

CHECK YOUR CENTRAL ACCUMULATION AREAS

1

PROPER SIGNS:

Use appropriate warning signs for the area, such as a no smoking sign near ignitable and reactive wastes.

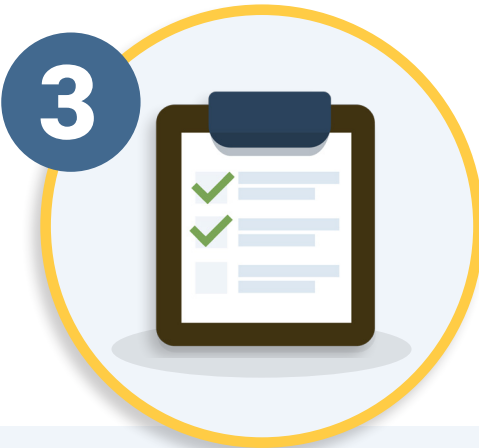

2

KEEP CONTAINERS CLOSED:

Prevent spills by keeping containers closed except when adding waste.

3

WEEKLY INSPECTIONS:

Conduct weekly inspections and keep a log. Look for leaking or deteriorating containers.

4

FIRE PROTECTION:

Keep a fire extinguisher nearby.

5

SPILL KIT:

Keep a well-stocked spill kit within the area.

6

SEPARATE WASTES:

Store incompatible wastes in different areas to avoid fire or explosion.

7

COMMUNICATION DEVICE:

Keep a phone or two-way radio nearby along with emergency contact numbers.

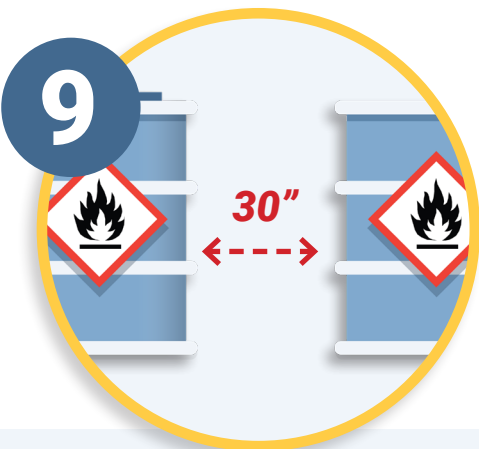

8

LABELS AND DATE:

Label containers so they're legible or recognizable from 25 ft (or letters at least 1/2" tall). Mark with accumulation start date.

9

AISLE SPACE:

Leave at least 30" of aisle space between rows of containers. Rows must not be more than two containers wide.

10

SECONDARY CONTAINMENT:

Ensure the containment area can hold 10% of all free liquids or 100% of the largest container, whichever is greater.
