018.

Historic timber-related industries caused soil and groundwater contamination. Total petroleum hydrocarbons (TPHs), carcinogenic polycyclic aromatic hydrocarbons, dioxins and furans, total naphthalenes, and metals were detected above state cleanup levels in soil. Investigations also revealed TPHs and arsenic in groundwater above state cleanup levels or screening levels. However, after partial cleanup, groundwater is no longer contaminated.

Steve Teel, site manager

WHATCOM COUNTY

Chevron 90619 cleanup site

Facility Site ID# 35363194 Cleanup Site ID# 8836

1205 Washington St, Bellingham

Public Comment Period: 5/29/2018 – 6/27/2018

Draft Agreed Order Available for Public Review and Comment

Ecology is working with current and historical site operators to clean up contamination at this former gasoline service station site. Ecology, Chevron Environmental Management Company, and Shell Oil Products will enter into a formal legal agreement called an Agreed Order to study the extent of contamination and develop a plan to clean it up.

Once final, the order will require operators to:

- Describe the types and extent of contamination, and weigh cleanup options through an environmental report for the property;
- Choose cleanup methods through a draft cleanup action plan;
- If needed, conduct a partial cleanup before the final cleanup plan is complete. This is called an interim action, and can occur throughout the cleanup process. If an interim action is done, we will require a separate comment period.

YAKIMA COUNTY

Ultra Yield Micronutrients (formerly known as Bay Zinc Inc)

Facility Site ID# 17964725 Cleanup Site ID# 4444

213 W Moxee Ave, Moxee

Public Comment Period: 5/10/2018 – 6/25/2018

Draft Cleanup Documents Available for Public Comment

Several draft documents are available for public review and comment. These documents provide a path forward to address contamination at the Ultra Yield Micronutrients facility, a fertilizer plant in Moxee.

Site Register

Draft documents for review include:

- A legal agreement, called an Agreed Order that provides an overview of the site and the cleanup work to be done.
- A 2018 Corrective Action Plan that outlines steps to be taken to address contamination.
- A dangerous waste permit for corrective action.
- A public participation plan that outlines how Ecology will inform the public about this site.

Past practices and spills at the facility released hazardous substances to the soil and groundwater. Soil is contaminated with lead, cadmium, and zinc. Groundwater is contaminated with sulfate, chloride, manganese, cadmium, and zinc. Extensive cleanup activities were completed between 1988 and 2005. However, a limited amount of contaminated soil was left in place on-site, and groundwater beneath the facility remains contaminated.

Ultra Yield and Mr. Camp are now named as permittees in the legal documents. To make sure they comply with our cleanup laws, we are revising old cleanup documents and emphasizing the cleanup work that needs to continue. Ecology believes it is in the public interest that the permittees follow the environmental covenant and continue to monitor groundwater.

You can [view the documents online](#) and [comment using our online comment form](#).

GLOSSARY

Agreed order - A legal agreement with Ecology to make sure the cleanup meets the standards of Washington State's cleanup law, the Model Toxics Control Act (MTCA).

Cleanup action plan (CAP) - A document that describes the selected cleanup method(s) and specifies cleanup standards and other requirements. It is based on information and technical analyses generated during the RI/FS and consideration of public comments and community concerns. A draft of the CAP (DCAP) is made available for public review and comment before finalizing.

Comment period - A time period during which the public can review and comment on various documents and Ecology or EPA actions. For example, a comment period is provided to allow community members to review and comment on proposed cleanup action alternatives and proposed plans. Also, a comment period is held to allow community members to review and comment on draft feasibility studies.

Consent decree - A formal legal agreement that is filed with a court. It describes studies and/or cleanup work to be done at a site and the terms under which that work is to be done.

Engineering design report - Engineering design reports outline the specific details for implementation and operation of the first phase of the cleanup actions.

ERTS - Environmental Report Tracking System

Five-year periodic review - A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.

Formal cleanups - TCP conducts or supervises formal cleanups (also called formal oversight) when site owners are under court order or decree, or when cleanups are funded by legislative initiatives. Formal cleanups will meet MTCA standards. The public can provide input during public meetings and comment periods.

Hazardous Sites List - A statewide list of contaminated properties. Ecology may remove a site from the list only after determining that all remedial actions except confirmatory monitoring have been completed and compliance with the cleanup standards has been achieved at the site, or the listing was erroneous.

Independent cleanups - Property owners conduct independent cleanups on their own, or with help from our Voluntary Cleanup Program (VCP). Independent cleanups still meet MTCA standards, but property owners set their own timelines. Owners can ask for our help through the VCP but do not have to. They only need to hold public meetings or comment periods if a site needs to be de-listed.

Independent cleanup action - Any remedial action without department oversight or approval and not under an order or decree.

Site Register

LUST - Leaking Underground Storage Tank

NFA - No Further Action

Public participation plan - Outlines and describes the tools Ecology will use to inform the public about site activities, and it identifies opportunities for the community to become involved in this process.

PSI - Puget Sound Initiative

RCW - Revised Code of Washington

Remedial action - Construction work done to clean up a contaminated site.

Remedial investigation/feasibility study - Two distinct but related studies. They are usually performed at the same time, and together referred to as the "RI/FS."

RI/FS - See Remedial Investigation/Feasibility Study

SEPA - State Environmental Policy Act

Site Hazard Assessment (SHA) - An assessment to gather information about a site to confirm whether a release of hazardous substances has occurred and to enable Ecology to evaluate the relative potential hazard posed by the release.

TCP - Ecology's Toxics Cleanup Program

Total petroleum hydrocarbons (TPH) - A term used to describe a large family of several hundred chemical compounds that originally come from crude oil. TPH is a mixture of chemicals made mainly from hydrogen and carbon.

UXO - Unexploded Ordnance

Voluntary Cleanup Program (VCP) - The VCP is one of several options for cleaning up a hazardous waste site under the state's cleanup law. Under this option, property owners may perform a cleanup independently and request services from Ecology for a fee.

WAC - Washington Administrative Code

WARM, Washington Ranking Method - The method used to rank sites placed on the Hazardous Sites List.
