

Weyerhaeuser West Cleanup Site

**Periodic Review Report available for public comment:
12:00 a.m. July 14 – 11:59 p.m. August 12, 2025.**

The Department of Ecology (Ecology) completed a third periodic review for the Weyerhaeuser West Cleanup Site (site) at 101 E Marine View Dr. The site is located next to the Snohomish River in Everett. Total petroleum hydrocarbons (TPH) are the primary contaminants on the site, but there is also arsenic, chromium, mercury, and polychlorinated biphenyls (PCBs) in some areas.

Weyerhaeuser began operations in Everett in 1902, and the site included former lumber and pulp mills. The site was split into areas for uses such as pulp processing, fuel storage, sandblasting, and chip storage.

Cleanup of this site includes a Restrictive Covenant intended to prevent exposures to remaining contamination. The periodic review found that the existing remedy may not fully protect human health and the environment due to incomplete land use restrictions, inaccurate documentation of contaminated soil areas, and potential risks from uncapped contaminated soils.
