Document review locations:

In consideration of public health and safety, Ecology cannot offer in-person review options at this time. Please refer to the Site webpage above. If you need document review assistance, please contact Brad Petrovich at 425-533-5537

Facility Site ID: 4377754

Site Cleanup ID: 14495

Legal agreement ready for public review and comment

Ecology has negotiated a legal agreement called an Agreed Order with Onni for the Seattle Times Cleanup Site (Site). The order names Onni as a Potentially Liable Person (PLPs) and requires them to address contamination at the Site. We would like your input on:

- **Agreed Order** – legal document that requires the PLP to investigate environmental conditions, complete a Remedial Investigation (RI) and Feasibility Study (FS), and a preliminary draft Cleanup Action Plan (dCAP) for the Site.
- **Public Participation Plan** – describes how Ecology will inform the community about Site activities and opportunities to be involved in the cleanup process.

Site Background

Seattle Times site is located at 1120 John Street in Seattle. Seattle Times first began operations at the facility in 1931. While in operation, the facility included at least 11 underground storage tanks (USTs), which contained a range of compounds including waste oils and liquids, heating oil, diesel fuel, gasoline, and petroleum- and solvent-based inks.

Seattle Times ceased operations at its 1120 John Street facility in 2011. In 2013, Onni John Street (Land) LLC (Onni) purchased the former Seattle Times facility from Seattle Times.

Seattle Times Site Location in Seattle

Site Investigation and Contamination

In 2012 and 2013, Environmental Partners, Inc. (EPI), on behalf of the Onni Group, performed a limited subsurface investigation at the Seattle Times property.

In 2018, EPI collected additional data to assess the vertical and horizontal limits of contamination previously identified in 2012 and 2013.

In 2020, Onni submitted a draft Remedial Investigation Report to Ecology, which Ecology reviewed and then provided comments. Onni collected additional data in 2020 independently without Ecology’s oversight.

These investigations documented the following hazardous substances in soil and/or groundwater in amounts that exceed minimum allowed levels under the Model Toxics Control Act (MTCA):

- total petroleum hydrocarbons
- polychlorinated biphenyls (PCBs)
- tetrachloroethene (PCE)
- trichloroethene (TCE)
- vinyl chloride (VC)

What happens next?

Ecology will consider all comments received and may amend the Agreed Order or Public Participation Plan based on them, and hold another public comment period if the documents require significant changes.

If no changes are made, Ecology will finalize the documents, and the PLPs will proceed with the RI, FS, preliminary dCAP, and any interim cleanup actions.

Each of those steps will require a public comment period (see Ecology’s Cleanup Process figure below), and steps may be combined into one comment period.

If ten or more persons request a public meeting about this Agreed Order and Public Participation Plan, Ecology will provide notice and host a public meeting.

Due to the COVID-19 emergency, Ecology is hosting public meetings *online* until such time as it is deemed safe and appropriate to host physical meetings again.

Ecology’s cleanup process

The Model Toxics Control Act ([MTCA](#)¹) is Washington’s environmental cleanup law. It provides requirements for contaminated site cleanup and sets standards that protect human health and the environment. Ecology implements the [MTCA cleanup process](#)² and oversees cleanups.
