

Quarter 2, 2023 Data Summary

Clean Fuel Standard

This report is a summary of the total number of deficits and credits generated by program participants during quarter 2 of 2023 and is generated using data submitted by program participants. For this reason, there may be changes to the data as Ecology continues to work with regulated parties on corrections to their initial reporting. The aggregated quarterly data for the program is also posted in an Excel format on our website.

Figure 1 shows the number of credits and deficits generated. Credits are generated by fuels whose carbon intensity falls below this year's target, while deficits are generated by fuels whose carbon intensity is higher than this year's target. 350,219 credits were generated in the second quarter versus 227,930 deficits.

Figure 1. Total number of credit and deficits generated during Q2 and the metric tonnes of CO2 they represent.

Figure 2 shows the breakdown of credit generation by fuel type during the second quarter. This data does not include residential EV charging.

Over 90 businesses reported to Ecology in the second quarter of 2023.

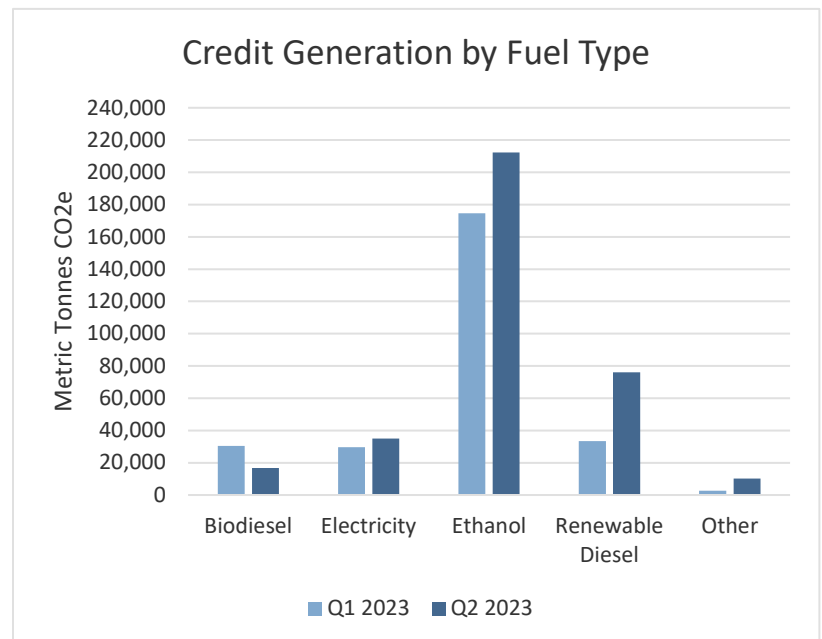

Figure 2. Fuels reported in the second quarter with a carbon intensity below the 2023 standard.
