News & Notes

Novel coronavirus (COVID-19) information

We are joining a statewide effort to slow the spread of COVID-19 by supporting social distancing and other directives from Governor Inslee as well as federal, state, and local health officials.

- **All Department of Ecology buildings are closed to the public until further notice.** This includes all headquarters, regional, and field offices.
- **We are still operating**, and you can reach staff from any of our offices via email and phone.
- All public meetings have been changed to **online-only meetings**. Visit our [public input and events listings](#)⁵ for up-to-date information on public meetings.
- **In-person document and record reviews are not currently available.** Public libraries and other repositories are listed in previous Site Register editions as document review locations are also closed. If you would like to request to receive specific records electronically, [please let us know](#).⁶ You can access all documents that are listed in the Site Register for public review and comment online:

1. Under the "**For more information**" heading in the left-hand column of each Site Register entry, you will find a link to visit Ecology's webpage for the site.
2. From that site page, there is a "**View Electronic Documents**" link in the right-hand column that will take you to a list of all posted documents.

Thank you for your patience and understanding as we work together to defend the health and well-being of all Washingtonians.

For the latest information, please visit the state's coronavirus website at <https://coronavirus.wa.gov>.

Grant funding available for local governments

Applications now being accepted

Local government representatives can apply for grants and loans to help clean up sites and protect drinking water in their communities. The Toxics Cleanup Program will be accepting applications for **Integrated Planning Grants (IPGs)**.

Integrated Planning Grants

We have Integrated Planning Grant (IPG) funding available. For questions about a potential brownfield

redevelopment project and whether it qualifies for an IPG, contact one of the IPG Coordinators listed on our Integrated Planning Grant webpage. To be considered for the next funding evaluation cycle, submit your application by **January 29, 2021**.

You can apply for all grant types through [Ecology's Administration of Grants & Loans system \(EAGL\)](#)⁷, and we have [guidance](#)⁸ to help.

2020 MTCA report estimates Washington's cleanup funding needs

Every two years, Ecology coordinates with local governments to produce a MTCA report for the Legislature. The 2020 report is now online: [Model Toxics Control Act Capital Account: Ten-Year Financing Report 2020](#)⁹.

This report reflects what we heard from local governments. Ecology offers grants and loans through the Remedial Action Grant (RAG) program to help local governments investigate and clean up sites in their communities. Over the past year and during the 2020 solicitation process in February and March, we encouraged people to apply for [several RAG opportunities](#)¹⁰ and share information with us about their planned cleanups. More than 20 local governments responded. This report includes:

- Projects that local governments submitted for funding consideration, and the projects and grant programs that were included in Ecology's budget request to the Governor for the 2021–23 biennium.
- Estimates of future cleanup funding needed over the next biennium (2021–23) and next ten years, totaling \$1.4 billion over the coming decade.

- Cleanup obligations that Washington state will be financially responsible for, such as grant programs and cleaning up orphaned & abandoned sites.
- Background about MTCA and the cleanup process, with maps, figures, and data illustrating the breadth of Washington's cleanup challenges.

While the Ten-Year Report looks to the future; its companion report looks to the past. Check out [the MTCA Biennial Report of Expenditures](#)¹¹ featuring success stories, photos, and data that describes how we spent MTCA cleanup funds over the previous biennium.

Why do these financial reports matter? With more than 13,400 confirmed or suspected contaminated sites in Washington, there's likely a cleanup happening near you. These reports are some of the ways we update you on the critical work that helps protect Washington's health, environment, and economy. Visit [What's in My Neighborhood](#)¹² and [Cleanup and Tank Search](#)¹³ to learn about cleanups in your area, and subscribe to the [RAG Listserv](#)¹⁴ to hear about upcoming RAG grant and loan opportunities.

Formal Cleanups

We oversee complex cleanup sites to protect your health and the environment.

Nov. 19–Dec. 20: Draft Periodic Review Report available for public comment

When an environmental covenant exists for a cleanup site, we review site conditions about every five years to ensure the long-term effectiveness of the cleanup action.

This periodic report shows that cleanup work remains effective in protecting human health and the environment. We may modify the draft report if new information is submitted during the comment period.

In the past, the site was a service station, repair, and sales shop for cars. Currently the site is a commercial property and this use is not likely to change in the future.

In 2005, Ecology found gasoline-range petroleum hydrocarbons in soil and groundwater at the site. The owner removed about 2,079 tons of contaminated soil and disposed of it offsite. Two underground storage tanks (USTs) were removed and three USTs were closed in place by filling with a sand or concrete slurry.

In 2012, an oxygenating compound was injected into groundwater monitoring wells to speed-up the microbial degradation of the remaining contamination.

In 2012–2013, the groundwater was monitored quarterly. Monitoring continued for at least one year. Petroleum hydrocarbon concentrations in groundwater decreased over time until contaminant concentrations either were below state cleanup levels or not detected.

In 2013, we determined the cleanup was complete and issued a letter of satisfaction for the cleanup. In 2014, we removed the site from the Hazardous Sites List.

An environmental covenant was filed for the site in 2006. Among other things, the covenant prohibits activities that could result in the release of contaminants on the site. Groundwater on the site may not be used for drinking, agriculture, or industry.

Dec. 21, 2020–Jan. 19, 2021: Interim Action Work Plan available for review and comment

Ecology is inviting public comment on a cleanup document for the Block 38 West site. The following document is available for review and comment:

Interim Action Work Plan Alley Area of Block 38 West Site – describes how the PLP will conduct a cleanup of contaminated soil in the alley, which includes the eastern portion of the site.

The Block 38 West Site is located in the South Lake Union neighborhood of Seattle and includes the West property (generally located at 500 – 536 Westlake Avenue North) and a north-south-trending East alley (Alley) owned by the City of Seattle that bisects the block into the West property and East property (535 Terry Ave North and 960 Republican Street). [ST(1)] Past uses of the West property resulted in contaminated soil and groundwater at the Block 38 West Site. Environmental sampling confirmed that contaminated soil extends beyond the eastern boundary of the West property into the adjacent Alley.

The work proposed for this Interim Action will generally consist of excavation and offsite disposal of contaminated soil and associated compliance sampling.

Shallow soil within the Alley contains the following compounds: petroleum hydrocarbons (as diesel-range and oil-range organics) polycyclic aromatic hydrocarbons (PAHs), including naphthalenes and carcinogenic PAHs (cPAHs)

These contaminants are present at levels that exceed allowable standards under the state's cleanup law, the Model Toxics Control Act (MTCA), and will be addressed during the Interim Action.

Dec. 7 2020–Jan. 20, 2021: Agreed order and public participation plan for review and comment.

Ecology has negotiated a legal agreement called an Agreed Order with Chevron Environmental Management Company and Stone Way Apartments LLC for the Chevron 209335 cleanup site.

The Agreed Order names Chevron Environmental Management Company and Stone Way Apartments as Potentially Liable Persons and requires them to develop and draft a Remedial Investigation/ Feasibility Study Report (RI/FS) and a draft Cleanup Action Plan.

Chemical remaining in the soil and groundwater from a gasoline service station include:

- Petroleum products (Gasoline, Diesel, Oil-range Total Petroleum Hydrocarbons)
- Benzene, Toluene, Ethyl-Benzene, and Xylene

We invite you to review and comment on the following documents using the link on the left:

- Agreed Order – requires the PLPs to investigate environmental conditions, complete a RI/FS Report that presents the results of the investigation and an evaluation of the cleanup alternatives. The draft Cleanup Action Plan describes how the selected cleanup alternative will be performed.
- Public Participation Plan – describes how Ecology will inform the community about site activities and opportunities to be involved in the cleanup process.

Revised Feasibility Study Report Received

On November 18, Ecology received the revised draft of the Feasibility Study (FS) Report for the Cowlitz Food & Fuel site. This document is currently under review. Ecology has not yet received the draft Cleanup Action Plan (dCAP). Following the incorporation of Ecology's comments on both documents, a combined public comment period will be scheduled for the RI/FS and CAP. The RI/FS and CAP will not be considered final until after the public comment period has been held and any necessary changes have been incorporated.

The schedule dates for the public comment period will be published in a later edition of the Site Register. Please direct questions to site manager Steve Teel.

Site soil and groundwater were contaminated by releases of petroleum hydrocarbons from past activities at a former gas station property and an active gas station on an adjacent parcel. A Remedial Investigation (RI) and FS were previously completed in 1993 and a supplemental RI was conducted in 1995. A Cleanup Action Plan to complete site cleanup was finalized in 1994.

In 2001, Ecology entered into another Agreed Order to implement new cleanup actions and continue to monitor groundwater. However, in 2005 Ecology concluded that the cleanup was not successful. Therefore, Ecology entered into a new Agreed Order in 2010 with Texaco Downstream Properties, Inc. (TDPI) to continue investigation, monitoring, and cleanup.

Due to COVID-19, site documents will not be available at repositories or by mail. If you are unable to view information on the Ecology website and have questions, please contact Steve Teel, Cleanup Project Manager or Nancy Davis, Public Involvement Coordinator.

Dec. 7, 2020–Jan. 5, 2021: Legal agreements available for review and comment

You are invited to comment on an Agreed Order and an Enforcement Order for the Taylor Way & Alexander Avenue Fill Area cleanup site. Past site activities polluted soil and groundwater with petroleum, metals, polychlorinated biphenyls, and volatile and semi-volatile organic compounds.

Several documents are available for your review and comment:

- Agreed Order No. DE 14260 with General Metals of Tacoma, Occidental Chemical Corporation, and Burlington Environmental LLC.
- Enforcement Order No. DE 19410 with the Port of Tacoma.
- A Public Participation Plan that describes how Ecology will inform the community about site activities and opportunities to engage in the process.

These legal agreements require the potentially liable parties to implement a data gap work plan and a groundwater monitoring plan, and then prepare the following reports:

- A Remedial Investigation and Feasibility Study that describes the nature and extent of contamination and compares cleanup options.
- A preliminary draft Cleanup Action Plan, which will address the contamination at the site.

You can review all site documents on Ecology's Taylor Way and Alexander Avenue Fill Area webpage.

Document review locations

Due to the pandemic in-person document review is not available.

Dec. 4, 2020–Jan. 3, 2021: Chevron 90619 Amended Agreed Order, Remedial Investigation and Delisting

Ecology invites you to review and comment on the proposed plan to amend the Agreed Order and delist the Chevron 90619 site from the Hazardous Sites List.

Gas and service stations operated on the property from about 1930 until the late 1980s. The fuel tanks, infrastructure and buildings were removed in 1991. Coffee shops operated at the location until 2015. A new tenant opened a butcher shop at the site in August 2017.

Ecology determined that the cleanup actions at the site now meet state cleanup standards.

Documents available for public comment:

- Draft Agreed Order — The amended Agreed order removes the requirements of a Feasibility Study and Draft Cleanup Action Plan from the Scope of Work. It also delists the site from the HSL.
- Draft Remedial Investigation—The Remedial Investigation concluded that contaminants in soil and groundwater do not exceed the state soil and groundwater cleanup standards.

Ecology will review and respond to all comments received. If no significant comments are received, Ecology will close out the Agreed Order.

Dec. 7, 2020–Jan. 20, 2021: Cleanup Action Plan ready for public review

Ecology invites you to review a draft Cleanup Action Plan and associated documents for the Harris Avenue Shipyard site on the Bellingham waterfront in the Fairhaven neighborhood. The plan calls for removing and capping contaminated soil and sediment, monitoring conditions, and restricting activities that could disturb capped areas.

The following documents are available for review:

- **Cleanup Action Plan:** Ecology's plan that describes the cleanup work to address contamination at the site.
- **Agreed Order:** Legal agreement between Ecology and the Port of Bellingham requiring design of the work described in the cleanup action plan.
- **State Environmental Policy Act-Determination of Non-Significance:** Ecology determination that the cleanup work is not likely to harm the environment

Investigations conducted by the port found contamination from former shipbuilding and other historical operations. The levels of contamination are potentially harmful to humans and the environment and must be addressed under Washington's cleanup law.

- **Soil and Groundwater:** petroleum hydrocarbon compounds and metals
- **Sediment:** polychlorinated biphenyls, polycyclic aromatic hydrocarbons, semivolatile organic compounds, and metals

Response to public comments available

A [Response to Comments Summary](#)³¹ is available for review on Ecology's Sea K Fish webpage.

Public Comment Period

Ecology conducted a public comment period (October 12 – November 10, 2020) on a draft Agreed Order (legal agreement) and draft public participation plan for the Sea K Fish site in the Blaine Harbor.

Final Documents

Ecology has reviewed and considered all comments received on the draft Agreed Order and draft Public Participation Plan. Based on Ecology's evaluation of the comments, no changes were necessary in the documents, and they are being finalized.

The final documents will be available on the Sea K Fish webpage.

Contamination

The contamination is the result of past petroleum storage and fish processing operations. The contaminant levels in soil and groundwater are potentially harmful and must be addressed under Washington's cleanup law, the Model Toxics Control Act (MTCA): Light non-aqueous phase liquid (LNAPL) Gasoline, diesel, and oil-range hydrocarbons Benzene, toluene, ethylbenzene, and xylene compounds (BTEX)

Remedial Investigation Report received

On December 4, 2020, we received a Remedial Investigation Report dated November 23, 2020. The site has petroleum contamination affecting soil and groundwater.

Site Register

Washington State Department of Ecology Toxics Cleanup Program

Glossary

Agreed Order - A legal agreement with Ecology to make sure a potentially liable party/parties takes specified actions under the Model Toxics Control Act (MTCA) to clean up a contaminated site.

Cleanup Action Plan (CAP) - A document that describes the selected cleanup methods and specifies cleanup standards and other requirements. It is based on information and technical analyses generated during the RI/FS and consideration of public comments and community concerns. We make a draft of the CAP (dCAP) available for public review and comment before finalizing.

Comment period - A time period during which the public can review and comment on various documents and Ecology or EPA actions. For example, a comment period is provided to allow community members to review and comment on proposed cleanup action alternatives and proposed plans. Also, a comment period is held to allow community members to review and comment on draft feasibility studies.

Consent decree - A formal legal agreement that is filed with a court. It describes studies and/or cleanup work to be done at a site and the terms under which that work is to be done.

CSID (Cleanup site identification) – a tracking number assigned to a known or suspected cleanup site.

Delisting/delisted – the process of formally removing a site from the Hazardous Sites List.

Enforcement order – A formal legal order to force a potentially liable party/parties to take specific required cleanup actions when negotiations toward an agreed order are unsuccessful.

Engineering design report - Engineering design reports outline the specific details for implementation and operation of the first phase of the cleanup actions.

Formal cleanups - TCP conducts or supervises formal cleanups (also called formal oversight) when site owners are under court order or decree, or when cleanups are funded by legislative initiatives. Formal cleanups will meet MTCA

standards. The public can provide input during public meetings and comment periods.

FSID (Facility/Site identification) – a tracking number assigned to a facility, business, or location.

Hazardous Sites List - A statewide list of contaminated properties. Ecology may remove a site from the list only after determining that all remedial actions except confirmatory monitoring have been completed and compliance with the cleanup standards has been achieved at the site, or the listing was erroneous.

HOTAP – Heating Oil Technical Assistance Program administered by the Pollution Liability Insurance Agency (PLIA)

Independent cleanups - Property owners conduct independent cleanups on their own, or with help from our Voluntary Cleanup Program (VCP). Independent cleanups still meet MTCA standards, but property owners set their own timelines. Owners can ask for our help through the VCP but do not have to. Ecology will hold public meetings or comment periods if a site needs to be de-listed.

Independent cleanup action - Any remedial action without department oversight or approval and not under an order or decree.

LUST - Leaking Underground Storage Tank

NFA - No Further Action

PAH – Polycyclic aromatic hydrocarbons – a class of organic chemicals from petroleum, organic materials, and the combustion of hydrocarbons. They are carcinogenic (cancer-causing) and linked to cardiovascular and developmental diseases.

PCB – Polychlorinated biphenyls – a group of manmade chemicals that are toxic, potentially carcinogenic, persistent, and bio-accumulative. They are classified as persistent organic pollutants, meaning they do not easily degrade in the environment.

Periodic review - A periodic review is conducted at least every five years at sites where some contamination remains.

Site Register

Washington State Department of Ecology Toxics Cleanup Program

The purposes of the review is to evaluate whether the cleanup still protects human health and the environment.

PLIA – Pollution Liability Insurance Agency

Potentially liable party (PLP)– A person, business, or entity that is potentially liable (legally responsible) to clean up a contaminated site. If there is more than one PLP, all parties may be jointly and severally liable.

PTAP – Petroleum Technical Assistance Program administered by the Pollution Liability Insurance Agency (PLIA)

Public participation plan - Outlines and describes the tools Ecology will use to inform the public about site activities, and it identifies opportunities for the community to become involved in this process.

Remedial action - Construction work done to clean up a contaminated site.

Remedial investigation/feasibility study (RI/FS) - Two distinct but related studies. They are usually performed at the same time.

SEPA - State Environmental Policy Act

Site – also called a cleanup site, is a property or location with suspected or verified contamination that must be cleaned under the Model Toxics Control Act (MTCA). A site does not necessarily stop at property boundaries, but is defined by specific contaminants, the extent of contamination, or both.

Site Hazard Assessment (SHA) - An assessment to gather information about a site to confirm whether a release of hazardous substances has occurred and to enable Ecology to evaluate the relative potential hazard posed by the release.

Total petroleum hydrocarbons (TPH) - A term used to describe a large family of several hundred chemical compounds that originally come from crude oil. TPH is a mixture of chemicals made mainly from hydrogen and carbon.

UST – Underground Storage Tank

Voluntary Cleanup Program (VCP) - The VCP is one of several options for cleaning up a site under the state's cleanup law. Under this option, property owners perform a cleanup independently and request services from Ecology for a fee.
