

Prevent asbestos exposure during dry weather

Swift Creek and downstream Sumas River carry asbestos from the Sumas Mountain landslide. In dry weather, sediments containing asbestos pose a hazard.

AVOID walking, driving, cycling, riding horses, or disturbing the riverbed or dredge piles

along Swift Creek and Sumas River, or where flooding may have left deposits.

- When disturbed, asbestos fibers in the dry sediments can become airborne.
- Airborne asbestos can be inhaled and potentially cause health problems.
