Executive Summary

Purpose

In accordance with the requirements described in 40 C.F.R. Part 58.10, Ecology reviews its ambient air monitoring network each year to ensure that it collects adequate, representative, and useful air quality data on which to base policy decisions. This report summarizes the results of the 2019 review. The annual review process includes:

- Documenting Ecology's ambient air quality monitoring needs, goals and priorities;
- Identifying modifications to Ecology's ambient air monitoring network since the previous annual network plan; and
- Identifying proposed modifications to the network in the upcoming 18 months.

Network modifications

Recent modifications

NO₂ (42602)

The NO₂ monitoring at the temporary Quincy Special Purpose Monitoring Site (SPMS) was discontinued on September 30, 2018. The site will be retained as a meteorological and nephelometer monitoring site until at least December 2020.

PM_{2.5} (88101)

A collocated Met One BAM 1020 was added to the Tacoma-S 36th monitoring site (530530024) on March 2, 2019.

As approved by EPA on December 13, 2018, the Lynnwood-212th St site (530610005) operated by the Puget Sound Clean Air Agency (PSCAA) was discontinued on December 31, 2018. The state support and PM_{2.5} grant funding were redirected to a new site established by PSCAA at Auburn-M St (530330089). Monitoring at Auburn began on January 1, 2019.

Nephelometer PM_{2.5} (88502)

The temporary nephelometer monitoring study at Quincy (530251003) was extended until December 2020.

The temporary Okanogan nephelometer SPMS (530470004) was discontinued in June 2018.

Two temporary nephelometer SPMS were established. The Friday Harbor site (530550001) operated from January-May 2019. The White Salmon site was established in June 2018 and will operate indefinitely.

Planned modifications

PM_{2.5} (88101)

Ecology is currently evaluating potential locations for a second PM_{2.5} monitoring site in the Spokane-Spokane Valley Metropolitan Statistical Area (MSA) and plans to establish a second site by January 1, 2020. The addition of this site will fulfill the minimum monitoring requirements for PM_{2.5} described in 40 C.F.R. Part 58 Appendix D.

Chemical Speciation Network (CSN)

In the 2018 Annual Network Plan (ANP), Ecology proposed to relocate the Tacoma-L St (530530029) speciation monitor to the Tacoma-S 36th St (530530024) near-road monitoring site. However, since submission of the 2018 ANP, operational challenges to speciation data collection have grown at the Seattle-10th and Weller monitoring site (530330030). As these challenges are more urgent than the pending Tacoma relocation, Ecology delayed the relocation of the Tacoma site to evaluate alternate potential locations for Seattle-10th and Weller speciation monitoring. Ecology hopes to relocate the speciation monitoring equipment from Seattle-10th and Weller to a site in Central Washington but has not yet identified operational resources for this relocation. Ecology will continue to pursue alternatives to speciation monitoring at Seattle-10th and Weller in other high-PM_{2.5} areas of the state and will revisit relocation of the Tacoma site at a later date.

Photochemical Assessment Monitoring Stations (PAMS)

Based on 40 C.F.R. Part 58, Appendix D, state air monitoring agencies are required to begin making PAMS measurements at their NCore location(s) by June 1, 2019. The equipment needed to measure PAMS parameters were to be purchased by EPA using a nationally negotiated contract and delivered to the monitoring agencies. EPA has announced that due to contract delays, the necessary equipment will not be delivered in time to begin making PAMS measurements by June 1, 2019. EPA has indicated that it is working on a proposed rule to extend the start date of PAMS measurements and expects that this proposed rule change will be signed by June 1, 2019. As a result of the delay, Ecology will not begin making PAMS measurements at the Seattle-Beacon Hill NCore location in 2019, and will work with EPA to begin measurements on or before the final revised start date for this network.

Introduction

This document summarizes Ecology's annual review of the Washington Ambient Air Monitoring Network (Washington Network) in accordance with 40 C.F.R. Part 58.10.

EPA's ambient air quality surveillance regulations in 40 C.F.R. Part 58 require states to establish air quality surveillance systems in their State Implementation Plans (SIPs). An air quality surveillance system consists of a network of State and Local Air Monitoring Stations (SLAMS). These stations measure ambient concentrations of those air pollutants for which 40 C.F.R. Part 50 sets standards. SLAMS must meet the requirements of 40 C.F.R. Part 58 contained in:

- Appendix A (Quality Assurance Requirements)
- Appendix C (Ambient Air Quality Monitoring Methodology)
- Appendix D (Network Design Criteria)
- Appendix E (Probe and Path Siting Criteria)

States determine if they conform to Appendices A and C in part through periodic system and performance audits. States conform to Appendices D and E by conducting an annual network review of their air quality surveillance systems. This review is documented in an annual network plan that meets the following requirements:

- The plan describes any network modifications planned in the upcoming 18 months. Network modifications are subject to approval of the EPA Regional Administrator.
- For each existing and proposed monitoring site, the plan includes the following information:
 - The AQS site number
 - Geographic information, including street address, geographic coordinates, and the represented MSA, CBSA, CSA or other area
 - The monitoring objective, special scale, sampling and analysis method, and operating schedule for each monitor
- The plan outlines the state's approach to implementing PAMS monitoring requirements where required at National Core (NCore) network sites by June 1, 2019.
- The plan must be made available for public inspection and comment for at least 30 days prior to submission to the EPA. The final plan includes and addresses comments received through the public notification process.

Background Information

Monitoring Objectives

The Washington Network was designed to meet the three monitoring objectives defined in 40 C.F.R. Part 58 Appendix D:

- 1. Provide air pollution data to the public in a timely manner.** Ecology provides timely air quality data to the public in a variety of ways, including:
 - Near-real-time data are available on Ecology's monitoring website.
 - Ecology conducts public outreach and issues alerts and bulletins when air quality is compromised.
- 2. Support compliance with National Ambient Air Quality Standards (NAAQS) and development of pollution control strategies.** Ambient air quality data are used to:
 - Determine compliance with the NAAQS
 - Determine the location of maximum pollutant concentrations
 - Track the progress of SIPs
 - Determine the effectiveness of air pollution control programs
 - Develop responsible and cost-effective emission control strategies
 - Assist with permitting work
- 3. Support air pollution research.** Ecology and its partners use ambient air quality data to improve our understanding of air pollution and its consequences. Research applications of air quality include:
 - Improving air quality forecasting
 - Evaluating the effects of air pollution on public health
 - Informing dispersion models
 - Identifying air quality trends and emerging pollution issues
 - Analyzing pollution episodes

In order to meet these three objectives, 40 C.F.R. Part 58 Appendix D calls for the design of SLAMS networks to include several different types of monitors. These general types are sites that:

1. Determine the highest pollutant concentrations expected in the area covered by the network.
2. Determine representative pollutant concentrations in areas of high population density.
3. Determine the impact of significant sources or source categories on pollutant concentrations in the ambient air.
4. Determine general background pollutant concentrations.

5. Determine the regional extent of pollutant transport between populated areas.
6. Determine the impacts on visibility or vegetation (welfare impacts) in more rural and remote areas.

Appendix D also provides guidance on spatial scales of representativeness for stations in a SLAMS network. Ideally, the station is located so that its sample represents the air quality across the scale that the station is intended to represent. Appendix D defines the following spatial scales:

1. **Microscale:** Area dimensions between several and 100 meters.
2. **Middle scale:** Areas between 100 and 500 meters, typically several city blocks.
3. **Neighborhood scale:** Areas between 0.5 and 4 kilometers with relatively uniform land use.
4. **Urban scale:** Areas with city-like dimensions between 4 and 50 kilometers. Urban and neighborhood scales can overlap considerably. Heterogeneous urban areas may not have a single representative site.
5. **Regional scale:** Areas from tens to hundreds of kilometers with relatively homogeneous geography and no large sources.
6. **National and global scales:** Scales representing the nation or globe as a whole.

Table 1 summarizes the appropriate spatial scales for each criteria pollutant and applicable site types.

Table 1. Summary of applicable spatial scales for criteria pollutants and monitoring objectives

Scale	SO ₂	CO	O ₃	NO ₂	Pb	PM ₁₀	PM _{2.5}	Site Types
Micro	✓	✓		✓	✓		✓	Highest concentration; source impact
Middle	✓	✓		✓	✓	✓	✓	Highest concentration; source impact
Neighborhood	✓	✓	✓	✓	✓	✓	✓	Highest concentration; population; source impact; general/background
Urban	✓		✓	✓			✓	Highest concentration; population; general/background; regional transport; welfare-related impacts
Regional	✓		✓				✓	General/background; regional transport; welfare-related impacts

Other ambient monitoring data needs

In addition to its network of criteria pollutant monitoring sites, Ecology also uses nephelometers throughout Washington to estimate PM_{2.5} concentrations and inform the public of air quality conditions in communities where criteria pollutant monitoring is not required. Typically, nephelometer monitoring sites use site-specific PM_{2.5} correlations developed from collocated Federal Reference Method (FRM) or Federal Equivalent Method (FEM) monitor data. Lower concentration sites may use generalized regional correlations developed at sites with similar geographic and source characteristics. These sites are operated in accordance with 40 C.F.R. Part 58 Appendix A requirements for quality assurance and quality control. At nephelometer sites where PM_{2.5} concentrations are consistently measured at or greater than 80 percent of the NAAQS, Ecology transitions to FEM monitoring.

Network Evaluation

Ecology uses a variety of tools to evaluate how well its monitoring network is meeting these goals and objectives. These tools include:

- EPA minimum monitoring requirements in 40 C.F.R. Part 58 Appendix D
- Results of Ecology's most recent 5-year Ambient Air Quality Monitoring Network Assessment
- Analyses of historic monitoring data
- Census data on population density and demographics
- Dispersion and air quality forecast models
- Planning requirements, including SIPs and maintenance plans
- Jurisdictional boundaries
- Results of special monitoring studies

The suitability of individual monitoring sites is evaluated according to the probe and monitoring path siting criteria described in 40 C.F.R. Part 58 Appendix E.

Washington Core-Based Statistical Areas

The minimum monitoring requirements listed in 40 C.F.R. Part 58 Appendix D are based on the core-based statistical areas (CBSAs) defined by the U.S. Office of Management and Budget. Washington's CBSAs are shown in the map in Figure 1 (U.S. Census Bureau, 2013). Note that since publication of this map, Pend Oreille County has been removed from the Spokane-Spokane Valley MSA. Population estimates throughout this document are based on the latest available census figures in these CBSAs (2018 Annual Estimates of the Resident Population, U.S. Census Bureau, 2019). The populations of CBSAs in Washington over 50,000 people are listed in Table 2.

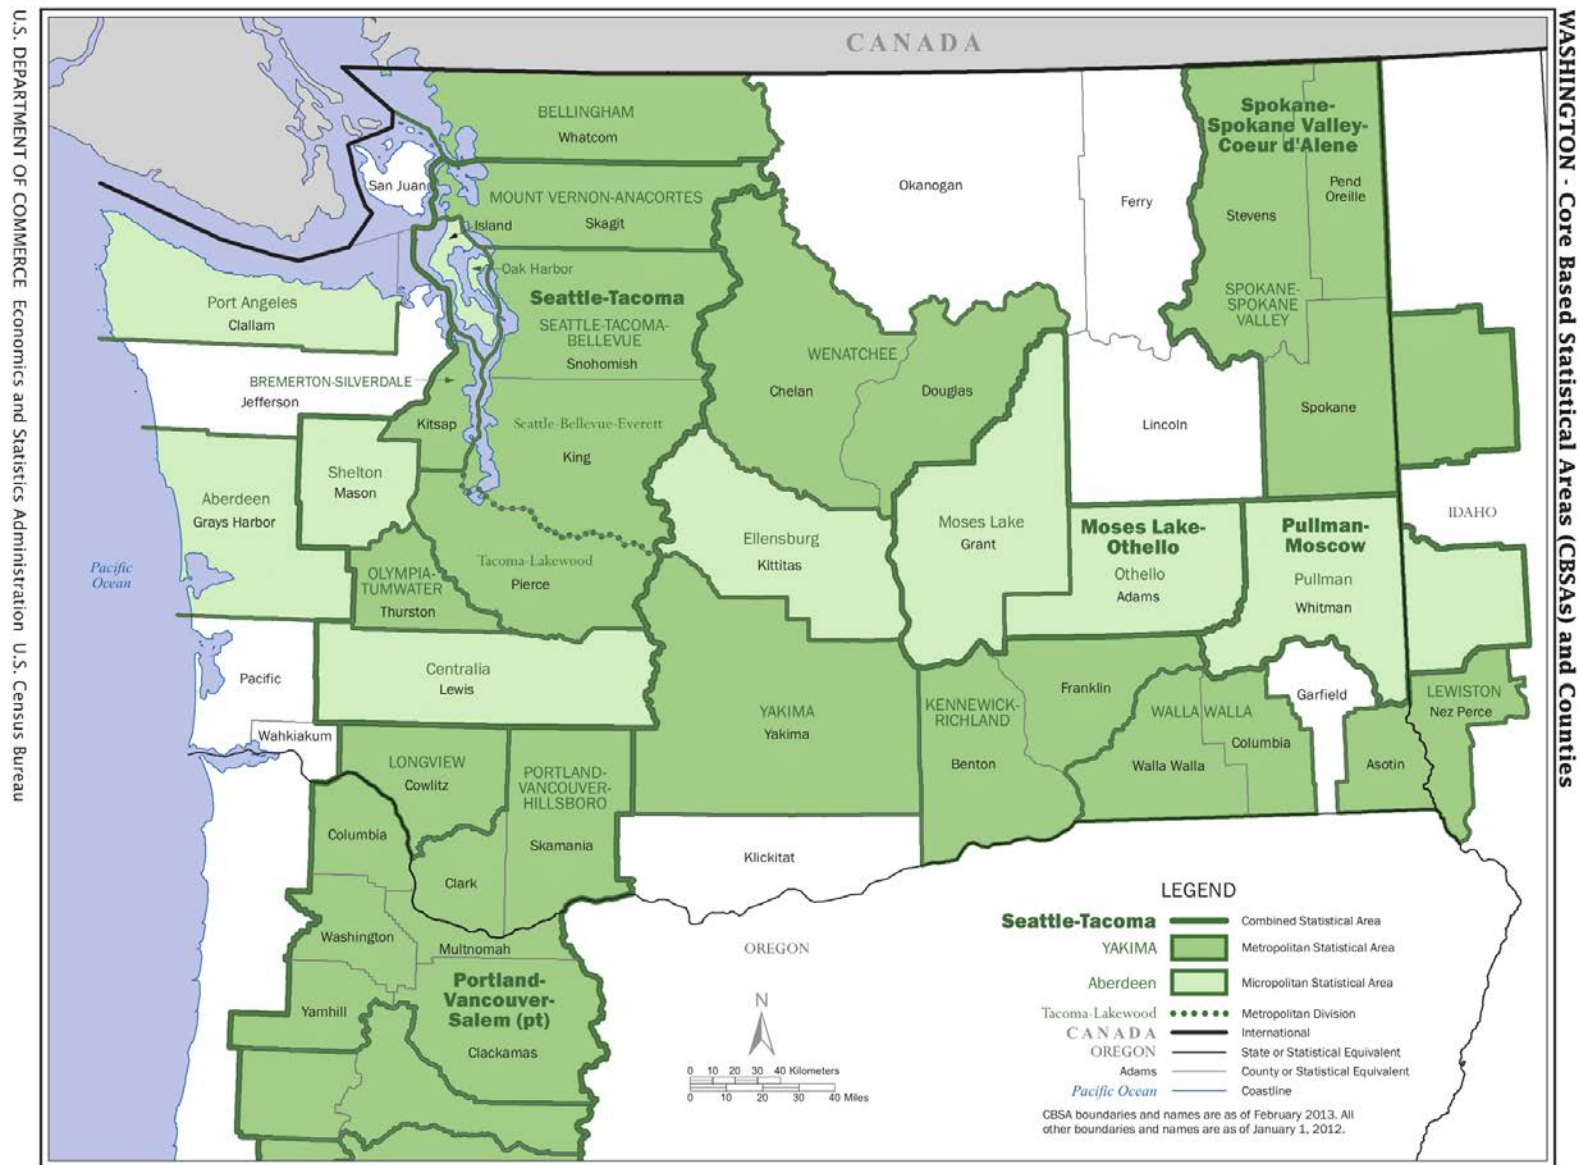

Figure 1. Washington's Core-Based Statistical Areas (CBSAs), U.S. Census Bureau 2013

Table 2. Washington's CBSA populations over 50,000 (U.S. Census Bureau)

Core-Based Statistical Area	2018 Population
Seattle-Tacoma-Bellevue, WA	3,939,363
Portland-Vancouver-Hillsboro, OR-WA	2,478,810
Spokane-Spokane Valley, WA	573,493
Kennewick-Richland, WA	296,224
Olympia-Lacey-Tumwater, WA	286,419
Bremerton-Silverdale-Port Orchard, WA	269,805
Yakima, WA	251,446
Bellingham, WA	225,685
Mount Vernon-Anacortes, WA	128,206
Wenatchee, WA	119,943
Longview, WA	108,987
Moses Lake, WA	97,331
Oak Harbor, WA	84,460
Centralia, WA	79,604
Port Angeles, WA	76,737
Aberdeen, WA	73,901
Shelton, WA	65,507
Walla Walla, WA	64,981
Lewiston, ID-WA	63,018

Washington shares the Portland-Vancouver-Hillsboro CBSA with the state of Oregon. The minimum monitoring requirements for PM₁₀, PM_{2.5} and ozone in this CBSA are met through a combination of monitors operated by Ecology and the Oregon Department of Environmental Quality (DEQ). Ecology and Oregon DEQ established a Memorandum of Understanding on May 20, 2019 to formalize this arrangement (Appendix E).

Maintenance Areas

Washington has ten maintenance areas for criteria pollutants. Maintenance areas demonstrate continued attainment of the NAAQS either through monitoring or through EPA-approved alternate methods. These methods are summarized in Table 3.

Table 3. Washington PM₁₀ maintenance areas and methods of demonstrating NAAQS attainment

Maintenance Area (Pollutant)	End of Maintenance Period	NAAQS Attainment Method
Seattle (PM ₁₀)	5/14/2021	Estimated PM ₁₀ from Seattle-Duwamish PM _{2.5} (530330057)
Kent (PM ₁₀)	5/14/2021	Estimated PM ₁₀ from Kent-Central & James PM _{2.5} (530332004)

Maintenance Area (Pollutant)	End of Maintenance Period	NAAQS Attainment Method
Tacoma (PM ₁₀)	5/14/2021	Estimated PM ₁₀ from Tacoma-Alexander nephelometer PM _{2.5} (530530031)
Thurston County (PM ₁₀)	12/4/2020	Estimated PM ₁₀ from Lacey-College St nephelometer PM _{2.5} (530670013)
Wallula (PM ₁₀)	9/26/2025	Burbank-Maple St PM ₁₀ monitor (530710006)
Spokane (PM ₁₀)	8/30/2025	Spokane-Augusta PM ₁₀ monitor (530630021)
Yakima (PM ₁₀)	3/10/2025	Yakima-4 th Ave S PM ₁₀ monitor (530770009)
Tacoma (PM _{2.5})	3/12/2035	Tacoma-L St PM _{2.5} monitor (530530029)
Yakima (CO)	12/31/2022	Modeled CO vehicle emissions
Spokane (CO)	8/30/2025	Modeled onroad, nonroad and residential wood combustion CO emissions

Washington has several maintenance areas that fall within the jurisdiction of local air agencies. In accordance with the maintenance plans, the local air agencies submitted design values to Ecology for the maintenance areas in their jurisdiction. These design values and their underlying calculations can be found in the document “Verification of Continued Attainment in Limited Maintenance Areas (2019)” submitted concurrently with this plan.

Monitoring Network Design

On January 1, 2019, Ecology and its partners operated 75 monitoring sites that were part of the Washington Network. Those sites are shown on the map in Figure 2, and the parameters monitored are summarized in Table 4. Detailed site information is provided in Appendix D. All monitoring sites described in this plan are operated under the Ecology Primary Quality Assurance Organization (PQAO). Other monitoring sites, such as IMPROVE sites, are operated in Washington as part of separate PQAOs, but those networks are outside the scope of this document.

In its response to Washington's 2018 Annual Air Monitoring Network Plan, EPA requested that Ecology update the Annual Average Daily Traffic (AADT) counts and roadway distances for each monitoring site. Appendix D includes updated roadway distances and the latest available AADT counts. These values have also been updated in AQS.

Figure 2. Map of all Washington Network monitoring sites.

Carbon monoxide (CO, 42101)

There are three CO monitoring sites in the Washington Network. All Washington Network CO monitoring sites collect data under method code 593 (Teledyne API 300 EU). For detailed site and monitor information, see Appendix D.

Table 5. Washington Network CO monitoring sites

AQS ID	Site Name	Established	Type	Scale

530330080	Seattle-Beacon Hill	03/2007	SLAMS, NCore	Urban

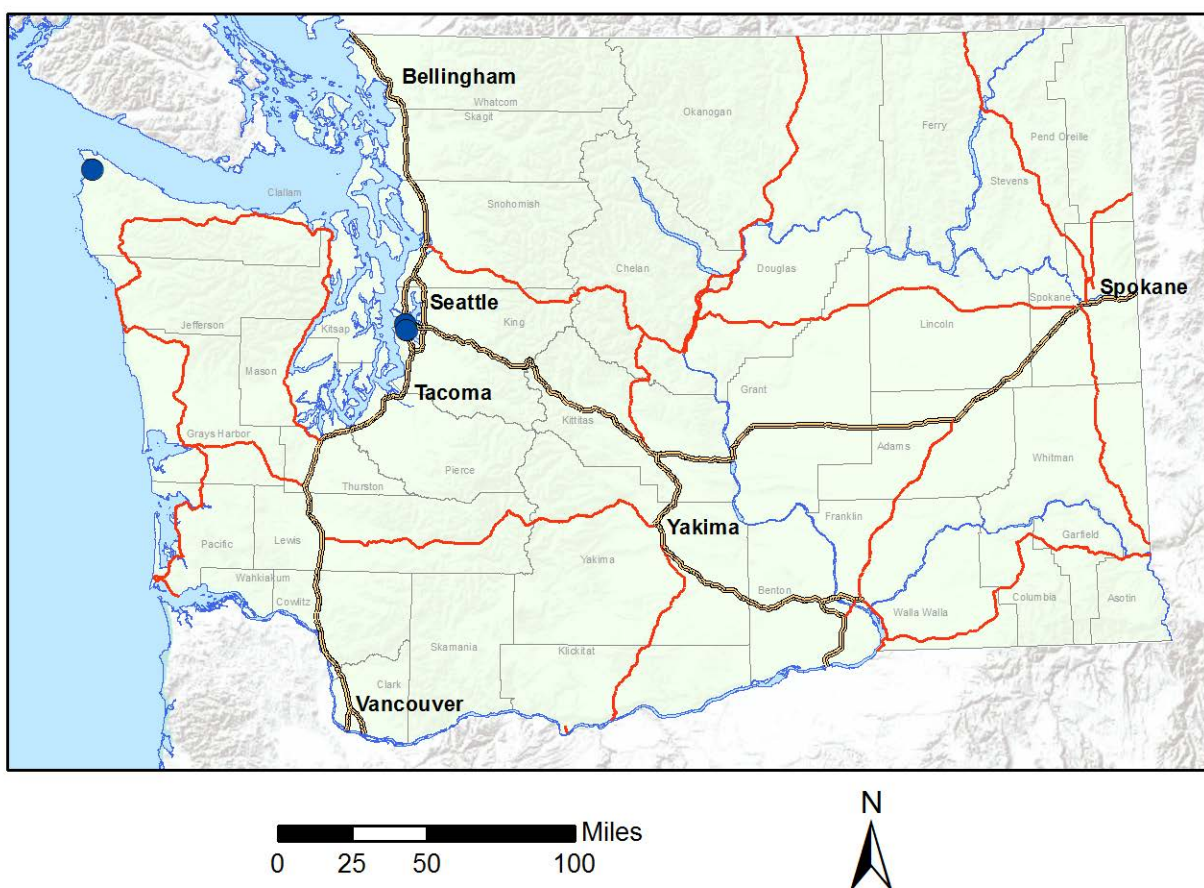

Figure 3. Map of Washington Network CO monitoring sites

Minimum monitoring requirements

Ecology is required to operate a CO monitor collocated with one required near-road NO₂ monitor in CBSAs with a population of 1,000,000 or more. In the Seattle-Tacoma-Bellevue MSA, this requirement is met at the Seattle-10th & Weller near-road monitoring site (530330030).

Recommended/proposed modifications: None.

Nitrogen dioxide (NO₂, 42602/42612)

There are three NO₂ (42602) monitoring sites in the Washington Network and two sites that monitor trace NO_y-NO (42612). Seattle-Beacon Hill monitors both area-wide NO₂ and trace NO_y-NO. For detailed site and monitor information, see Appendix D.

Table 6. Washington Network NO₂ and Trace NO_y-NO monitoring sites

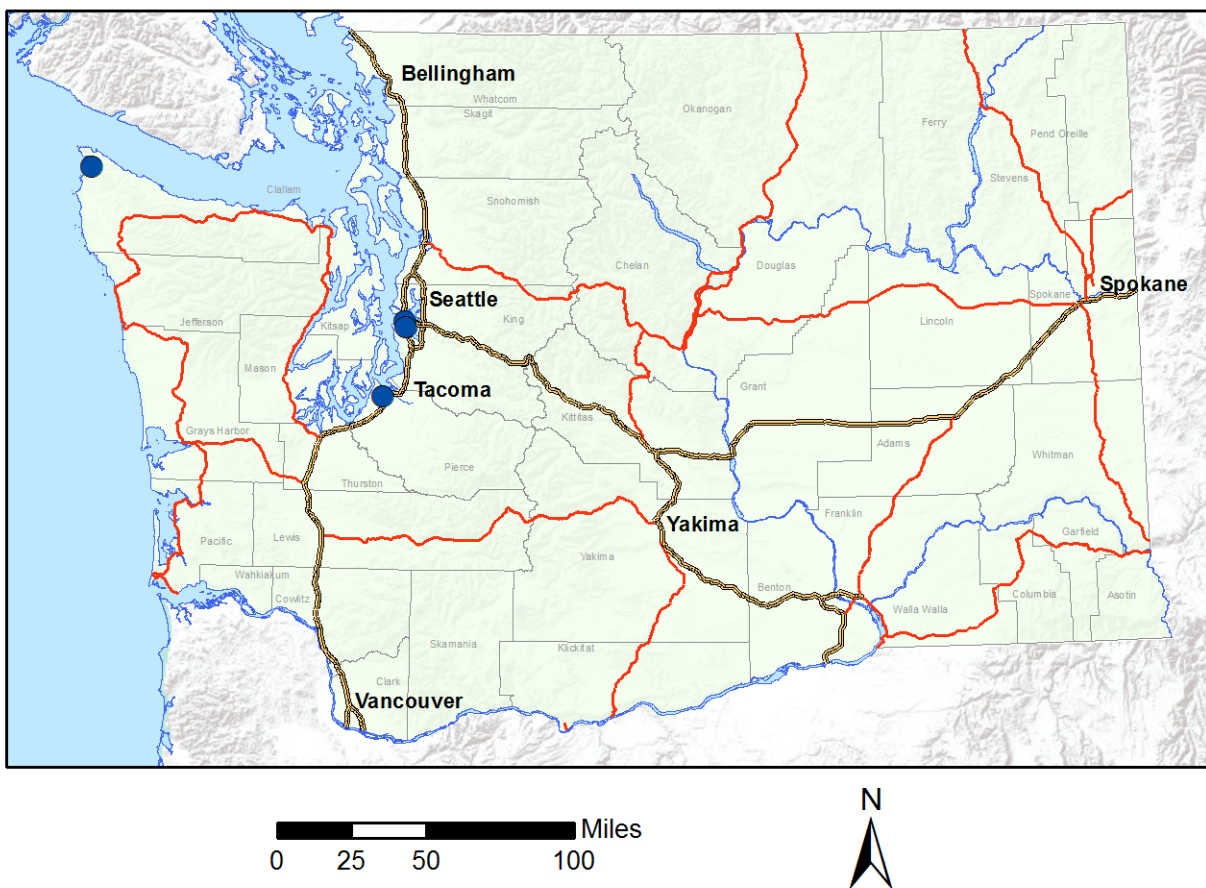

Figure 4. Map of Washington Network NO₂ and Trace NO_y-NO monitoring sites

Minimum monitoring requirements

Ecology is required to monitor both near-road and area-wide NO₂ in each CBSA with a population of 1,000,000 or greater. In CBSAs with a population of 2,500,000 or more, two near-road NO₂ monitoring sites are required. Ecology fulfills the near-road monitoring requirements at the Seattle-10th & Weller (530330030) and Tacoma-S 36th St (530530024) near-road sites. Seattle-Beacon Hill (530330080) fulfills the requirement for area-wide NO₂ monitoring.

Ozone (O₃, 44201)

There are 13 ozone monitoring sites in the Washington Network. All Washington Network ozone sites collect data under method code 087 (UV Absorbance) using Teledyne API 400 analyzers. For detailed site and monitor information, see Appendix D.

Table 7. Washington Network ozone monitoring sites

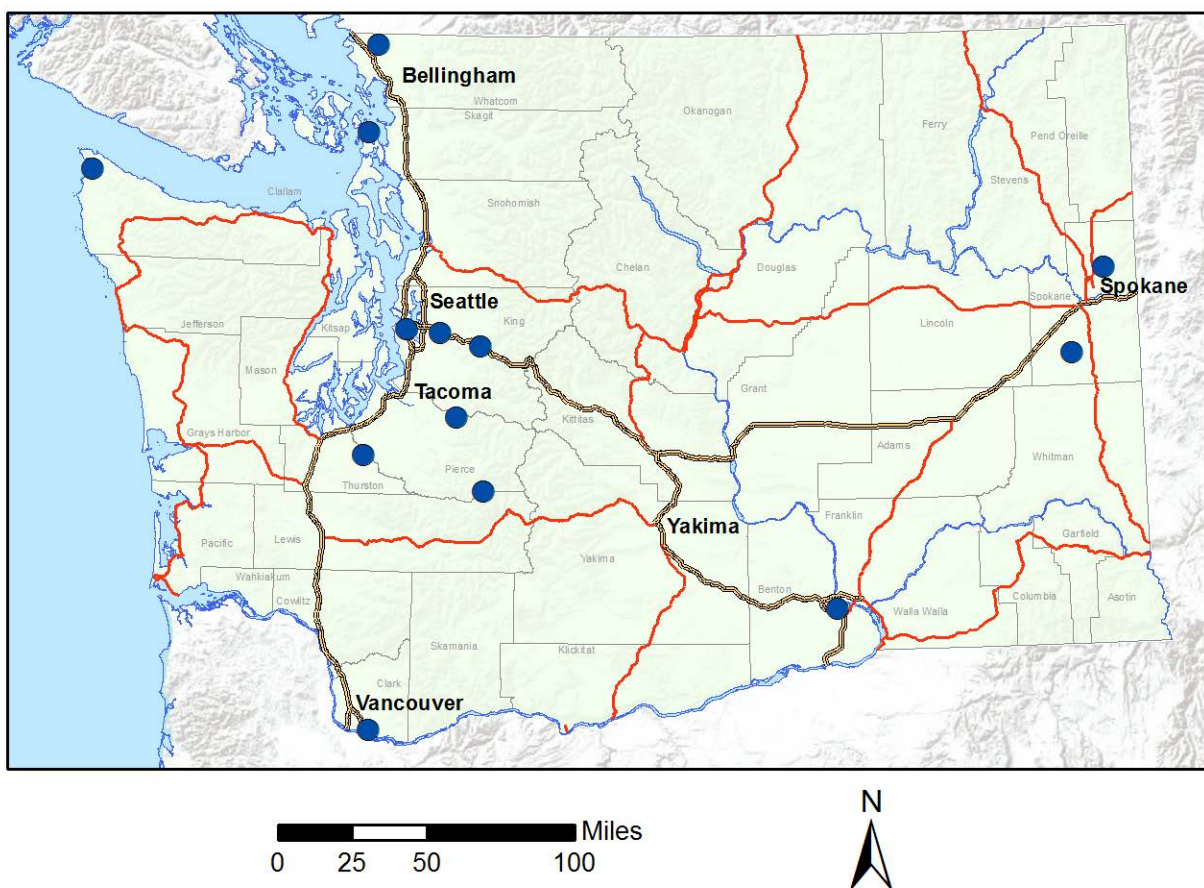

Figure 5. Map of Washington Network ozone monitoring sites

Minimum monitoring requirements

The Washington Network meets the minimum monitoring requirements for ozone defined in 40 C.F.R. Part 58 Appendix D. In each CBSA, the number of existing ozone monitors exceeds the number of required monitors, as summarized in Table 8. The design values listed are the maximum valid design value of all sites within the CBSA. For a full list of design values at all ozone sites in the Washington Network, see Appendix A.

Table 8. EPA minimum monitoring requirements for ozone

CBSA	2018 Population Estimate	2018 Design Value (ppm)	Number of Required Monitors	Number of Existing Monitors
Seattle-Tacoma-Bellevue, WA	3,939,363	0.077	2	5
Portland-Vancouver-Hillsboro, OR-WA	2,478,810	0.072	2	6
Spokane-Spokane Valley, WA	573,493	0.065	2	2
Kennewick-Richland, WA	296,224	0.071	1	1

CBSA	2018 Population Estimate	2018 Design Value (ppm)	Number of Required Monitors	Number of Existing Monitors
Olympia-Tumwater, WA	286,419	0.062	1	1
Bellingham, WA	225,685	0.052	0	1
Mount Vernon-Anacortes, WA	128,206	0.045	0	1
Port Angeles, WA	76,737	0.054	0	1

Washington shares the Portland-Vancouver-Hillsboro CBSA with the state of Oregon. The minimum monitoring requirements for ozone in this CBSA are met through a combination of monitors operated by Ecology and Oregon DEQ. Ecology and Oregon DEQ established a Memorandum of Understanding on May 20, 2019 to formalize this arrangement (Appendix E).

Recommended/proposed modifications: None.

Sulfur dioxide (SO₂, 42401)

There are six SO₂ monitoring sites in the Washington Network. For detailed site and monitor information, see Appendix D.

Table 9. Washington Network SO₂ monitoring sites

AQS ID	Site Name	Established	Type	Scale	Method

Bremerton-Silverdale-Port Orchard, WA	269,805	0	0	0
Yakima, WA	251,446	1.6	3	1

On April 2, 2019, Ecology submitted to EPA Region 10 a request for a waiver for the unmet minimum monitoring requirements. EPA issued Ecology a waiver for the unmet monitoring requirements in the Yakima and Kennewick-Richland MSAs on April 18, 2019. These waivers are provided in Appendix C. EPA is currently evaluating Ecology's request for monitoring waivers in the Seattle-Tacoma-Bellevue and Spokane-Spokane Valley MSAs.

Burbank site placement: In the 2018 Ambient Air Monitoring Network Plan, Ecology notified EPA of its intent to reclassify the Burbank PM₁₀ monitor a permanent SLAMS as of January 1, 2018. Ecology also requested that Burbank be designated the compliance monitor for the Wallula Maintenance Area (WMA) as of the same date. In its response to the 2018 Annual Network Plan, EPA Region 10 approved this change but encouraged Ecology to seek a PM₁₀ monitoring location closer to a dominant agricultural source further south in the WMA.

Ecology has historically conducted PM₁₀ monitoring closer to the agricultural source referenced by EPA. The compliance monitor for the WMA was located at Wallula Farm (530711001) from 1986 until 2003, at which time the land owner terminated the lease. Ecology contracted with Washington State University (WSU) to conduct a saturation study in 2001. Based on the results of this study and subsequent monitoring by Ecology at multiple sites in the WMA, Ecology determined that Burbank was the most suitable replacement site. EPA concurred with this assessment and approved relocation to the Burbank site in a letter dated November 4, 2004. This analysis and correspondence can be found in Appendix A of the Ecology publication "A Plan for Maintaining Particulate Matter (PM₁₀) Ambient Air Quality Standards in the Wallula PM₁₀ Maintenance Area."

The Burbank location was chosen as the most suitable location within the WMA for several reasons. First, Burbank is by far the most populous area in the WMA. As of the 2010 census, 63% of people living in the WMA lived in the town of Burbank. In contrast, the agricultural source referenced by EPA in its response letter is located in a sparsely populated area of private land southeast of Burbank. As of the 2010 census, the population density in the encompassing

block group was approximately 10 persons per square mile, relative to a population density of approximately 377 persons per square mile in Burbank. Source-oriented monitoring in this agricultural area would not be representative of population exposure.

The selection of Burbank as a neighborhood-scale site for population-oriented monitoring is consistent with the objectives of Ecology's ambient air monitoring network. In addition, there is a historical PM₁₀ monitoring record at Burbank from 2002 to 2011, which allows for comparisons between current and past monitoring data. Finally, as noted by EPA, the logistics of establishing and maintaining a long-term monitoring site in an area dominated by private land are exceedingly challenging. As the Burbank School District owns the property on which the Burbank site is located and is amenable to ongoing monitoring, Ecology anticipates that monitoring can continue uninterrupted at Burbank through the duration of the maintenance period.

In its August 13, 2018 response letter to the 2018 ANP, EPA Region 10 asserts that Burbank is not sited to capture impacts from agricultural sources in the WMA under prevailing wind conditions. However, an analysis of the meteorological data collected at the Burbank site from February 2018 – April 2019 shows that the dominant wind direction is from the east, followed by the southeast. As Burbank is located northwest of the source, Ecology maintains that it is well-sited to capture both population-oriented exposure and impacts downwind of nearby agricultural sources.

For the reasons stated above, Ecology has no plans to pursue source-oriented PM₁₀ monitoring elsewhere in the WMA.

Figure 8. Burbank-Maple St wind rose (February 2018 - April 2019)

Recommended/proposed modifications: None.

Particulate matter 2.5 (PM_{2.5}, 88101/88502)

FRM/FEM PM_{2.5} (88101)

There are 18 sites in the Washington Network that monitor PM_{2.5} with Class I or Class III FEM monitors. Sites operated with EPA funding through the Section 103 grant for PM_{2.5} are noted in the table below. For detailed site and monitor information, see Appendix D.

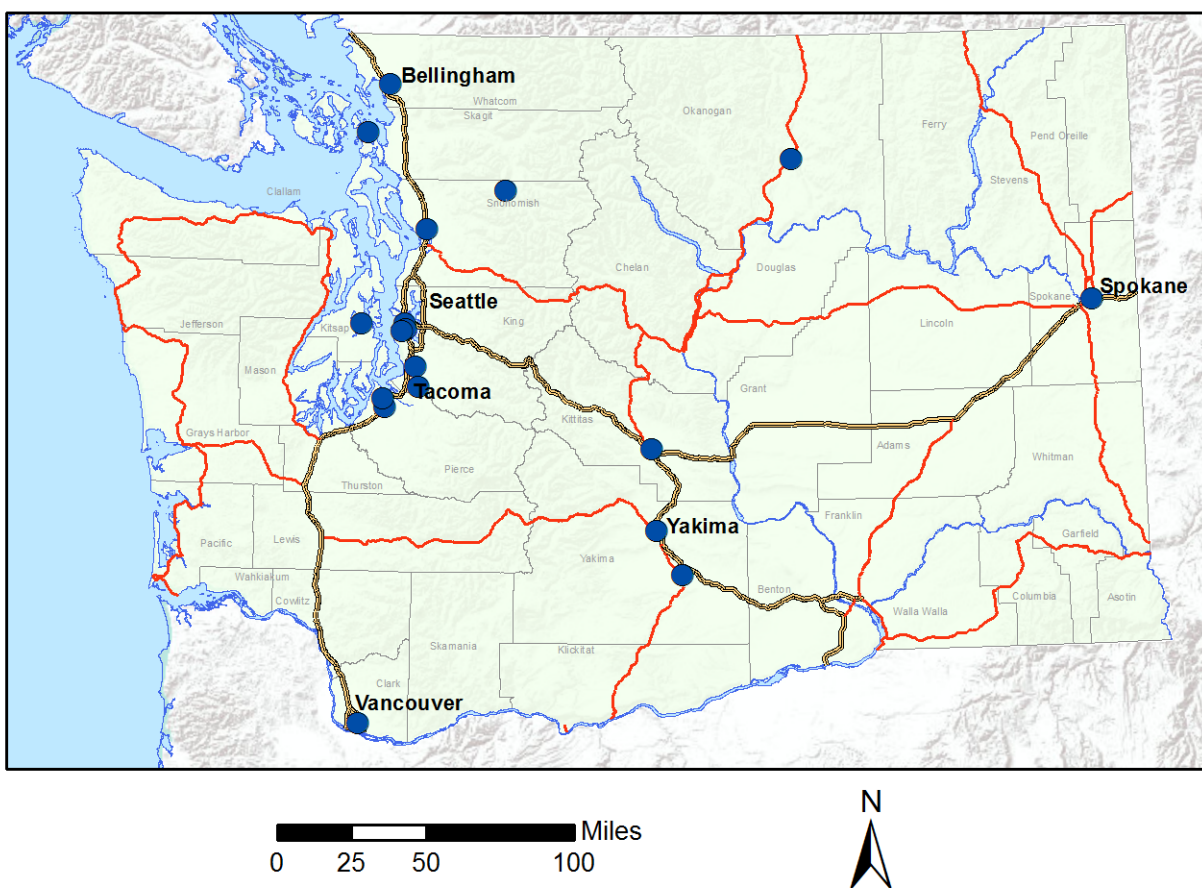

Figure 9. Map of Washington Network PM_{2.5} monitoring sites

Minimum monitoring requirements

Minimum monitoring requirements for PM_{2.5} are defined in 40 C.F.R. Part 58 Appendix D. Table 16 below summarizes the number of required and existing monitors in each of Washington's CBSAs where monitoring is conducted. The design values listed are the maximum valid design value of all sites within the CBSA. The Washington Network is currently meeting the minimum monitoring requirements in all CBSAs except Spokane-Spokane Valley. The 2018 design value at the Spokane-Augusta site (530630021) exceeded 85% of the PM_{2.5} NAAQS for the first time in over 10 years, as a result of the extensive wildfire smoke measured in 2017 and 2018. This increased the number of required monitors from one to two. Ecology is currently evaluating potential locations for a second PM_{2.5} monitoring site in the Spokane-Spokane Valley MSA and plans to establish a second site by January 1, 2020.

For a full list of design values at all Washington Network PM_{2.5} monitoring sites, see Appendix A.

Table 13. EPA minimum monitoring requirements for FRM/FEM PM_{2.5}

CBSA	2018 Population Estimate	2018 Design Value (µg/m³)	Number of Required Monitors	Number of Existing Monitors
Seattle-Tacoma-Bellevue, WA	3,939,363	39	3	9
Portland-Vancouver-Hillsboro, OR-WA	2,478,810	28	2	4
Spokane-Spokane Valley, WA	573,493	38	2	1
Bremerton-Silverdale, WA	269,805	19	0	1
Yakima, WA	251,446	47	1	2
Bellingham, WA	225,685	21	0	1
Mount Vernon-Anacortes, WA	128,206	18	0	1
Ellensburg, WA	47,364	40	0	1

Washington shares the Portland-Vancouver-Hillsboro CBSA with the state of Oregon. The minimum monitoring requirements for PM_{2.5} in this CBSA are met through a combination of monitors operated by Ecology and the Oregon DEQ. Ecology and Oregon DEQ established a Memorandum of Understanding on May 20, 2019 to formalize this arrangement (Appendix E).

Collocation requirements

The monitoring sites listed in Table are used to fulfill the collocation requirements described in 40 C.F.R. Part 58 Appendix A.

Table 14. PM_{2.5} collocation requirements

Method Code	# Primary Monitors	# Required Collocated Monitors	# Active Collocated Monitors	Site
145	1	1	1	Tacoma-L St (530530029)
170	17	3	2	Yakima-4 th Ave S (530770009); Tacoma-S 36 th (530530024)
181/581	1	1	1	Seattle-Beacon Hill (530330080)

The 8500 TEOM will be replaced with a BAM 1020 at Seattle-Beacon Hill (530330080) to fulfill the unmet collocation requirement for method code 170. All other PM_{2.5} collocation requirements are currently met.

Recommended/proposed modifications:

Ecology is currently evaluating potential locations for a second PM_{2.5} monitoring site in the Spokane-Spokane Valley MSA and plans to establish a second site by January 1, 2020.

The 8500 TEOM will be replaced with a BAM 1020 at Seattle-Beacon Hill (530330080) to fulfill the unmet collocation requirement for method code 170.

Nephelometer PM_{2.5} (88502)

Ecology and its partners operate 42 monitoring sites with correlated nephelometers used to report estimated PM_{2.5} concentrations and provide timely information on air quality conditions to the public. Sites operated with EPA funding through the Section 103 grant for PM_{2.5} are noted in Table 18.

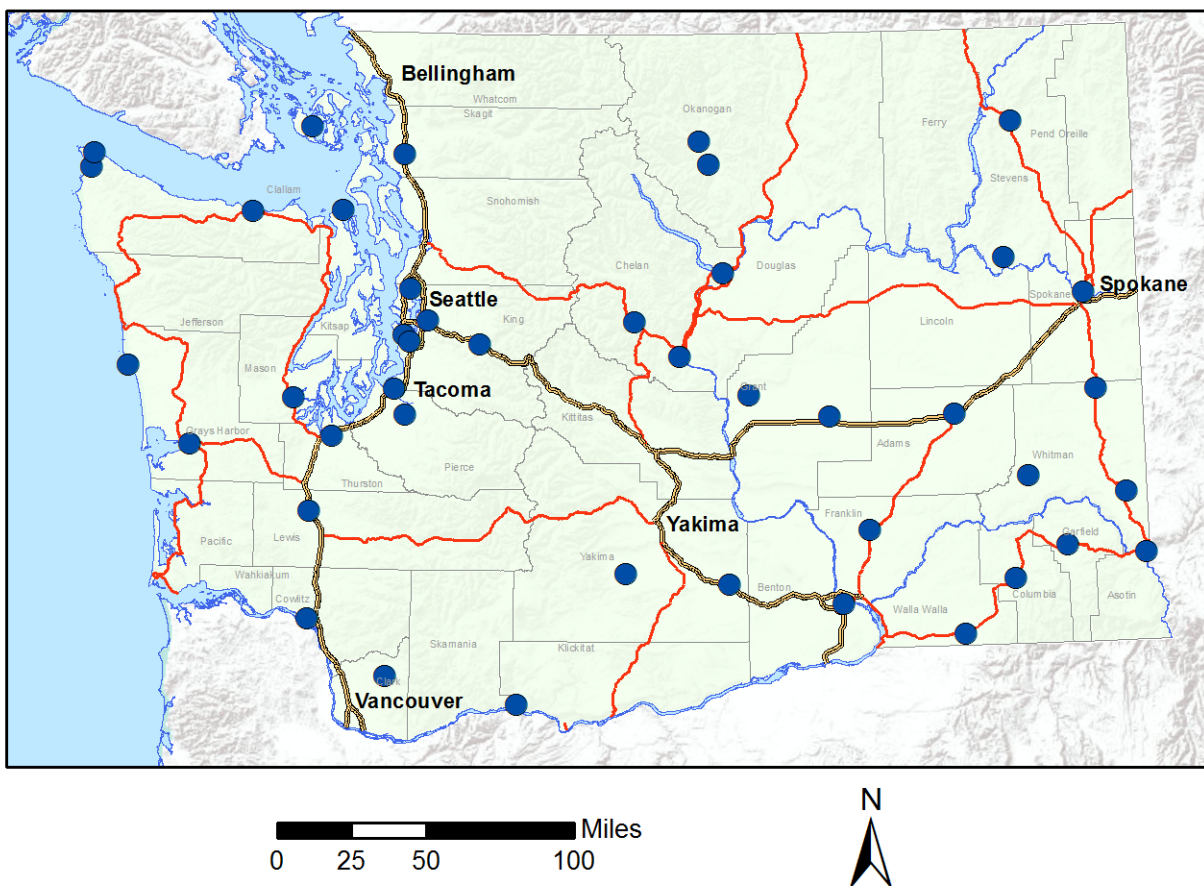

Figure 10. Map of Washington Network nephelometer monitoring sites

Recommended/proposed modifications:

The temporary nephelometer monitoring study at Quincy (530251003) was extended until December 2020.

The temporary Friday Harbor nephelometer site (530550001) was discontinued in May 2019.

The temporary White Salmon (530390006) and Pomeroy (530230001) SPMS may be relocated in 2019-2020 if monitoring needs arise in other areas.

Meteorological monitoring (61101/61102/61103/61104/62101)

There are 18 meteorological monitoring sites in the Washington Network. All Washington Network meteorological monitoring sites collect scalar and vector wind speed and direction using RM Young or Vaisala sonic anemometers (method codes 062 and 060, respectively) and ambient temperature under method code 040 (electronic or machine average). All Washington Network meteorological sites follow EPA's monitoring guidelines for prevention of significant deterioration (PSD). For detailed site and monitor information, see Appendix D.

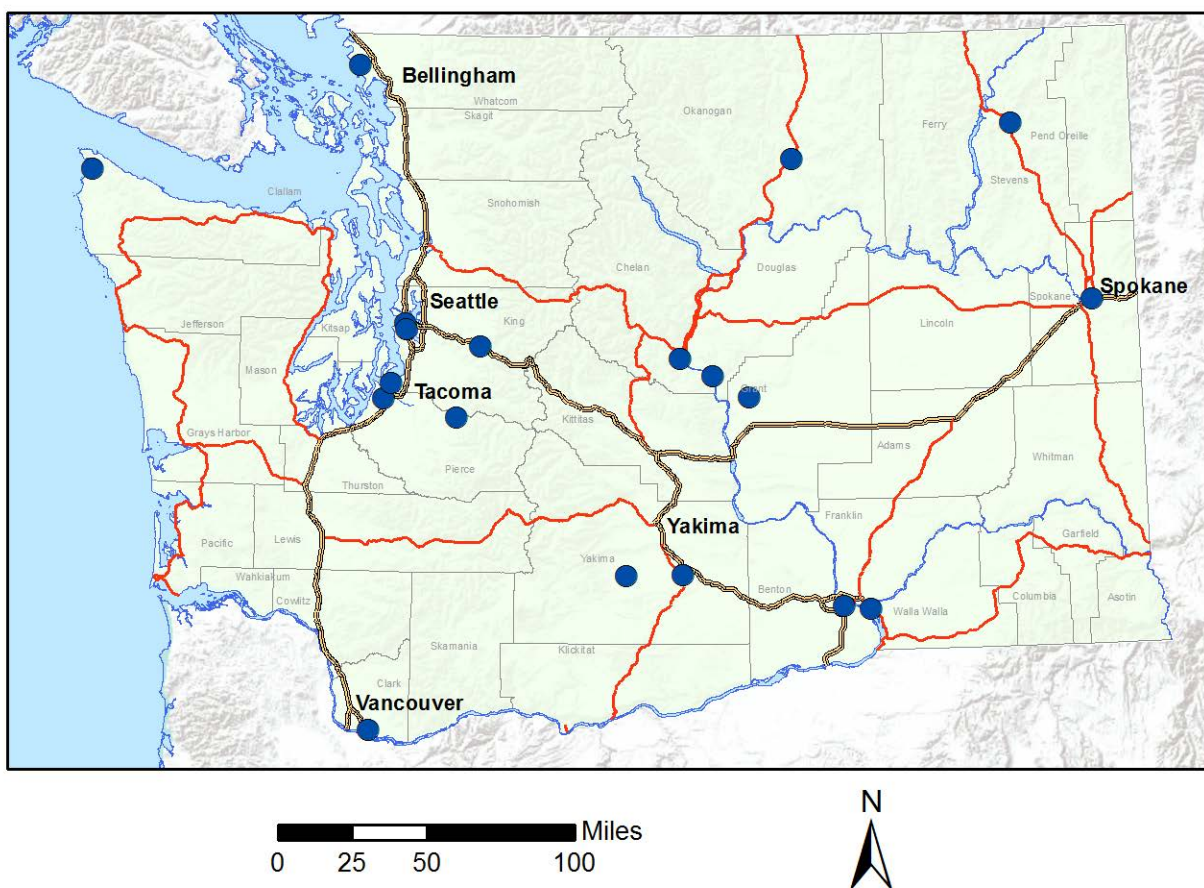

Figure 11. Map of Washington Network meteorological monitoring sites

Recommended/proposed modifications: The temporary Quincy meteorological monitoring site will be retained until December 2020.

Lead (Pb)

Ecology reports Pb in PM₁₀ concentrations as part of the National Air Toxics Trends Station (NATTS) monitoring at Seattle-Beacon Hill (530330080). At the request of EPA, Ecology ceased reporting to parameter code 85129 and began reporting to parameter code 85128 as of January 1, 2019.

As described in 40 C.F.R. Part 58, Appendix D § 4.5, source-oriented lead monitoring is required in the vicinity of sources that emit 0.5 tons per year or more of lead. According to the 2017 National Emissions Inventory, Washington's only source above this threshold is Ardagh Glass in Seattle. Ecology modeled the impact of this facility on ambient air and demonstrated that it would not contribute to a maximum Pb concentration in ambient air above 50 percent of the NAAQS. On April 18, 2019, EPA issued Ecology a waiver for lead monitoring at Ardagh Glass based on the modeling results. This waiver is provided in Appendix C.

Recommended/proposed modifications: None.

Chemical Speciation Network (CSN)

Ecology and its partners operate 6 speciation monitoring sites as part of the national Chemical Speciation Network. Four of these sites are ongoing, including one Speciation Trends Network (STN) site and three supplemental CSN sites. The remaining two speciation sites are operating for special studies funded by state or local partners from 2018-2021.*

Table 17. Washington Network Chemical Speciation Network monitoring sites

AQS ID	Site Name	Established	Type	Scale
530330030	Seattle-10 th & Weller	11/2014	Supplemental CSN	Microscale

530330057	Seattle-Duwamish	08/2018	Special study (funded by Puget Sound Clean Air Agency)*	Neighborhood
530530031	Tacoma-Alexander	08/2018	Special study (funded by Washington State legislature)*	Neighborhood
530530029	Tacoma-L St	01/2006	Supplemental CSN	Neighborhood
530770009	Yakima-4 th Ave S	11/2007	Supplemental CSN	Neighborhood

*With the passage of the Washington State 2018 supplemental operating budget (Engrossed Substitute Senate Bill 6032), Ecology was directed to use state funding to conduct a multiyear source apportionment study at the monitoring site closest to the Port of Tacoma. Ecology began conducting PM_{2.5} speciation monitoring at PSCAA's Tacoma-Alexander Ave (530530031) monitoring site on August 6, 2018. Puget Sound Clean Air Agency is conducting a parallel speciation study at the Seattle-Duwamish monitoring site (530330057) concurrently with the Tacoma study. These studies will continue until August 2021.

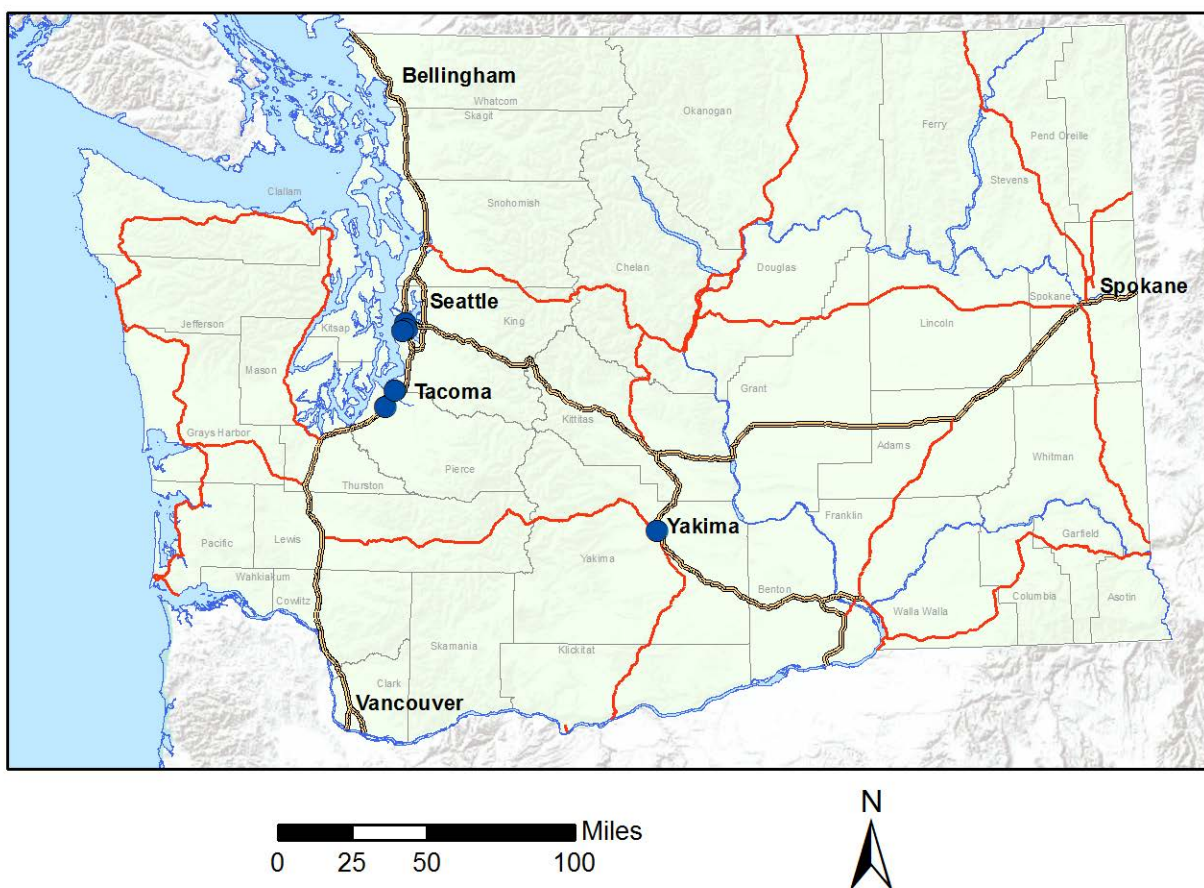

Figure 12. Map of Washington Chemical Speciation Network monitoring sites

Each speciation site samples the following parameters:

Table 18. Chemical Speciation Network monitoring parameters

Code	Parameter	Code	Parameter	Code	Parameter	Code	Parameter
88102	Antimony	88126	Iron	88167	Zinc	88370	OC CSN Rev Unadjusted

88118	Cesium	88166	Silver	88357	EC CSN Rev Unadjusted	88502	PM _{2.5} Speciation Mass

Recommended/proposed modifications: In its 2018 ANP, Ecology proposed to relocate the Tacoma-L St (530530029) speciation monitor to the Tacoma-S 36th St (530530024) near-road monitoring site. However, since submission of the 2018 ANP, operational challenges to speciation data collection have grown at the Seattle-10th and Weller monitoring site (530330030). Due to the environment around the near-road monitoring site, Ecology has concerns about operators' safety in accessing the site regularly. Relocating the speciation monitoring equipment to another site would reduce the number of required trips to the near-road monitoring site and help alleviate these safety concerns.

As these challenges are more urgent than the pending Tacoma relocation, Ecology delayed the relocation of the Tacoma site to evaluate alternate potential locations for Seattle-10th and Weller speciation monitoring. Ecology hopes to relocate the speciation monitoring equipment from Seattle-10th and Weller to a site in Central Washington but has not yet identified operational resources for this relocation. Ecology will continue to pursue alternatives to speciation monitoring at Seattle-10th and Weller in other high-PM_{2.5} areas of the state and will revisit relocation of the Tacoma site at a later date.

National Core (NCore)

There are two NCore sites in the Washington Network: Seattle-Beacon Hill (530330080) is an urban NCore site, and Cheeka Peak (530090013) is a rural NCore site. The parameters monitored at each site are summarized in Table 22.

Table 19. NCore parameters monitored at Cheeka Peak and Seattle-Beacon Hill

Parameter	Cheeka Peak	Seattle-Beacon Hill
Trace CO (42101)	✓	✓
Trace NO _y (42600)	✓	✓
Area-wide NO ₂ (42602)		✓
Ozone (44201)	✓	✓
Trace SO ₂ (42401)	✓	✓
Filter-based PM ₁₀ (81102)		✓
Filter-based PM _{2.5} (88101)		✓
Continuous FEM PM _{2.5} (88101)		✓
Nephelometer PM _{2.5} (88502)	✓	
Meteorological (61101/61102/61103/61104/62101/64101/62201)	✓	✓
PM _{2.5} speciation		✓
PM _{10-2.5} (86101)		✓

Recommended/proposed modifications: None.

National Air Toxics Trends Station (NATTS)

Seattle-Beacon Hill (530330080) is a National Air Toxics Trends Station (NATTS) as well as a CSN, NCore and SLAMS site.

Recommended/proposed modifications: None.

Photochemical Assessment Monitoring Station (PAMS)

Based on 40 C.F.R. Part 58, Appendix D, state air monitoring agencies are required to begin making PAMS measurements at their NCore location(s) by June 1, 2019. The equipment needed to measure PAMS parameters were to be purchased by EPA using a nationally negotiated contract and delivered to the monitoring agencies. EPA has announced that due to contract delays, the necessary equipment will not be delivered in time to begin making PAMS measurements by June 1, 2019. EPA has indicated that it is working on a proposed rule to extend the start date of PAMS measurements and expects that this proposed rule change will be signed by June 1, 2019. As a result of the delay, Ecology will not begin making PAMS measurements at the Seattle-Beacon Hill NCore location in 2019, and will work with EPA to begin measurements on or before the final revised start date for this network.

Table 20 summarizes the required PAMS parameters and Ecology’s schedule for implementing new monitoring requirements. Parameters that are already monitored at Seattle-Beacon Hill are marked “existing.”

Table 20. Required PAMS parameters and implementation schedule

Parameter	Implementation Schedule
Hourly averaged VOCs	Auto-GC received but ancillary equipment has not been provided. Ecology has delayed implementation of hourly average VOC sampling until necessary equipment and/or funding are provided by EPA
Three 8-hour averaged carbonyl samples per day on a 1/3 schedule	Carbonyl sampling is already conducted; Ecology has delayed modification to sampling schedule until funding is provided for additional laboratory analysis costs
Hourly averaged O ₃	Existing
Hourly averaged NO, true nitrogen dioxide (NO ₂), and total reactive nitrogen (NO _y)	Existing
Hourly averaged ambient temperature	Existing
Hourly vector-averaged wind direction	Existing
Hourly vector-averaged wind speed	Existing
Hourly average atmospheric pressure	Existing
Hourly averaged relative humidity	Existing
Hourly precipitation	Implementation delayed until equipment or funding provided by EPA
Hourly averaged mixing height	Implementation delayed until equipment or funding provided by EPA
Hourly averaged solar radiation	Implementation delayed until equipment or funding provided by EPA
Hourly averaged ultraviolet radiation	Implementation delayed until equipment or funding provided by EPA

Table 26. PM_{2.5} 2018 24-hour design values and pseudo-design values (µg/m³)

Design values from FRM and FEM monitoring sites are shaded. Pseudo-design values from nephelometer sites are estimates only and cannot be used to determine compliance with the NAAQS. DVs in parenthesis are estimated from fewer than three years of available data. The 98th percentiles in parenthesis are estimated from quarters between 50% and 75% complete that fail the maximum quarterly value substitution test (FEM/FRMs only). In years with one or more quarters less than 50% complete, 98th percentiles are not reported.

Appendix B. EPA Response to Ecology's 2018 Annual Network Plan

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION 10

1200 Sixth Avenue, Suite 155
Seattle, WA 98101-3140

OFFICE OF
AIR AND WASTE

AUG 13 2018

Ms. Jill Schulte
Ambient Air Monitoring Coordinator
Department of Ecology
State of Washington
P.O. Box 47600
Olympia, Washington 98504-7600

Dear Ms. Schulte:

The U.S. Environmental Protection Agency, Region 10 evaluated the Washington Department of Ecology's 2018 Annual Monitoring Network Plan (ANP) received on June 28, 2018. This approval letter documents Region 10's findings from the review of this ANP.

Based on our review of the ANP, we did not identify any monitoring deficiencies for Washington State's ambient air monitoring network. However, we did identify the following potential network issues, which should be assessed during the remainder of CY 2018. If monitoring is found to be required through this review, Region 10 requests that Ecology identify these network modifications in the 2019 ANP:

1. Regulatory ambient air monitoring for Lead (Pb) is currently not performed by Ecology or its local air programs. Based on EPA's 2014 National Emission Inventory (NEI), two facilities in the State of Washington have ambient air Pb emissions above the 0.5 tons/year threshold that require source oriented Pb monitoring. See 40 CFR Part 58 Appendix D §4.5(a). These facilities are:
 - a. Alcoa Primary Metals Intalco Works
NEI Pb reported emissions at 0.83 Tons/Yr
EIS ID: 4937811
4050 Mountain View Rd, Ferndale WA
Whatcom County
 - b. Ardagh Glass
NEI Pb reported emissions at 0.57 Tons/Yr
EIS ID: 4985311
5801 E Marginal Way S, Seattle WA
King County

Region 10 recommends that Ecology assess whether the 2014 NEI Pb emissions accurately represent these facilities. If these emission estimates are accurate, Ecology should begin investigating locations suitable for Pb monitoring around these facilities and begin monitoring January 1, 2019. Please notify Region 10 if siting or logistical considerations prohibit Ecology to begin monitoring by this date. Alternatively, if Ecology determines that the 2014 NEI Pb

emissions are incorrect for either or both of these facilities, then instead of siting additional monitors, Ecology should update the annual lead emission estimates in EPA's NEI.

2. As identified in Table 11 of the ANP, multiple Metropolitan Statistical Areas (MSAs) in the State of Washington have fewer PM₁₀ monitors than the minimum network sizes specified in Table D-4 of 40 CFR Part 58 Appendix D. During 2018, Ecology and Region 10 plan to assess whether PM₁₀ air quality trends and geographical patterns can be accurately represented with the current PM₁₀ networks. For those MSAs where additional monitors are not needed to meet these objectives, Region 10 may provide waivers to operate a smaller network than is specified in Section 4.6 of 40 CFR Part 58 Appendix D.

In our review of the ANP, Region 10 made the following observations and provide them for your consideration.

3. Region 10 recommends providing Annual Average Daily Traffic (AADT) counts for each ambient air monitoring site. Without both roadway distances and AADT counts, it is not possible to verify that monitoring scales are appropriate for the specifications provided in Section 6.3 and Figure E-1 of 40 CFR Part 58 Appendix E. Region 10 requests that roadway distances and AADT also be updated in AQS.
4. Region 10 requests that Ecology keep us updated with its plan for establishing an interagency agreement with the Oregon Department of Environmental Quality for jointly meeting minimum monitoring requirements for the Portland-Vancouver-Hillsboro, OR-WA MSA.

Region 10 approves the monitor type change at the Burbank PM₁₀ monitor (AQS ID: 53-071-0006) from SPM to SLAMS. Region 10 requests that the effective date of the SLAMS designation for this monitor be January 1, 2018. Emission estimates indicate that an agricultural tilling area source and a point source facility (Simplot Feeders) are the primary anthropogenic PM₁₀ sources for this area. The Burbank monitoring location represents the area wide agricultural tilling source and most of the population exposure in the Wallula maintenance area. However, monitoring scales for PM₁₀ point sources (e.g., Simplot) are typically neighborhood scale (4 km) or less in size and the Burbank monitor is approximately 10 km from this facility. Furthermore, the Burbank monitoring location is located off axis from the prevailing wind direction. Review of windrose plots indicates that the prevailing winds are from the southwest. Burbank is northwest of the Simplot Feeders facility. As such, the Burbank monitor may not be representative of the ambient air near the Simplot Facility.

Region 10 acknowledges the logistical obstacles in acquiring access to a monitoring location in the Wallula Maintenance Area due to the extensive agricultural land use. This is particularly true near the Simplot Facility. As such, since the Burbank monitor is the sole PM₁₀ monitor in the Wallula Maintenance Area, Region 10 approves this monitor as a compliance monitor. However, Region 10 also encourages Ecology to continue to search for a monitoring location closer to the Simplot facility so that the monitoring network would be representative of both the emissions from the maintenance area's predominate point as well as the area sources in the maintenance area.

2019 Ambient Air Monitoring Network Plan

Region 10 approves the State of Washington's 2018 ANP. Region 10 appreciates the timeliness and detail provided in the ANP. If you have any questions about our approval of the ANP, please contact Doug Jager at (206) 553-2961.

Sincerely,

Gina Bonifacino, Acting Manager
Air Planning Unit

Appendix C. Monitoring Waivers

Lead (Pb)

In 2014, EPA approved the use of lead in PM₁₀ measurements as a surrogate for lead in TSP at Seattle-Beacon Hill (530330080). Ecology met this requirement through lead analysis of low-vol PM₁₀ filters analyzed through the NATTS program. In 2016, EPA discontinued the requirement for lead monitoring at NCore sites. Ecology continues to report measurements of lead in PM₁₀ at Seattle-Beacon Hill as a NATTS parameter. In 2017, at the request of EPA Region 10, Ecology redesignated the Seattle-Beacon Hill lead monitor a “NAAQS-exclusion” type monitor. At the further request of EPA, Ecology ceased reporting to parameter code 85129 and began reporting to parameter code 85128 as of January 1, 2019. It is no longer used to demonstrate compliance with the NAAQS.

On April 18, 2019, EPA issued Ecology a waiver for the source-oriented lead monitoring requirement at Ardagh Glass in Seattle. That waiver is provided below.

2019 Ardagh Glass Pb Waiver Approval

The U.S. Environmental Protection Agency has completed our review of your supporting information for waiving ambient air lead monitoring for the Ardagh Glass facility in Seattle, Washington (EIS ID: 4985311). Based on the information you provided in Attachment E of your correspondence and the available data in AQS, Region 10 agrees that the ambient air lead monitoring for this facility based on the results of the AERMOD dispersion modeling conducted by your staff meet the regulatory requirements for waiving ambient air lead monitoring for this facility.

According to 40 CFR Part 58, Appendix D §4.5(a)(ii), the Regional Administrator may waive the requirement for lead source monitoring if the state can demonstrate that the source will not contribute to a maximum lead concentration in ambient air in excess of 50 percent of the NAAQS. The modeling approach and protocol for the Ardagh Glass facility conducted by the Department of Ecology was consistent with the EPA's guidance and modeling requirements found in 40 CFR Part 51, Appendix W. The results of this modeling demonstrate that the maximum ambient air 3-month rolling average lead concentration at the facility does not exceed 50 percent of the lead NAAQS.

Monitoring regulations require that this waiver must be renewed every five years. As such, this waiver will be due for renewal in calendar year 2023 if the NEI emission estimates for this facility continue to be above 0.5 tons/year. The EPA reserves the right to rescind this waiver should a future need arise (e.g., increased production or emissions at the facility, monitoring regulation changes, or revisions to the NAAQS).

Enclosure 3

Yakima CO

In 2006, EPA approved the discontinuation of the Yakima CO monitor based on the low concentrations measured at the monitor and predicted reductions in onroad mobile source emissions in Yakima. Below is the approval letter from EPA approving discontinuation of the monitor.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION 10
1200 Sixth Avenue
Seattle, WA 98101

MAR 03 2006

Reply to
Attn Of: OAWT-107

Mr. Mike Ragan
Air Monitoring Coordinator
Air Quality Program
P.O. Box 47600
Olympia, WA 98504-7600

Re: Approval of the Washington 2006 Ambient Monitoring Network

Dear Mr. Ragan:

We have evaluated the Washington 2005 Ambient Air Monitoring Network Assessment and Ecology's proposed monitoring network for 2006. As you know, in December 2005 EPA proposed a lower 24-hour PM_{2.5} monitoring standard of 35 ug/m³, and a new 24-hour PM_{coarse} standard of 70 ug/m³ to replace the current PM₁₀ standard. The implementation of these new standards will have a significant effect on the future number and locations of PM monitors in the State's monitoring network. This should be a major consideration in your 2006 annual monitoring network assessment. In order to ensure continued PM_{2.5} monitoring at sites required by population (40 CFR Part 58), and at sites reporting values near or above the proposed PM_{2.5} standard, Region 10 developed a list of monitoring priorities for a "core" PM_{2.5} monitoring network (Attachment 1). In response to these monitoring priorities, Ecology has proposed to discontinue PM_{2.5} FRM monitors at the following sites:

<u>Monitoring Site</u>	<u>AIRS#</u>
1. Moose Lodge -- Vancouver	530110013
2. Benton County -- Kennewick	530050002
3. Monroe Street - Spokane	530630047

The PM_{2.5} design values for these sites, based on monitoring data collected over the past 3 years, are below the current PM_{2.5} and proposed PM_{2.5} standards. Therefore, I approve the discontinuation of these PM_{2.5} FRM monitors. Ecology is authorized to operate all PM_{2.5} "core" monitors for 2006 including:

1. PM_{2.5} FRMs (or FEMs, if approved) at the Beacon Hill, Duwamish (primary and co-located), Crown Zellerbach (primary and co-located), and Tacoma/L Street sites.
2. PM_{2.5} speciation monitors located at the following sites:
 - a. Beacon Hill
 - b. Spokane
 - c. Duwamish
 - d. Tacoma

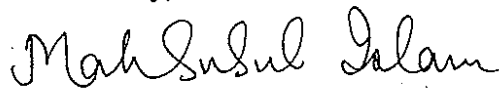

- e. Lake Forest Park
- 3. Pre-cursor gas monitors operated at the Beacon Hill site

Operation of any additional PM2.5 monitors, in addition to the PM2.5 “core” network, are authorized as funding permits. Ecology is authorized to operate all ozone, SO₂, NO_x, other CO, and PM10 monitors identified in the 2005 Washington Ambient Air Monitoring Network Review.

The Yakama Regional Clean Air Authority has requested permission to discontinue operations of its CO monitor at the Tattoo Parlor site in Yakama. The rationale for discontinuing this monitor is that CO 8-hour design values at this site have decreased from a value of 5.1 ppm in 1998-1999, to a value of 3.5 ppm in 2002-2003. In addition, EPA’s MOBILE6.2 model predicts that on-road mobile source emissions of CO in Yakama will decrease by 12.4% compared to the 1999 mobile source emissions. This should ensure that the 8-hour CO design values remain substantially below the CO standard of 9 ppm. Therefore, I approve the discontinuation of this CO monitor.

If you have any questions about our approval of the WA monitoring network, please contact Keith Rose at (206) 553-1949.

Sincerely,

Mahbubul Islam, Manager
State and Tribal Program Unit
Office of Air, Waste and Toxics

cc: William Puckett, OEA

Spokane CO

On July 14, 2016, Federal Register #81 FR 45417, the EPA approved an alternate method of verification of attainment of the CO NAAQS in Spokane and qualification for the limited maintenance plan option under 40 C.F.R. Part 58.14(c) in the Spokane Maintenance Area. Under this alternative, EPA considers the limited maintenance plan criteria met and continued verification of attainment of the CO NAAQS if the total of the three predominant CO emission source categories calculated as part of the triennial emissions inventory (onroad mobile, nonroad, and residential wood combustion) remain below the corresponding total of the 2002 emission inventory source categories approved at the time the Spokane area was redesignated to attainment. SRCAA and Ecology will compare future year 2017, 2020 and 2023 triennial emission analysis results to the baseline 2002.

PM₁₀

In the summers of 2017 and 2018, Washington experienced extended smoke events from regional wildfires in the Pacific Northwest. These smoke events caused repeated exceedances of the PM₁₀ standard in Yakima and Kennewick, which triggered additional monitoring requirements as detailed in 40 C.F.R. Part 58 Appendix D, Table D-4. In addition, Kennewick routinely experiences high wind dust events that cause exceedances of the PM₁₀ standard. Due to the regional and exceptional nature of these events, EPA issued Ecology waivers for the unmet PM₁₀ monitoring requirements in the Yakima and Kennewick-Richland MSAs on April 18, 2019. The waivers are provided below.

Yakima PM10 Waiver Approval

The U.S. Environmental Protection Agency has completed our review of your supporting information for waiving additional PM₁₀ monitoring in the Yakima MSAs. Based on the information you provided in Attachment C of your correspondence and the available data in AQS, Region 10 agrees that the high concentration PM₁₀ air quality episodes were broad scale events driven by wildfires. As such, Region 10 also concurs that the existing PM₁₀ monitor in the Yakima MSA (AQS ID: 53-077-0009) is adequate for characterizing the PM₁₀ air quality trends and spatial geographical patterns in this MSA. Per 40 CFR Part 58, Appendix D §4.6(a), Region 10 waives the minimum PM₁₀ network size specified by Table D-4 of 40 CFR Part 58, Appendix D for the Yakima MSA and allows the Department of Ecology to use the existing PM₁₀ monitor (AQS ID: 53-077-0009) for meeting minimum regulatory monitoring requirements for this MSA.

This monitoring waiver is effective for five years and may need to be renewed in calendar year 2023 to keep the minimum monitoring requirements set at a single PM₁₀ monitor. The EPA reserves the right to reinstate the additional PM₁₀ monitoring requirements in the MSA sooner than five years should a future need arise (e.g., changes in air quality due to local sources, monitoring regulation changes, or revisions to the NAAQS).

Enclosure 1

2019 Kennewick PM10 Waiver Approval

The U.S. Environmental Protection Agency has completed our review of your supporting information for waiving additional PM₁₀ monitoring in the Kennewick-Richland MSAs. Based on the information you provided in Attachment B of your correspondence and the available data in AQS, Region 10 agrees that the high concentration PM₁₀ air quality episodes were broad scale events driven by high winds and wildfires. As such, Region 10 also concurs that the existing PM₁₀ monitor in the Kennewick-Richland MSA (AQS ID: 53-005-0002) is adequate for characterizing the PM₁₀ air quality trends and spatial geographical patterns in this MSA. Per 40 CFR Part 58, Appendix D §4.6(a), Region 10 waives the minimum PM₁₀ network size specified by Table D-4 of 40 CFR Part 58, Appendix D for the Kennewick-Richland MSA and allows the Department of Ecology to use the existing PM₁₀ monitor (AQS ID: 53-005-0002) for meeting minimum regulatory monitoring requirements for this MSA.

This monitoring waiver is effective for five years and may need to be renewed in calendar year 2023 to keep the minimum monitoring requirements set at a single PM₁₀ monitor. The EPA reserves the right to reinstate the additional PM₁₀ monitoring requirements in the MSA sooner than five years should a future need arise (e.g., changes in air quality due to local sources, monitoring regulation changes, or revisions to the NAAQS).

Enclosure 2

Appendix D. Detailed Site and Monitor Information

The tables below describe the detailed site and monitor information for each monitoring site in the Washington Network. This information demonstrates compliance with the probe and monitoring path siting criteria described in 40 C.F.R. Part 58 Appendix E.

Statement of Purpose: The Quincy SPMS was established for a 1-year study to evaluate markers of diesel exhaust pollution. The small town of Quincy has a number of diesel exhaust sources, including two state highways, an active rail line, and a number of data centers with diesel-powered generators. Due to ongoing interest in the meteorological data, the meteorological and nephelometer data collection was extended until at least December 2020.

Appendix E. Interstate Memorandum of Understanding

Memorandum of Understanding
Between
Oregon Department of Environmental Quality
And
Washington Department of Ecology

I. PURPOSE

This Memorandum of Understanding (MOU) is entered into by and between the Oregon Department of Environmental Quality Air Quality Program, hereinafter referred to as ODEQ, and the Washington Department of Ecology Air Quality Program, hereinafter referred to as WDOE.

The purpose of this MOU is to agree in principle to cooperate with shared resources to collectively meet the United States Environmental Protection Agency (US EPA) minimum monitoring requirements for criteria air pollutants in the Portland-Vancouver-Hillsboro, OR-WA Metropolitan Statistical Area (MSA).

II. STATEMENT OF MUTUAL BENEFITS AND INTEREST

The Portland-Vancouver-Hillsboro, OR-WA MSA consists of Clackamas, Columbia, Multnomah, Washington, and Yamhill Counties in Oregon and Clark and Skamania Counties in Washington. The network design criteria for ambient air quality monitoring described in 40 C.F.R § 58 Appendix D require that in areas where metropolitan statistical areas (MSAs) cross jurisdictional boundaries, “full monitoring requirements apply separately to each affected State or local agency in the absence of an agreement between the affected agencies and the EPA Regional Administrator.” This MOU establishes an agreement that ODEQ and WDOE cooperatively meet the minimum monitoring requirements in the Portland-Vancouver-Hillsboro, OR-WA MSA.

The Portland-Vancouver-Hillsboro, OR-WA MSA had an estimated population of 2,478,810 as of July 1, 2018. Based on 40 C.F.R § 58 Appendix D, the following minimum monitoring requirements for criteria pollutants apply to an MSA of this population size:

Pollutant	Minimum Number of Required Monitors
Ozone (O ₃)	2
Carbon Monoxide (CO)	2
Nitrogen Dioxide (NO ₂)	2*
Sulfur Dioxide (SO ₂)	1
Particulate Matter ≤10µm (PM ₁₀)	2
Fine Particulate Matter (PM _{2.5})	3

* An additional NO₂ monitor will be required if the population of the MSA grows above 2,500,000 people.

As of January 1, 2019, the minimum monitoring requirements were met or exceeded in the Portland-Vancouver-Hillsboro, OR-WA MSA for each of the criteria pollutants listed above.

III. GENERAL ROLES

ODEQ and WDOE formally agree to collectively provide adequate criteria pollutant monitoring as required by 40 C.F.R § 58 Appendix D. Each agency shall inform the other agency at its earliest convenience via telephone or email of any monitoring changes within the Portland-Vancouver-Hillsboro, OR-WA MSA that impact the minimum monitoring requirements. In the event that new minimum monitoring requirements are imposed after the execution of this MOU, ODEQ and WDOE agree to consult and jointly determine how to meet the new requirements.

IV. IT IS MUTUALLY AGREED AND UNDERSTOOD BY AND BETWEEN THE SAID PARTIES THAT:

- A. This instrument is neither a fiscal nor a funds obligation document. Any endeavor involving reimbursement or contribution of funds between the parties to this instrument will be handled in accordance with applicable laws, regulations, and procedures, including those for government procurement and printing. Such endeavors will be outlined in separate agreements that shall be made in writing by representatives of the parties, and shall be independently authorized by appropriate statutory authority. This instrument does not provide such authority.
- B. This instrument in no way restricts ODEQ or WDOE from participating in similar activities with other public or private agencies, organizations, and individuals.
- C. Pursuant to Section 22, Title 41, United States Code, no Member of, or Delegate to, Congress shall be admitted to any share or part of this instrument, or any benefits that may arise therefrom.
- D. Nothing in this MOU shall be construed as obligating either party to expend funds or to make any contract or other obligation for the future payment of money in excess of appropriations authorized by law and administratively allocated for this purpose.
- E. Modifications within the scope of this instrument shall be made by mutual consent of the parties, by the issuance of a written modification, signed and dated by both parties.
- F. Either party(s), in writing, may terminate the MOU in whole, or in part, at any time before the date of expiration provided that written notice is sent to the other party at least 120 calendar days prior to the termination date.
- G. This MOU shall be effective upon execution by both parties and shall remain in effect for a period of 5 years unless otherwise modified. This agreement can be extended if mutually agreed to by both parties.

H. The principal contacts for this instrument are:

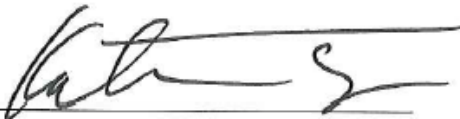

Oregon Department of Environmental Quality
Anthony Barnack, Ambient Monitoring Coordinator
7202 NE Evergreen Parkway, Suite 150
Hillsboro, OR 97124-6166
(503)693-5708

Washington Department of Ecology
Jill Schulte, Air Monitoring Coordinator
PO Box 47600
Olympia, WA 98504-7600
(360) 407-6877

In Witness whereof, the parties hereto have executed this MOU as of the last date written below:

5/13/19 

Date Tom Roick
Air Quality Monitoring Manager
Oregon Department of Environmental Quality

5/20/19 

Date Kathy Taylor
Deputy Program Manager
Air Quality Program

Appendix F. Public Comment Period

The 2019 Ambient Air Monitoring Network Plan was posted for public comment from May 15 – June 14, 2019, on Ecology’s webpage. No comments were received.

COMMENT PERIOD

Annual Air Quality Monitoring Network Plan

Air quality monitoring network

May 15, 2019 - June 14, 2019

Ecology's draft annual air quality monitoring network plan is available for review. This report describes Washington's air monitoring network and how Ecology will operate its air quality monitoring stations in the next year. Ecology reviews its air quality monitoring network each year to ensure that it collects adequate, representative, and useful air quality data.
